Hey Jim!

Have you ever been to one of those family functions where there was an obnoxious 5 year old that would constantly interrupt the adults with irrelevancies while thay were trying to have a conversation?

Actually, most all the people in here are okay IMO. Some of us have an unusual take on things, and we're all kind of fiesty, but I would enjoy meeting any of them over a beer. That's the spectrum from Len to Larry.

I believe it. My xyl makes fun of the way I even try to pronounce the language (very, very poorly and apparently amusing). So I seldom try.

Really? Maybe you should talk to the emergency officals in NYC about
hams and 9/11.

How is it that you misspell my name in one fragment sentence, and
spell it correctly in another?

> So WHY do YOU inisist on following the insulting and demeaning
> example of a known pathological liar and antagonist in engaging in any
> interaction with him...?!?!

Stebe, you misunderstand (what's new?).

I am the ONE who has tagged N2EY with the title "TAFKA Rev. Jim" after
his dishonesty in altering Kim's posts. He previously put forth the
image of being as pure as the driven snow. But after that little
stunt, he can no longer be referred to as Reverend Jim. So, "formerly
known as" sounded good to me.

You got a problem with it?

> Are you, after all, as shallow and immature as I thought you
> really are?

No. Perhaps even more so. Perhaps almost as much as you are.

> Please give some specific example of how Jim has belittled or
> demeaned YOU in a like manner...

>No need to. Everybody who cares knows what it means. Do they advertise that
>ketchup has tomatoes in it?

IIRC both the name brands that we use and the generic ones (probably
bottled on the same line as one of the name brands) use the words
"Tomato Ketchup".

Go to the Southeast Asian food section of your local supermarket and
you will find bottles that look like "ketchup" bottles but contain
red stuff that is just this side of liquid C-4, especially the one with
the rooster on the label (Saribachi ??).

Go to the Campbell's Soup shelves. Vegetarian Vegetable Soup -
Kosher. Vegetable Soup with Beef - Not Kosher. Tomato Soup - Kosher.
Chicken Noodle Soup - Not Kosher. Bean with Bacon Soup - Not Kosher.

Prime example of "pushing" the manufacturer? The vast majority of
their soups are not kosher. Nobody is picketing the Campbell Soup
Company over that - either way.

All this talk about kosher food is making me hungry.... <ggg>

"Pareve" is a subcategory of "kosher" and indicates that there are
no meat products OR dairy products involved. Totally vegetarian,
but not necessarily vegan.

Products which are inherently unprocessed vegetarian - fresh fruits,
grains, vegetables - do not need specific certifcation.

>Perhaps this is the chance for you to make some money here. You could
>start a food chain called "Stewart's Non-Kosher Foods"! 8^)

Why not - Jimmy Dean and Oscar Meyer made a fortune doing just
that..... <ggg>

And that famous (now absorbed into a major chain) supermarket chain
in Southern California - Iowa Pork Shops. They carried quite a few
"K"-labelled foods, too <ggg>

>btw, gefilte fish is really really good. It is an "inverse" food - its taste is
>inversely proportional to how it looks. I ate some on a dare and then I
>couldn't get enough of the stuff.

Gotta have prepared horseradish with it - one famous brand (from
Missouri, IIRC) was "Atomic" -- aptly named. About the same
sinus-clearing properties as good daikon.

Chinese ethnic kitchens (in big city Chinatowns, that is, not local
"chinese" take-out restaurants) make an identical dish usually sold
as "fish balls". Slightly different taste.....in the showcase right
next to the boiled chicken feet.

IIRC every jurisdiction in this country is obliged (sometimes very
grudgingly) to allow a witness or affiant to "affirm" rather than
"swear" - no bible, no "so help me God". Gotta' ask for it, though.

>What is surreal about the whole issue is that it was usually one flavor of

Every religion has this problem. Consider the strife between the
Shiite Muslims and the Sunni Muslims, the internal differences between
the traditional, centrist, and liberal movements of Judaism, or the
Catholic versus Protestant strife in various parts of the world.

Maybe that particular group insists that their slaughterers be ordained rabbis, but there is nothing in religious law that requires it. I served on a committee that examined the specific qualifications of slaughterers and supervisors and with several exceptions, the individuals were not ordained rabbis even though most had the experience to so qualify.

As distinct from other religions, there is no religious function that requires the presence or services of a rabbi. The function of a rabbi is to teach and mediate between parties on issues of religious law. A lay person can conduct services and serve as a witness for religious ceremonies and certifications.

SOP for Quakers.

>>What is surreal about the whole issue is that it was usually one flavor of
>>Christian telling another flavor of Christian what to do, and often doing it in
>>the name of the One they supposedly follow.

Kind of like the people that initiated the football prayer issue in
Texas. THey were not Moslem, atheists, agnostics or Wicca for that
matter. They were Catholic. The difference between the Catholic and
Protestant version of the Lord's prayer, you know. And I'll wager that
the Catholic players on the team had to use the Protestant version, or else.

What I know about human nature tells me that if there were only two
religions in the world that were identical with each other except for
one word in their scriptures, there would be many that would be happy to
destroy all the followers of the other religion for that one word.

I call it Coke vs Pepsi syndrome. The closer the product, the more
intense the competition, and more intense the animosity.

Such as your incessant use of "Brain" instead of using my name?

And now you want to call me on the carpet for using TAFKA Rev. Jim???

You just renewed your membership in the KMA Club.

13. Wurlitzer P-10 lighting

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-01 04:05:11 UTC
From: BH <radiobill#@#gbronline.com>
Message-ID: <2dKdnWX1c6joId_dRVn-gQ@gbronline.com>
Source record: 88077

I am restoring the above jukebox and have a question about the lighting.
There are four Mazda GE Lumiline 40 watt lamps mounted behind the
speaker grill. The wood strips holding the lamp sockets and wiring do
not look to be original. Can anyone tell me if these lamps were
orginally mounted between the speaker and the grill, or somewhere else,
like in the record compartment on the back wall maybe?

Thanks,
BH

^^^^^^^^^^^^^^^^^^^^^^^^^^^^
Wrong. Although I shall agree that it does not establish any specific religion,
it leaves out those religions that either have no supreme being or multiple ones
and those who have NO religious belief at all. It's still an endorsement of
[some kind of] monothestic religion by the U.S. Government even if not specific
to any that currently exist. The presence of the phrase itself is a violation
of the separation of Church and State - and the court was correct in finding so.
ANY endorsement of religion, whether specific to a particular belief system or
in general, is a violation of the separation.

> believe in a God, no religion is established. Specific government

It's not banning any religion. It does ban government ENDORSEMENT of religion.

> offered instant restests.

As a volunteer examiner, I can say that our group generally offers retests (a maximum of three attempts at any one session permitted - and we do have MORE than three versions of each test) but we sometimes limit it to when someone is "close" to the minimum passing grade (where we think that the candidate might pass). For written tests, about 3 wrong (5 for element 4) beyond the minimum score is what we seem to judge on. Very rarely do we find someone who is that close fail a total of three times (but it did happen in a session about 4 months ago when one guy consistently had 25 of 35 [26 is passing] on element 2).

Unless the stadium were paid for by taxpayer money, such a display wouldn't
matter. It's not society's endorsement of religion that is a problem (such is
not); it's the government's endorsement that is.

If the "mount" is either private land or non-government public land, not a
problem.....

Sorry. Only been there once (pulling Sneed, Trott, and I forget the third), and I had someone else handle the appeal. In general, I don't pay attention to the way that individual judges rule - but to the court as a whole.

One thing that I have heard from alot of practicing trial attorneys: The [federal] court judges seem to be making (what these attorneys call) more "bad" rulings. I've seen a case or two where a judge decides to assume a fact not in evidence that is contradicted by facts that are. I've never seen that at the state/local court level, not even from "county commissioners" filling temporarily vacated court seats (which is allowed in my state). I have to wonder if the fact that federal judges are appointed vs. their state/local counterparts which are elected has something to do with it.

Huh? Morse code IS a lawful mandate. It's just not an INTERNATIONAL mandate anymore - which means that it CAN be removed as a [national] mandate; whether or not it should be is the question that all the petitions argue and seek the answer of.

What does the actions of private companies have anything to do with this?

Although now off topic (but a related one), it is the action of the U.S.
Government, or any political subdivision, that is the issue - the ONLY issue.

And by the inclusion of "under God," you identify that country as supporting of ONLY monotheistic religion(s), which is simply not true. The First Amendment does not limit the practice of religion to only monotheisic ones.

Wrong group. Try "rec.radio.cb".

Regardless, only the FCC has the ULTIMATE authority over radio services. There has been a recent change in the law authorizing state/local law enforcement some actionable authority, but if you are completely within the rules, then only the FCC's action matters.

It's not its voluntary element that matters. It's the fact that it is a
government-related pledge that creates the problem with the words "under God"
being present therein.

That's got to be the lamest thing I have ever read; however, considering who wrote it, not totally unexpected.

Pledging one's self to anything is basically the same thing as taking an oath. [Granted: My dictionary defines an oath as a promise to fulfill a pledge, but for our purposes here, there is no significant difference.]

One is pledging one's allegiance to the USA - an act of government support by its citizens - and in that same oath, recognizing monotheism. That's certainly not separating "church" from "state."

And then we have the Buddists (and/or any other religious group like
"Scientology") who was left out sue the Government for recognition of all
religions except theirs, and as a result, we add more days to the week! :-)

> They all mean the same thing (except for Monday) so why not?

Varying the religion does not make it "religion neutral."

Which smacks of unconstitutionality just as much as including "that" phrase in the PoA, just because of the final word. The last (and only) time I was before the Tax Court (while sitting in a state appealable to the 9th Cir.) since the appelate ruling, I thought about objecting to the witness' oath but decided not to since the Court had no provision for an alternative oath and I needed the testimony. However, just because I didn't object doesn't mean that I didn't have grounds to - it's just that I didn't find it material to the case.

No, what I'm saying is that they're free to believe what they want. That's always a good test for great words - that many can see different things in those words. If some want to believe it's a prayer, more power to them. But that doesn't mean your or I have to see it that way. The same with the word "God." There are many different gods. Some might argue about the word "republic." Others might argue over what constitutes "liberty." The same with the word "justice." Hopefully, we don't start wiping out words simply because some argue over them. If we did that, we would soon have no words left to say.

> Maybe we've beat this subject to death? 8^)

We've have both certainly made our points by now, which means it's probably a good time to end it.

True. Even if it is funded that way, which all the school stadiums are
to my knowledge, there is no government prohibition to spontaneous
prayer. If a group of people suddenly decide to say The Lord's prayer,
than they are free to do it.

In this case, when people were being canvassed to descend upon the
stadium from all over the state, it becomes pretty hard to call it
spontaneous.

I don't really have a problem with spontaneous prayer. I do have a
problem with a group of people who profess to be of good moral character
purposefully descending on a stadium to have a "spontaneous" prayer.
Were the ten commandments suspended that day, and it was okay to lie?

Be my guest. Of course, don't necessarily expect a response. I also hope you offer more than the few exceptions others have offered (bacon for breakfast hardly replaces the roast pork or ham dinners available in most resturants just a few decades ago). Likewise, an exception here and there is not going to change the overall picture I've painted (those who've been around long enough to remember the amount of pork available years ago will know exactly what I'm talking about).

> This isn't the first time you've

You know, this all started with Phil talking about a religion other than his own "jamming one form of religious practice down the throats of others." Nobody called him "a racial and and religious bigot." In response, this (Kosher food) was offered as an example of what some in his own religion were doing to jam their religous practices "down the throats of others." Given the context, I think it was a perfectly ligitimate response.

As for your claim that I'm a bigot, I suggest you look up the word "bigot" (a person intolerant of any opinions differing from his own). Only a true bigot could possibly call another person a bigot.

Dee,

Something that many folks do *not* understand is that cell-phones are not the do-all, end-all for everything. There are areas not served by them (or poorly served). That infrastructure can come down in a hurry as well. Even here in Rochester, a friend of mine has a cell-phone only. He uses that rather than a wired phone. In parts of his house, communications die. When he is on the street (all of this - his house and his walking), his phone often looses communications. I hate it when he calls as 1/3 of the time or more, we get cut off and he has to move around and try again. I could be right next to him and have my choice of over a dozen repeaters on 440 alone, phone access included LOL.

BTW, there are repeaters in the area that are *not* tied to the power company. One is solar powered; another wind-mill powered. Besides, many have battery backup or generators available as well.

You're right, the trolls don't want to go away; they'd rather have an amateur license included free in a box of cracker jax - and then complain about having to buy the cracker jax :))

Dave,

I *like* your idea. Makes more sense than code vs no-code arguements. Do so many hours per year or you loose the ticket. After so many years of having the ticket, you get a free pass once you are 65 years of age ;)

Hi, Mike, Dwight, ... dont recallall the others so lets say:

Hello newsgroup!

I am ANGRY with you all. Disapointed, frustrated, you all are guilty of that.

When I clicked on the post first, I expected a decend discussion about SEX.

Can you Imagine me sitting in front of the screen, the drivel foaming out of my wide open mouth.

Called my significant other and told her to sit down beside me, to see what exciting stuff will be written in this great newsgroup.

What a disgrace!

At the beginning: just a little thing about homophilian marriage, thats all. That was the SEX?

I opened every post on this thread, and what came: No Bum, No Boobs, No cute guys (for the YL's), no Athletic girls and guys whatsoever.

Instead, Koscher food, pledges for religious societies or other groups of people, Ketchup bottles and Cans of Beans. Pledges for Pork (I could go with that) Beef, Turkey(no, not the country) and all of course slaughtered by a rabbi or a slaughterer.

The more I write, the more I am getting more angry.

YOU all promised a decent SEX discussion, and now everyone can satisfy his desires with lots of food or prayers.

Be ashamed!

Stand in the corner!

Be ashamed!

Knee down!

Pray:

I will never do it again!

Promised!

Huuuh-I cant believe that.

See you all on the next totally oftopic thread.
Nobody cares, if there is any connection of all the above said to amateur radio.

I LIKE IT

HAPPY POSTING

Helmut

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of February 29, 2004:

Novice - 32,487 (decrease of 16,842)
Technician - 261,050 (increase of 55,656)
Technician Plus - 61,644 (decrease of 67,216)
General - 141,144 (increase of 28,467)
Advanced - 81,455 (decrease of 18,327)
Extra - 105,075 (increase of 26,325)
Total - 682,855 (increase of 8,063)

>Nobody called him "a racial and and religious bigot."

Because he wasn't. He pointed out a specific action (certain words in the POA).

>In response, this
>(Kosher food) was offered as an example of what some in his own religion
>were doing to jam their religous practices "down the throats of others."

Apples and oranges. A person who doesn't want to eat kosher-certified foods can avoid them easily. Avoiding the POA is more difficult, particularly if you're a kid in certain public schools.

>Given the context, I think it was a perfectly ligitimate response.

Two completely different things. And no evidence on your part.

Let's journey back in time to 17 January 1994 and the Northridge
Earthquake. ALL the primary electrical power to about 10 million
was shut off by a single falling MHV tower at a little after 0430..

That's as close to a "terrorist act" as is possible without being caused
by terrorists.

Did the LAPD or any other police department in the affected area
become inoperative? No. Their communications facilities at fixed
or 'home' bases had emergency power...patrol cars could talk to one
another.

Did the LAFD or any other fire department in the affected area get
cut off? No. Their alert and alarm signalling to fire stations is
independent of communications carriers and their dispatch stations
had emergency power. Individual fire engines could talk to one
another.

I was able to look down into the now-black eastern San Fernando
Valley and see a house fire start. A local LAFD fire station's engines
answered and doused it. They were alerted through the independent

alert and alarm system (learned that later) and that station was not able to see the fire about two miles away. The fire was quickly extinguished.

Did the hospitals or ambulance services in the affected area get cut off? No. They too had, and still have, emergency electrical power.

Did the utility companies get cut off? No. They had emergency power and utility vehicles could talk to one another.

Major taxicab services and large businesses with mobile communications had emergency electrical power.

Was there any amateur radio operating during the first few hours of total primary electrical power outage? I don't know, was too busy to monitor. Nothing was reported in any of the newspapers or many broadcast stations then or in the following three days. There are several amateur radio repeater sites in this general area, including to long-running Condor Net on the 220 band (totally independent).

There's a curious mythology sprung up saying that "all the CELL phones will go down" during a major emergency. While that is universally true going INTO a cell, it isn't always true GOING OUT from a cell. Most individual pagers are separate from the telephone infrastructure here and most of those transmitters had emergency power. The landline telephone in most urban areas of the USA isn't locked totally into the switching centers' dialing routing...those CAN be entered through other paths known only to the telephone companies so that an official can alert individuals in residences to report in. That was done.

The possible routes of common communications in any urban area in the USA are quite complex and don't depend solely on either cell phones or the automatic dial switching centers. There exist ways to communicate between areas that aren't in common use such as the many business data linkages using microwave radio or leased, fixed landlines. Those in the emergency planning and operations in this area know about those facilities. They also plan and execute drills and procedures for handling emergencies of many kinds, including the worst-case scenarios of "terrorist acts."

>BTW, there are repeaters in the area that are *not* tied to the power
>company. One is solar powered; another wind-mill powered. Besides, many
>have battery backup or generators available as well.

Most of the Condor Net was that way a decade ago. [it stretches over most of the length of California - considerable - with links to two other states] But, repeaters are no good if no one accesses them.

>You're right, the trolls don't want to go away; they'd rather have an
>amateur license included free in a box of cracker jax - and then complain
>about having to buy the cracker jax :))

That's another myth...that one has to work and slave at amateurism in order to be a "proficient communicator"...treating it like the profession is is NOT.

A half century ago, I and other GIs were doing professional-level HF, VHF, UHF, and microwave communicating on a much larger scale than any amateur radio effort...all without having to take any license tests in order to receive a personal callsign. In the time since, tens of thousands of signalmen in all branches have done the same.

All of us no-code-test-advocates want is some sense and sensibility in the federal regulations regarding amateur radio licensing. Amateur radio is NOT a profession, NOT a guild, NOT a union, and NOT any sort of "emergency communications service." NO ONE NEEDS to work and slave and show dedication to "fellow servicemen" for any sort of hobby radio activity.

If you and other PCTAs want to demand adherence to old, outdated standards and practices, fine, do so. But, stop and think about what you all are doing...all that is is just trying to force all to meet the standards that you all had to meet long ago. If you call all the NCTAs for "trolls," then I call all the PCTAs for elitist, selfish, egotistical, anal-retentive, ignorant amateurs who are trying to make their little part of the EM spectrum a private playground for their own dreams of imaginary glory.

Rest of lenny's senile drivel deleted:

So based on this one incident you declare that hams have no use in emergency communications. Lenny, you are dumber than a bag of hammers.

Journey back to the quake of 1985, when there was no, none, nada, phone service into or out of SF for a period of time, and only sparodic service locally and see what service the hams were providing not only for local emergency agencies but also handling traffic into and out of the area via HF.

Now go take your meds and and hassle the little old ladies in your rest home.

No, but it is one of MANY in which radio amateurs have NOT
helped in the glorious, noble, and heroic services claimed by the
mythmakers and amateur propagandists.

The Northridge Earthquake was a mere 10 years and 2 months ago.
It affected about 10 million people from the TOTAL absence of
primary electrical power.

>Lenny, you are dumber than a bag of hammers.

Poor baby, using a mixed alliteration. That would prove you are
an illiterate alliterator. :-)

>Journey back to the quake of 1985, when there was no, none, nada, phone
>service into or out of SF for a period of time, and only sparodic
>service locally and see what service the hams were providing not only
>for local emergency agencies but also handling traffic into and out of
>the area via HF.

Of course they were...in your mind.

The Loma Prieta quake was 19 years ago. More severe in Richter
Scale numbers than Northridge, like the Northridge quake it affected
only certain portions of the Bay Area. It was NOT a total collapse
of the infrastructure by any means. While parts of the Bay Area were
without electrical power, the Area was still connected to the Pacific
Intertie.

Unlike Loma Prieta, the entire Los Angeles area was cut off from the
Intertie at a bit past 0430 hours. The Greater Los Angeles area
went BLACK. No lights, nothing, nada, nyet, nicht except were the
emergency generators could supply local lighting. The Loma Prieta

quake started during daylight.

If the infrastructure was so "immobilized" by Loma Prieta, then
explain all the television coverage from the ground as well as the air.
Saw quite a bit of damage in rather widely-scattered areas down
here. Not only that, I called to the area using POTS and got through
normally a few hours after it started.

While you desperately desire to keep the Myth of telephone service
collapsing entirely alive, that isn't true either. While IN an affected
area, the limitations of switching centers don't allow free calling all
around. However, one can call in from OUTSIDE the area. Obviously
the infrastructure was NOT helpless or "down."

During the Northridge quake, I got a call from a relative in Florida
during the afternoon, once again proving one can call in from the
outside even if the switching centers are swamped to calls WITHIN
an affected area.

Throughout both earthquakes the public safety and utility and
construction-wrecking companies were in constant communications
with each other and the various local governments. Their only
overload was dealing with the WORK of rescue and clean-up. They
had no real problem of communications.

>Now go take your meds and and hassle the little old ladies in your rest
>home.

I take my 0.5% Timulol Maleate regularly in the morning and after
supper. As prescribed.

I don't live in "the med" nor in any "rest home."

You dwell in anonymity, without the courage to identify yourself.

Are you hiding that alleged callsign because you have NO
amateur radio license? Certainly appears that way to everyone.

You are an UNKNOWN as well as cowardly troll, too ignorant of the
world and fearful of that world finding out your true incompetence.
But, your imagination must think you are a Great Hero, a Noble
Communicator Serving Your Nation for having a radio hobby. :-)

Now, go back to dreaming of your glory of selfless dedication to
your community. You don't have it but you can't admit it...

For a period of several hours, there was no phone service going IN or
OUT of the area.

Blah, blah, blah, more lennie blabber deleted:

It really chaps your butt that hams have for decades been able to
provide all kinds of ememgency communications when other means fail,
much to the satisfaction to emergency officials who still rely on hams
in emergencies, doesn't it lennie? And you can't be a part of it because
you have no license and can't pass the test to get one. The Office of
Homeland Security thinks enough of hams being able to handle emergency
communications that they are including ham radio in their emergency plans.

Now go back to the rec room of your rest home and see what the other
residents are doing, maybe you can get into a game of strip checkers or
something to take you mind off of your inability to get a ham license.

> muscle, usually due to cardiovascular disease or a thrombus of other
> etiology, even trauma.

It is very difficult to interfere with today's pacers, and interference to one isn't going to cause a myocardial infarction. A story about pacemakers and hams.

A ham friend lived across the street from a person who wore a pacemaker. The ham had been on the air, on HF and VHF, for some years without even knowing the across the street neighbor wore the device. The ham had never had a complaint of any kind of TVI or any other type of interference from any neighbors. The neighbor purchased a cheap TV and one day noticed interference, someone told him it might be the ham across the street. He went to see the ham, the ham took his own portable TV over to the neighbors and ask the neighbor to use his set for a few days to see if there was any interference. The ham operated on all HF bands and his usual VHF frequencies for a couple of days and no inteference occured to the hams TV but did on the neighbors. The neighbor was convinced it was his TV and returned it to the store. End of story right? Not quite. The neighbor, on a visit to his cardiologist, happened to mention the ham and the inteference problem. The doctor got all excited and told the patient that that ham's signals could interfer with his pacemaker and possibly kill him. Now the ham had been operating for years and there had never been a hint of a problem, but now his signals may suddenly kill this guy.
On advice of the doctor, the neighbor called the FCC. The FCC got envolved and came out and made checks and measurements of the hams stations and gave it a clean bill of health. The neighbor, knowing he was going to die if the ham operated, was not satisfied and demanded the

FCC put the ham off the air. The FCC refused, so an engineer from the pacemaker manufacturer was called in. They took an indentical pacemaker, laid it next to the hams station, strung the leads out, operated the station at power levels from very low to full legal limit, and was never able to observe any interference to the pacer from the signals. They repeated the same test at the neighbors location and no matter what they tried they could not get the hams signals to interfer with the pacemaker.

That was over 25 years ago. Pacemaker technology has improved vastly since then. My wife wears a pacemaker and shortly after it was installed I had a conversation with one of the St. Jude (the manufacturer) engineers on the subject of interference. He said it would be very difficult for my ham transmissions to interfere. I ask what would be the consquencies it it did. His answer was that when the pacer detected any interference it would simply stop pacing until the interference went away. The effect on the wearer would be the heart would slow down to whatever its own pacing rate was (in my wife's case between 30-40 beats per min), and she would probably feel dizzy, lightheaded, out of breath, or if her rhythm were slow enough, maybe pass out, but once the interference is gone, the pacer would pick up and pace her at 70 the rate it is set for.

So lennieboy, get your facts straight, some ham or any other transmitter near a pacemaker wearer isn't going to cause them to suffer a heart attack, as much as you would like to think it would so you could blame all those nasty hams for killing people. If it were so, then pacemaker users would be dropping all over the place everytime a police car went by with the officer on the radio, or when they passed a high power broadcasting tower or any number of scenarios. They don't even tell pacer users to beware of microwave ovens anymore.

Now back to you room lennie and let some other resident of the home use the computer, the nurse is waiting to give you your meds.

The familiar, shortened form of the word doesn't pronounce the T.

Doctor Killgore, the gunnery nurse, still can't sign "MD" behind
her name. She isn't licensed to practice medicine without a
real physician in charge. She will object strenuously to that in
more tuff tawk, but that is to be expected.

The gunnery nurse still can't legally put "MD" behind her name.

>It is very difficult to interfere with today's pacers, and interference
>to one isn't going to cause a myocardial infarction. A story about
>pacemakers and hams.

That is irrelevant coming from a NOBODY, an ANONYMOUS
troll who doesn't have the guts or the heart to identify herself.

Go ahead, make our day, put a pacemaker wearer right next to
a mismatched 1 KW transmitter connected to an antenna with
open-wire lines. Do you want to "experiment" with something
that might kill a person? Would the gunnery nurse do that?

You both would, of course, at least in messages. You guys are
TUFF, strong, noble, good, and true, know everything (and know
hardly anything). :-)

>So lennieboy, get your facts straight, some ham or any other transmitter
>near a pacemaker wearer isn't going to cause them to suffer a heart
>attack, as much as you would like to think it would so you could blame
>all those nasty hams for killing people.

I'm not blaming "all those nasty hams." :-) Just the PHONIES
with federal merit badges in here who think they are all gunnery
nurse candidates in search of a real self. :-)

>Now back to you room lennie and let some other resident of the home use
>the computer, the nurse is waiting to give you your meds.

Only in your fevered imagination ANONYMOUS ONE. :-)

My home IS restfull but only my wife and I (and three cats) live here.
Nice 2000 square foot place in the hills. No "nurse" in attendance.
That's just the southern house, the one in California, the same postal
address in all those Ham Radio magazine bylines. The northern
house on the Puget Sound is even more restful...same size but nice
pines all around...only two pines down here but 14 tall cypresses.

Good health here, no heart problems. :-)

I only counterattack the FAKERS, the ANONYMOUS trolls, the
PRETENDERS, the GUTLESS ones who imagine they are radio
amateurs of great toughness and resolve and superior to all others
yet HIDE behind a pseudonym, AFRAID of truth.

YOU fit all those categories, "JJ."

Now be good, little "JJ" or Mama Dee will spank you and take away
your computer privileges until grade school is over for the summer.

Not at all. That hasn't been proven to the general statement you
make.

You desperately WANT your statement to be true but it isn't.
Therefore you act tuff and try to bluff others.

First of all, you don't give any amateur radio license callsign,
therefore all must assume you are BOGUS. A fake. Charlatan.
Poseur. A nobody trying to be a somebody. No body at all.

>And you can't be a part of it because
>you have no license and can't pass the test to get one.

Irrelevant to "Ham Radio Is A Hobby Not A Service."

I have a commercial license. Had it since 1956. An amateur radio
license - which you DO NOT VERIFY AS YOUR OWN - takes less
knowledge to pass than the old First Class Radiotelephone
(Commercial). You seem to forget that the Question Pool is open
to inspection to the public.

>The Office of
>Homeland Security thinks enough of hams being able to handle emergency
>communications that they are including ham radio in their emergency plans.

Oh, my! OFFICIAL recognition? :-)

Has Part 97, Title 47 C.F.R. been changed since that agency was
created AFTER 11 September? :-)

Is U.S. amateur radio primarily an emergency communications service
under Homeland Security? No? Why not? All you noblemen seem
to think you all deserve medals for having fun in a HOBBY.

>Now go back to the rec room of your rest home and see what the other
>residents are doing, maybe you can get into a game of strip checkers or
>something to take you mind off of your inability to get a ham license.

"JJ," quit trying to tawk tuff. Your fake testosterone is showing.

You keep HIDING your identity. Afraid to show who you really are?

You don't really have any sort of license, do you? Yet you PRETEND
to have one with all the tuff tawk and nastygrams in messages.

Pretense and pseudo patriotism is all you have shown so far.

You are ANONYMOUS. A NOBODY. A ZERO. An Unidentified
Spitting Object (USO) entertaining only yourself in "the service."

Get on the mailing list for "Ham Radio For Dummies" to be
published soon. Study it. Learn from it. You could be somebody
instead of the nobody you are in here.

Feel free to do so. Nobody is stopping you.

Hide your head in the sand, stop up your eyes so you won't see the
annoying and distasteful commentary against your personal desire.
Make all in the future do as you had to do by LAW..

Close your mind to controversy. The law will remain constant and you
will be content. Insure that others be as one-sided as yourself. That is
nirvana, to hold the standards and practices of the 1930s forever.

You have all the answers that all others should have. In your opinion.

Don't worry lennyboy, I do have an Advanced class, lack of display of my
callsign is of no revelance to "Ham Radio Is A Hobby Not A Service".
You don't hold a ham license therefore you are irrelevant to any
discusson on ham radio. How do I know you are really who you say you
are? I think you are a fake, just someone with a bogus id, not who you
say you are at all.

A commercial license that isn't worth the paper it is printed on now. I
held a Second Class, got it in 1961, since expired, so what does that
prove? I also hold an amateur radio operators license...you don't.

Yea, ham radio operators have received lots recognition for their service in emergency communication, from local officials all the way to the Whitehouse. I don't ever remember seeing anyone standing in line for a medal. Grinds your hemroids dosen't it? You can't be a part of it because you can't or too lazy to pass the test, so you devote your time to attempting to tear down amateur radio. Stop wasting you time, it doesn't fly. You really have a hard on for those of us who took the time, have the ability to learn, and obtain a license don't you?

> You are ANONYMOUS. A NOBODY. A ZERO. An Unidentified
> Spitting Object (USO) entertaining only yourself in "the service."

And as a non-ham on this group, you are a NOBODY, NADA, NOTHING, ZERO, ZIP, ZILCH.

Don't be a hypocrite, Jim. You know darn well if this was a Christian group, or some other religion, pushing for manufacturers to change the foods you routinely eat to comply with their own religious beliefs, you would be screaming bloody murder. The only question remaining is why you're not doing so in regards to this religion.

Ah, a little diversity of opinion is good for this group every now and then. At least half here are acting like this is the first time they've ever heard negative comments about the push for Kosher foods in grocery stores and resturants. Another chunk started out by claiming it wasn't happening and now claim they have no problem with it happening (some are still denying it is even happening). And, finally, another chunk could only think of calling me names instead. Regardless, you can bet your bottom dollar that if this was a Christian group, or some other religion, pushing for manufacturers to make the foods the people arguing with me routinely eat comply with the beliefs of that religion, these very same people would be screaming bloody murder.

But, in the end, you and Helmut are probably right -sex discussions are more entertaining and far less controversial.

|

I guess, you did not get the kick off out of my previous, overdrawing and
even sarcastic, youmaycallithowyouwantto post. The point is now clearly and
distinctively said:

Dont discuss RELIGION, POLITICS, SEX ....!

IN THIS GROUP!!!!!

I was told by one of the longer members, discussion should be about amateur
radio (policy). At least two words of twenty lines may please relate to
Amteur Radio.

Why dont you stay put to your own rules?

I realy dont care, how you fight one against each other, it's everyones
feelings, they are hurt. And, yes, ofcourse you can debate kosher food or
muslim hiding of face or christian feastening or budhistic reincarnation OR
WHAT THE HELL you think is appropriate for a decent amateur radio policy
discussion.

I do what DEE is sugesting in her next post: deleting posts to this (or
another) thread.

And, Dwight: Try reading between the lines somtimes, it does not always look
like what it is written.

Cheers for now

I'm not the one making unsubstantiated claims about a religious group, Dwight.

>You know darn well if this was a Christian
>group, or some other religion, pushing for manufacturers to change the foods
>you routinely eat to comply with their own religious beliefs, you would be
>screaming bloody murder.

There you go again, assuming your own conclusion.

You have repeatedly claimed that a particular religious group is "pushing" and "manipulating" the foods "mainstream" Americans eat. But you have not produced a single bit of evidence to back up such a wild claim.

Now, you're claiming to know how others would behave if a different group were allegedly doing the same alleged things.

Do you have a crystal ball, Dwight? Are you omniscient?

>The only question remaining is why you're not doing
>so in regards to this religion.

You mean your wild and unproven claims about "the Jews"?

I'll explain it again, Dwight:

You've repeatedly made claims here of 'pushing" and "manipulation" of "mainstream" America food here, and blamed "the Jews" for all of it, without a shred of proof that it even exists. You refuse to answer simple questions on your claims and deny conflicting evidence. Then you attack those of us who point out that Emperor Dwight has no logical clothes.

Do you really believe all the guff you've posted here on the subject, Dwight, or is this just some sort of really bad joke or troll? I mean - blaming a religious group for bad hot dogs!

61. That QRM called CW

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-02 11:14:08 UTC
From: Anonymous Sender <anonymous@remailer.metacolo.com>
Message-ID: <170d16d3d5ba33fe07169a5cabbf95ef@remailer.metacolo.com>
Source record: 88175

As a SWL, I heard some QRM on the
lower frequencies of the ham bands.
There were short and long beeps but with
irregular lengths (I checked that on an
oscilloscope). Finally I found an old
military gay drunkard operator that told
me that QRM was called CW and was
supposed to be a digital communication
mode.
I asked him how this can be a digital
communication mode with a so slow speed
and no error control, amazing in the
21st century.
He said that CW was invented at a time
where people were not so clever to
invent microprocessors, so operators
with small brains could use CW. These
operators are not yet all dead today
unfortunately, so some CW fossil signals
remain on the bands although new
digital modes are far better, because
the CW operators cannot use computers
(they do not know neither how works a
microprocessor nor how to format a
hard disk under Linux or setting up a
Wi-fi network).
It becomes evident that there are 2
classes of ham operators. Those born
with CW and those born with SSB.
Those born with CW bring nothing to
amateur radio today, they are unable to
use new technologies. So it will be
reasonable to allow CW operators
above 1 GHz only to limit the QRM with
CW and called them "Dinosaur class" and
the others called "Pioneer class" on
all bands.
When you see the new ICOM IC-7800 that
has the PSK31 mode included, you
understand that the new way for
ham-radio is not CW. Happy death CW !

> Dwight Stewart (W5NET)

Dwight,
I live and grew up in probably the northeast which probably
has a population segment that is Jewish in far higher percentages
than most anywhere else. I see NO such claims that Jews
or anyone else are forcing, pushing or otherwise causing any
changes in availability of pork products. If I wanted to
totaly avoid Kosher labeled products I'd have NO problem
doing so. In fact, I can't even think of an area restaurant
that claims to be Kosher.

My local A&P and other supermarkets carry a wide array
of pork and shellfish products (did you know most shelfish
aren't Kosher?) I have NO problem in restaurants ordering
a ham and cheese sandwish anywhere...or bacon and eggs,
or sausage and pepers, or shrimp...etc. The fact is, around
here, restaurants would be nuts to try and limit there menu's
to be Kosher only. Are there some truly Kosher restaurants?
Absolutely...just as there are other specialty restaurants that
cater to specific ethinics foods (Italian, Chineese, Japanesse,
Thai, German, French, etc.)

You claim you can't order pork products anymore where
you live...or in many places...well one explanation for seeing
a reduction of pork products might also be the fact that
more people, Jews and Gentiles alike, just don't eat as
much pork. Jews for obvious Kosher reasons and Gentiles
because of the cholesterol concerns. As an aside, I have met
more than a handful of Jews who have no problem eating

non-kosher foods, including pork products.

One last point, you (Dwight) raise the question of "if this was a Christian group" doing the same aleged influencing of food availability? Well, to my Christian upbringing and personal religion to this day, I can think of NO dietary constraints that are a part of Christianity.

Cheers,
Bill K2UNK

How on earth do you "know" that?

If there were guidelines for "Christian" food, you can bet I would be
happy to manufacture food to their preparation requirements.

It's economics, not religion.

The only question remaining is why you're not doing
> so in regards to this religion.

It's economics, not religion.

The strange thing here is that you do not see something that was
deliberately and demonstrably included in the POA as a prayer as such,
but you see food voluntarily prepared to guidelines that allow one group
to purchase those foods - and are looked at by many others a a product
with a certain level of quality - as a religious thing.

Which is why I'm beginning to think that you are just having a joke on
us too!

The exchange rate is what is going to kick-start inflation. since the dollar has been falling against other currencies recently, the other countries either have to raise their prices, or keep them the same, which is actually a price cut due to the exchange rate.

Since we import so many things, those prices will go up and business will start charging more to offset the price rise......

One a daily basis such as reporting traffic accidents, calling for an
ambulance, and other minor emergencies, probably, but in a major
disaster cell networks tend to become overloaded and useless. Ask the
emergency officals in NYC about 9/11. The cell phone networks were so
overloaded they were practically useless for any emergency efforts. That
is why the hams were called in. Your point is?

What's your point? The same can be said of many things.
Ham radio is still a service and considered by the FCC to
be of sufficient value as a service to warrant keeping it around.

Yep,

Also note that this is why OPEC is cutting oil production. Their price is benchmarked to the US dollar and they have stated that the dollar is sinking so they have to raise prices. Given time, you may see more radios manufactured in the USA. Of course, few in the US will be able to afford them since we will be the cheap labor of the world. Give it about 10 or 15 more years.

Stay tuned to this one and see who blames whom for the mess that is likely to result.

Where in Part 97 of the FCC Rules and Regs -- do you see the word "Hobby" ?
(answer nowhere)

and where do you see the word "Service" ?
Quote Title " PART 97 AMATEUR RADIO SERVICE"

Now am I to believe you or the FCC ??

Here in San Diego, a ham hiker overdid it and was grossly dehydrated- his
cell phone was not able to make a connection

But a Ham repeater that covers all of San Diego county worked just fine SD
County is 4,261 square miles.

A helicopter was sent in and after several hours in a hospital the dry ham
recovered
Now would you call that a hobby or a service ??

This has happened time after time in disaster situations and as Walter
Cronkite stated "Amateur Radio is probably the only fail-safe communications
in the world"

It is of no importance as to the ratio of cell phone calls to ham radio 911
calls.
What is important and vital is that we have both - wouldn't you say ?

Lennie's insistance that Amateur Radio "always" saves the day is
his way of skewing the results in his favor.

The FACT is that Amateur Radio DOES still offer that "...when the
chips are down" fall back, and judging by the support lent by so many
civil and governmental agencies, I dare the scumbag to deny it.

In THIS century, amidst the Internet, cellphones, spread spectrum
ad nauseum, Amateur Radio >>HAS<< helped to "save the day"...

Amateur Radio enjoys the same "reputation" that the Armed Forces
does today...for no matter how amazing our "shock and awe" weapons
are, we still depend on the basic infantryman to get the dirty work
done.

Well...Technology has it's flaws and vunerabilites, and more than
once in RECENT events Amateur Radio HAS been called upon to fill the
gaps until all that wizz-bangery can be returned to operational
status.

In short...it doesn't matter how many times that Amateur Radio has
"saved the day", the point is that it CONTINUES to do so, even in the
21st Century...

Sorry that the FACTS hike Lennie's skirt up. Of course when it
did, we found BurkieBoy UNDER Lennie's skirt!

As for you, Burke...Well...What can I say...?!?! You like
playing follow-the-loser, and I can see from your "comments" that you

do it well. I guess being an idiot is a learned trait...I just didn't think anyone would go out of thier way to do it!

Bully for you. A person has to do SOMETHING well, and I guess you've found your niche...

Suggest you find your local ham radio store & local ham radio clubs.
Ask them all for attorneys who are hams.
Talk with those attorneys, who are your best choices.
All will know that, as long as your rig will stand inspection (i.e., no linears, legal output), that a letter to the power company will make this problem go away.

But, where are you, and which power comany is this? Are you in the Commonwealth?

Would appreciate you posting the entire letter here (redacting your address, of course).

We have to understand that there are those who envy ham radio and it's
long tradition to public servicea and it's ability to come to aid in
times of emergency, often being the only means of reliable
communications. These envious people are too lacking in knowledge or are
too lazy to do what is necessary to qualify for a ham license
themselves, so the best they can to is attempt to tear down an
institution that they cannot be, but desperatly want to be, a part of.

78. Lennie Steps In His Own Excrement Once Again

> >pacemakers and hams.
>
> That is irrelevant coming from a NOBODY, an ANONYMOUS
> troll who doesn't have the guts or the heart to identify herself.

The fact is they are correct.

The fact is that pacers are not necessarily placed for an MI.
There are numerous cardiac disease processes which may dictate a pacer
placement. See "sick sinus syndrome" as one example.

> Go ahead, make our day, put a pacemaker wearer right next to
> a mismatched 1 KW transmitter connected to an antenna with
> open-wire lines. Do you want to "experiment" with something
> that might kill a person? Would the gunnery nurse do that?

Heck no...But I know better...And I KNOW that an INFARCT is not
the only etiology that may mandate a pacer placement.

> You both would, of course, at least in messages. You guys are
> TUFF, strong, noble, good, and true, know everything (and know
> hardly anything).

In this case I certainly know more than you, Sir Scumbag!

>
> I'm not blaming "all those nasty hams." Just the PHONIES
> with federal merit badges in here who think they are all gunnery
> nurse candidates in search of a real self.

"Federal merit badges"...?!?!

You keep using that term, but other than being led back to YOUR
RRAP posts using it, I can't find ANY reference to it in ANY search
engine...

> >Now back to you room lennie and let some other resident of the home use
> >the computer, the nurse is waiting to give you your meds.
>
> Only in your fevered imagination ANONYMOUS ONE.

It doesn't take an MD to see that Lennie clearly ISN'T taking any
medications for his problems.

> My home IS restfull but only my wife and I (and three cats) live here.

Again we notice no reference to all those loving offspring that
you MUST have raised in order to have created an INFORMED opinion on
setting a mimimum age limit for Amateur Radio licensure.

> Nice 2000 square foot place in the hills. No "nurse" in attendance.

No doubt that no one wants the job...Not anyone with a penchant
for sanity, anyway...

> That's just the southern house, the one in California, the same postal
> address in all those Ham Radio magazine bylines. The northern
> house on the Puget Sound is even more restful...same size but nice
> pines all around...only two pines down here but 14 tall cypresses.
>
> Good health here, no heart problems.

A lack of a heart would negate any heart problems...In any case,
YOUR problems are clearly NOT cardiac in nature.

> I only counterattack the FAKERS, the ANONYMOUS trolls, the
> PRETENDERS, the GUTLESS ones who imagine they are radio
> amateurs of great toughness and resolve and superior to all others
> yet HIDE behind a pseudonym, AFRAID of truth.

WoooooBoy!

Leonard H. Anderson, well known PATHOLOGICAL LIAR and NEWSGROUP
ANTAGONIST ranting about "counterattack(ing) the FAKERS, the ANAYMOUS
trolls, the PRETENDERS, the GUTLESS ones...etc etc"

THIS from a PUTZ who has been caught MORE THAN ONCE generating
new screen names in this forum in order to make it appear as though he
has a wider support base than the few hanger's on who HAVE "supported"
him.

Let's look into that...We have Brain Burke...He's alleged to have
been "DX", yet can't/won't provide any evidence of the validity of his
claims...NOT ONE QSL card...Not one callsign of someone he "worked"
while "over there".

Of course Brain has also "proudly" claimed to be Lennie's padawan
learner, stating that Lennie's his "mentor"...Some mentor. Known liar
and cheat.

And Brain has further tried the "anonymous" poster trick, only to
follow in Lennie's shoes and slip up and put his "real" name to the
ending of one post, hence ending THAT charade. That's what happens
when ego overdrives common sense.

Then we had Vipul Shah...Vipul claimed to be an "electronics
engineer" who then quit when his family pressured him since being an
engineer is apparently a social failure...He's now disappeared into
the woodwork, having taken some obscure job that HE says his boss told
him would make him a pariah amongst his co-workers. I guess THAT is
"OK" in his culture...

Vipul too came here as an anonymous poster at first, but since he
generally followed Lennie's coattails, Lennie had NO problem with
accepting Vipul's "input" to the group.

He also came to the group shamefully hiding his Amateur Radio credentials since that too was obviously some social bugaboo...Hidden, of course, until I "outted" him.

Yeah...That's some circle that Lennie and Brain run in...

> YOU fit all those categories, "JJ."

It's too bad he won't identify himself, but it's even more a shame since I can't personally thank him (save for this forum) for so skillfully squashing Lennie's nads...Not that doing so requires a lot of effort! Lennie DOES make it sooooooooo easy to do!

> Now be good, little "JJ" or Mama Dee will spank you and take away
> your computer privileges until grade school is over for the summer.

Likewise, you lying, disgusting little wimp of a human...

You screwed up...You got caught, and rather than just shut up and move on, you tried to dig yourself out by making even MORE excuses. You made a fool of yourself and even further cemented your reputation as "Master Newsgroup Antagonist" in the process.

WHAT an IDIOT!

Steve, K4YZ

Go re-read my post again about the ham and the pacemaker incident. A
pacemaker was placed next to the operating position of the hams station
and operated at the full legal limit. Nothing happened to the pacemaker.
Senility is really affecting your reading comprehension lennyboy.
Now go back to the front desk and ask the kind nurse to point you the
way to your room so you can lay down and get your afternoon nappie in.

Your aren't even a ham, can't pass the test, have nothing to do with ham radio, so why would you even care?
Show me one ham with a federal merit badge.

> FCC's action matters.

Not really.

You're confusing laws with civil lawsuits.

If you want a real life example, the FAA is the ultimate authority over
what flies in the US.

In a lawsuit filed in Massachusetts, a group of homeowners are suing
some pilots who are operating within FAA requlations for damages due to
noise.

How this turns out should be of interest to hams as well as pilots.

It isn't much of a stretch to envision homeowners suing legally operating
hams for damages due to loss of view or some such thing.

For the story:

Is it the same one in your living room that you watch Bevis and Butthead
videos on ????

Finally I found an old
> military gay drunkard operator that

Saved your sorry ass many times over .....

told
> me that QRM was called CW and was
> supposed to be a digital communication
> mode.
> I asked him how this can be a digital
> communication mode with a so slow speed
> and no error control,

The only error control that you need was to read this simple post before it
went online.

amazing in the
> 21st century.
> He said that CW was invented at a time
> where people were not so clever to
> invent microprocessors, so operators
> with small brains could use CW.

Yep ...look what clever microprocessors got us .....postings like this ....

These
> operators are not yet all dead today
> unfortunately, so some
CW fossil signals

Ya know fun is fun but wishing the death of a group of people is sick and really shows the intellegence here.

> remain on the bands although new
> digital modes are far better, because
> the CW operators cannot use computers
> (they do not know neither how works a
> microprocessor nor how to format a
> hard disk under Linux or setting up a
> Wi-fi network).

I would suggest you get back and retake 6th grade English. The only reformatting that is needed here is to turn off the web porno ....get out of that dark room, move out of your mother's house and get a job ....then you may get an idea of what life really is about.

> It becomes evident that there are 2
> classes of ham operators. Those born
> with CW and those born with SSB.

Huh ??? And those wannabes who are too lazy to learn a 5 WPM pass .....

> Those born with CW bring nothing to
> amateur radio today, they are unable to
> use new technologies.

Just like you are unable to present an interesting argument save displaying your gross ignorance both in intellegence and social skills.

So it will be
> reasonable to allow CW operators
> above 1 GHz only to limit the QRM with
> CW and called them "Dinosaur class" and
> the others called "Pioneer class" on
> all bands.

If ham radio was turned over to the likes of your Pioneer class then I would be glad to spend my remaining ham life above 1 gig on CW.

> When you see the new ICOM IC-7800 that
> has the PSK31 mode included, you
> understand that the new way for
> ham-radio is not CW. Happy death CW !

Look SWLer .....either post in your native language or go reformat that hard drive. Again get in touch with your 6th grade teacher for some sentence structure work. There again is that "Happy Death CW" stuff. I really think that you need to remove those nose and tongue studs, get rid of those Gothic clothes and see a counseler about your death fixation. I use this newsgroup for a few minutes of diversion .... please the next time you post put a little more thought and effort in to things.

73 KI3R Tom Popovic Belle Vernon Pa .... and wishing you a happy and more fulfilled life than apparently you now have.

I find Dwight's statements hard to believe also. Around here you have to go to a special isle to find the Kosher foods for the most part although a few are on the shelves next to the standard stuff and they are clearly labeled. None of the restaurants that I happen to go to even have Kosher items on the menu.

It doesn't matter if it is more or less. Both have been used and both are
valuable. We need to keep as many forms of communication as possible so
that there will be at least one, preferably more than one, mode available in
times of need.

>much pork. Jews for obvious Kosher reasons and Gentiles
>because of the cholesterol concerns.

IF per-capita pork consumption is down, that's one possible reason. Another is competition from other food products. When I was a kid, turkey was something you had at Thanksgiving and maybe Christmas. Now things like turkey sausage, turkeyburgers, and ground turkey are all over the place. Same with chicken.

I don't think Frank Perdue is Jewish, either.

>As an aside, I have met
>more than a handful of Jews who have no problem eating

Hey Dave...here's MY interpretation of Brain's non-answer:

"I have no valid answer. I know that common sense precludes my
being able to render any effective response without further
demonstrating my ignorance and arrogance, hence I'll just make some
inappropriate insinuations and hope no one notices how foolish I
REALLY am. My sole purpose in this forum is to disrupt any meaningful
use of this forum, and to emulate my mentor, Lennie Anderson, a known
and documented pathological liar."

Hey Brain...did that pretty well sum it up?

Steve, K4YZ

Many, many, many, many, many people claimed to have successfully used
their cellular telephones fleeing from the Twin Towers. It was in the
news.

Post 9/11, sales of cellular phones skyrocketted. It was in the news.

Oh, contraire!

Larry Roll has set up many a scenario where not only is amateur radio
the ONLY means to save the day, but only ONE particular mode is
suitable to save the day.

He's done it again and again.

Are we Not to believe Roll?

That is why the cell network was no good for any emergency assistance communications, it was people overloading the network to call someone to say they got out alive, calling everyone they knew to turn on the TV, ect. The cell network can't be counted on for emergency aid in such a crisis as everyone wants to use their phone for non emergency aid type calls. That is what I meant when I said in my post that cell networks tend to become overloaded so that they are practically useless for emergency aid, so of course there were many, many, many people making calls, that is why the network was overloaded - DUH. And the skyrocketing sales of cellular phones after 9/11 will assure that in the event of another such disaster, the network will be even more overloaded.

As a dietary law, meatless Fridays have pretty much gone by the wayside. meatless Fridays would also be analogous to only eating Kosher one day a week.

Cheers,
Bill K2UNK

100. Outcome of CB/Utility BPL Dispute

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-03 09:54:47 UTC

I wrote here last week about the lawsuit that the local utility
here in Cincinnati has threatened me with. I consulted a attorney and after
looking at the law he advised me that the utility could sue me for because I
do not have a FCC license. I will be taking down my CB antenna from the
house. The main reason I am not fighting the utility is because of the cost
of defending myself in a lawsuit.
I really can't believe the responses I received with my question here last
week, but I know it is important for others to know about my experience.
Maybe some one with the money will be able to stand up against the utilities
that are now selling BPL access and sending out cease and desist letters

Tom

Of course I have, Jim. Are you going to sit there and claim no group whatsoever is pushing, urging, or whatever you want to call it, companies to make their products Kosher? Given that I've already listed one web site of a group doing exactly that, your claim would be absurd. And there are dozens of similar web sites (and probably more groups without web sites). The web site I listed talks about what is necessary to certify a product Kosher. That includes changes to or manipulation of both the preparation and handling of those food products. Given that this web sites claims 75,000 food products are now certified Kosher, are you going to deny that exists? As I stated earlier, no further evidence is needed from me - those reading can look in their own kitchen shelves for the small "K" on the product labels to discover which of the products they eat are certified Kosher. They can also decide for themselves if those products are limited to just "Jewish" foods like you claim or the mainsteam products we all eat.

Actually, few products are clearly labeled, Dee. Go to your kitchen and look at the cans of soup, tomatoe sauce, tomatoe paste, and so on, for a very tiny "K" on the product label. Then go to one of the Kosher web sites to discover what that tiny "K" means (the same with the tiny "U," "P," "D," and similar symbols, on other products). Also note that we, the consumers, are paying for that Kosher certification and product labeling.

The fact remains that many emergency calls were placed and got through
using cellular telephones.

Heaven forbid an emergency happens during a contest weekend!

A 1 Mb/sec feed in each direction for only $29.95 per month? That's what the press releases claim that Cinergy Electric can deliver right now.

BPL is a juggernaut that will not be stopped by the ARRL or anyone else. There's simply too much money in it.

And notice that this isn't rural service either. Probably not too surprising, since the claim of rural services is simply a pretense anyway. It's large cities like Cincinnati that the BPL proponents intended to service all along.

Goodbye to radio station WKRP, by the way. Nobody will be able to listen any more.

Unless I've missed something along the lines - "I" am taking it you're in the US, the last I heard from way back when is that CB's no longer required a "license". So how can they sue you for operating without a license when the governing body of radios, doesn't require one? According to Part 95 - which still does exist, you're very eligible to remain on the air and talk. Your attorney may be a smart man, but it ticks me off when people who have no knowledge of radio, issue opinions such as that. They need to research that which they have no knowledge of, before issuing an opinion or trying to defend one. I don't know, I think I'd be contacting the FCC on that issue. I can't see that they can force you off the air. Maybe you don't have money to pursue a lawsuit, but you can certainly seek out the aid of your elected officials. "I" think you DO have a case. Go online to the FCC website if you don't have a copy of Part 95, to view it online. Print out a page of it, which shows you no longer need the license. E-Mail them while you're at it. Let them know what you've been told. Don't just lie down and let them bull doze you over. CL

Are you suggesting that they ONLY can purchase Kosher products?
Is there someone holding you hostage such that you MUST buy the
particular brand of hot dogs that are Kosher?

Cheers,
Bill K2UNK

Unfortunately I agree. There is simply too much money backing BPL. The best we can hope for is to slow it down or at least apply enough pressure that the industry finds a way to clean it up. As it stands now, amateur radio as we know it is in grave danger.

If you are operating within the law then you are operating under FCC authorization. A ham license is another form of authorization, but a legal CB station is no less legal just because it doesn't require a license. However, you need to be more specific -- under what law (USC, CFR, state or local law) does he claim is being violated?

> I will be taking down my CB antenna from the
>house. The main reason I am not fighting the utility is because of the cost
>of defending myself in a lawsuit.

Here in Spokane, Gonzaga provides legal help for people in pickles like your's, and many of these students are real go-getters. You might have a similar program at a law school near you.

They can't shut down all the CBers in the city. Either you are kicking out too much RFI (and you may not know it), or there are a lot of other CBers in your area that are just as pissed off as you. If the latter is the case, you might think about contacting them and pooling your defensive efforts.

So what. No one forces any of those companies to listen or to
produce Kosher products just because a group wants it so.
The final arbiter of making a product Kosher is the marketplace...which
is as it should be.

> Given that I've already listed one web site of

And just what about that web site bothers you? Should it
be prohibeted, banned, or otherwise outlawed? If yes, please
explain why?

Who, other than you gives a hoot? What is it that really troubles
you? If you don't like products identified as Kosher certified, then
don't buy them.

> As I stated earlier, no further evidence is needed from me - those reading
> can look in their own kitchen shelves for the small "K" on the product

Again, so what. There's nothing illegal, immoral or unethical about
a company gaining Kosher certification if the company wants to

do so.

> They
> can also decide for themselves if those products are limited to just
> "Jewish" foods like you claim or the mainsteam products we all eat.

Many basic food staples can be certified Kosher as I understand it.

Cheers,

The reality of things economic is that, like it or not, we are in a global economy and that isn't going to change. The drastic reduction in costs of shipping (both importing and exporting goods) as well as similar reductions for communications makes it cheaper to manufacture and even provide certain service functions off-shore. That isn't going to change in the short run. In the long run, those currently cheap off shore labor markets will self adjust upwards. In the short run, US labor has their head in the sand if they think there's something either party (Dems or Reps) can really do to stem the shift of manufacturing jobs overseas. The same thing is going on in Europe.

In the long run, employees must be constantly reevaluating their job skills and looking at the prospect of how vulnerable their job may be as to their job being farmed out to off shore labor.

Cheers,
Bill K2UNK

Have you actually received one of these?
Has anyone you know received one?
If so, could you post a scan?

I'm very concerned about this, I'm in Muncie Indiana, not all that far from
you, and apparently we're next. I'm a ham, but I agree legal CB stations
have every right to be protected from interference coming from part 15
devices.

Like it or not, CB and Ham radio are both in the same pot this time, and
it's getting warmer.

This battle is likely to be won however, by complaints of interference to
low band VHF public service frequencies, and airports.

I am not the one who sets the rules, Brain.

You make a fool out of yourself in a public forum...I
sarcastically call you "Brain" since you keep on doing it over and

As for the "KMA" club, thanks...Sure is embarrassing having a
membership that much junior to YOURS, though....

Yeah but it's typical on USENET. A cease and desist letter WRT BPL is something new and everybody's troll alarm goes off. As another poster suggested, a scan of the letter would be interesting to see as we're all going to have to deal with this sooner or later, at least from the way things look now. No announcements of BPL roll-out for me yet, but the same company (Progress Energy) is doing trial runs in another city nearby so it's only a matter of time.

Good luck.

> > I have never seen Jim Miccolis refer to you as anything but
> > "Brian"...
>
> How is it that you misspell my name in one fragment sentence, and
> spell it correctly in another?

Because, BRAIN, it's not about how >>I<< address YOU...It's about
why do YOU address Jim Miccolis with belittling endearments when
>>HE<< has never addressed YOU as anything except your proper name?

That scumbag you run with likes to do that. Jim has never
refered to him as anything but "Len", yet "Len" finds countless ways
to belittle him.

Lennie does that because he cannot "argue" or "debate" Jim
otherwise. He has to make Jim appear less-than-adequate in order to
promote himself. The weak minded and the foolish HAVE to do
that...It's a defense mechanism.

Are YOU that weak minded and foolish?

He did the same thing with me when he launched into allegations
of being a "jack booted thug", "Nazi", "elitist", "Dill Sergeant", etc
etc etc, when I had not so addressed him. He is treated and addressed
in the same tone and with the same viciousness as he unleashed.

Is that how you feel? Do >>YOU<< need to belittle Jim in order
to effectively express yourself when discussing things with/about him?

Please do not humiliate yourself by trying to misdirect this
question by asking >>ME<< about how I address Lennie...I've already
answered that.

Stay focused...you were asked a direct, specific question.

You CAN answer direct, specific questions, can't you?

> > So WHY do YOU inisist on following the insulting and demeaning
> > example of a known pathological liar and antagonist in engaging in any
> > interaction with him...?!?!

> known as" sounded good to me.
>
> You got a problem with it?

I have a problem with you lying.

I have a problem with you following in the footsteps of a person
who is a known pathological liar and antagonist. It's embarrassing to
see a contemporary Veteran and Amateur licensee resorting to Lennie's
tactics.

As for what "sounded good to (you)"...My question STILL
remains...Did Jim refer to you by any name, title or endearment OTHER
than "Brian"...?!?!

If not, why do YOU find it necessary to do so...?!?!

> > Are you, after all, as shallow and immature as I thought you
> > really are?
>
> No. Perhaps even more so. Perhaps almost as much as you are.

Brain, you will NEVER be as much as I am...good OR bad.

> > Please give some specific example of how Jim has belittled or
> > demeaned YOU in a like manner...
>
> Why? Shallow and immature people don't have to follow your orders.

What "order", Brain...?!?!

I SAID "please"...And to have fulfilled my request would have only
served to explain why YOU find it necessary to be demeaning and
rude...>>OR<< have proven why you were right and I was wrong.

Instead, you choose to be even MORE argumentitive and demeaning,
even further cementing your reputation.

> Stebe, take a chill pill or whatever meds you forgot to take.

Uh huh....Just after you take your distemper shot, Brain, and
answer the question put to you. WHY do you find it necessary to be

rude and demeaning when no such epithets were addressed to you...?!?!

Steve, K4YZ

PS: I will assume any answer to the question that attempts to redirect or obfuscate the response to be "I am unwilling to directly answer the question as I know the truth to be other than what I stated". Simple enough?

I certainly don't follow any special diets, although I find it interesting that those Jews held hostage in Entebbe, Uganda, that kept Kosher, did not suffer many of the ailments that other passengers did.

Many "religious" rites involving foods or drink usually have some valid historical basis behind them. In Biblical times, the knowledge (and certainly the means) to properly store and prepare pork products was not there...hence people who ate pork products routinely became ill, even died.

The drinking of wine in Christian and Jewish faiths also has historical basis...Drinking water was often brackish or otherwise unfit...Wine and beer, however, had been fermented, and many of the offending bateria had been unwittingly purged from the brew in the process...

'mazen, ain't it...?!?!

And if they HAD signed it, we'd just have more expensive BMW's
and Mercedes here since the cost of the additional engineering would
be passed on to the consumer...And American's WOULD pay it...

People once said that Americans would stop smoking once the price
of cigs went over $2.00/pk...well, it's been that way for a long time,
save for a few cheap "generic" brands, and the "name brands" don't
seem to be in any distress.

Americans like what they like, and will pay to get what they
like. That's a "consumer driven" market.

Then explain to me why the Empire kosher ground turkey I bought last week was *less expensive* (by 70 cents a pound) and *fresher* (later expiration date) than the Perdue ground turkey in the same size package in the same store.

How much do you think it costs the manufacturer to get a jar of Miracle Whip certified?

Where? All I see are your claims that certain foods are not as available today as they were 30 or 40 years ago. Others don't have any trouble finding the foods you say are disappearing.

>Are you going to sit there and claim no group
>whatsoever is pushing, urging, or whatever you want to call it, companies to
>make their products Kosher?

YOU used the words "pushing", "manipulating" and "literally shoving down the throats".

>Given that I've already listed one web site of
>a group doing exactly that, your claim would be absurd.

The group outlines what is necessary for certification. That's not "pushing" or "manipulating".

>And there are dozens
>of similar web sites (and probably more groups without web sites). The web
>site I listed talks about what is necessary to certify a product Kosher.

Sure. It simply says "if you want to be certified kosher, here's what you need to do".

>That includes changes to or manipulation of both the preparation and
>handling of those food products.

Now you're being absurd.

>Given that this web sites claims 75,000
>food products are now certified Kosher, are you going to deny that exists?

I don't see the "pushing".

>As I stated earlier, no further evidence is needed from me - those reading
>can look in their own kitchen shelves for the small "K" on the product
>labels to discover which of the products they eat are certified Kosher.

What's the problem with that? They can also find products that are not
certified.

> They
>can also decide for themselves if those products are limited to just
>"Jewish" foods like you claim or the mainsteam products we all eat.
>
WHOA!

Where did I claim that the certification is limited to "Jewish" foods?

btw, here in the USA, being Jewish is "mainstream". Just like a lot of other
religions and ethnicities.

This bad joke of yours is not funny, Dwight. Never was.

That holds for virtually any "service".

Electric companies do not want to invest in too much equipment that will
sit idle most of the time, so they can have problems when there is a sudden
temporary surge in useage. But such surges are uncommon, so it would be a
waste to have capacity at all times to deal with them.

The phone companies do pretty well most of the time, but on peak days,
like holidays, they may suffere a lack of bandwidth. Again, it's not worth
having that much bandwidth available at all times when it would usually sit
unused.

Many ISPs offer "unlimited" hours, but if everyone tried to get on for
all those hours, it would break down. Likewise, they will not have a phone
line for every single user. It works because not everyone uses as much
time as others, and not everyone wants to call in at the same time.

And that's where amateur radio comes in. Emergency preparedness is
always a gamble. Do we spend money on something that will see little
or no use, just in case of an emergency, or do we spend the money on
necessities, and risk not being able to handle emergencies?

If there is an "auxiliary" who have their own radios (saves money)
and has some ability in using those radios (saves staff) then that

money does not have to be spent "just in case". If there is never an emergency, hams will go on because their interest is not primarily in providing emergency communication. It is a hobby, which means they should get more practical use with the radios than if they took a training weekend once a year. They want the radios for their hobby, so they gladly pay for the equipment.

But just as an electric company can usually buy power from another company on the grid when there is a surge in demand, amateur radio is there to draw on when an emergency comes up that cannot be handled with regular equipment and staff.

This was discussed in CQ in the mid-sixties. The phone company wanted to set up an alternative to amateur radio, including sending equipment to rare countries for DXpeditions. But it would be all done over phone lines.

I can't remember which year, 1965 or 1968 somehow ring a bell, but I can definitely tell you it was in the April issue.

Our Fire Departments here in this county, all operate on the VHF LOW band. A few counties around us also operating on the low band albeit a different frequency were recently with in the last couple years, either bumped up to 800 MHz or are working on it. To some extent they do still operate on low band, but more so the 800 MHz. Now our county is looking at 800 MHz. I have to wonder since no real reason is ever offered, if it is because we're being "pushed" to 800 MHz to allow the BPL to come in so as not to interfere with any current users of Low Band. Also, with everyone being pushed to 800 MHz, sooner or later, it is going to get really crowded. I read one article from a reputable source stating it is already a problem due to get worse. Geee, how about that. What they also don't consider is many of the "volunteer" departments are hurting now. To have to buy new equipment, is not always cheap. In this case, we're talking going from low band to 800 MHz. So, we'll need a base, x amount of mobiles, portables and perhaps pagers. LOTS OF CASH! While our department isn't too bad off financially, the one up the road from us will die instantly with that kind of a crushing blow. Our radios and pagers are all within 4 years old. They're still using a base radio from the 50s. I know, I"ve seen it myself. These people in the upper echelons need to stop and think about the havoc they're playing with many issues, not just one. CL

Since I have no dietary restrictions, religious or medical, I have never
bothered to look for the presence of such labels though I have always
known they exist.

I buy on quality and price only.

An inspection of the goods in the cupboard reveals a mix of labeled and
non labeled items, even among like items such as tomatoe sauce.

I cook a lot of Italian and have a LOT of tomatoe stuff on hand.

Conclusions:

Kosher certification has little, if any, effect on the cost of food.

There are plenty of non certified products available for the rabid
conspiracy loonies to buy.

Steve, is this what you call rational discussion???

Anonymous posting is no charade. Since using my throwaway e-mail account (billybeeper), my regular e-mail account is down about 70 spam messages a day.

And my name is BrIan. Here's a little trick to help you remember: I before A except after Y.

I still think this is a troll, but...

If an attorney said they could sue you because you don't have an FCC
license, that attorney is an idiot and knows nothing about telecommunications
law.

The reason you could be sued is because in the US anyone can sue for anything.

That does not mean they can win or that such a suit will even be heard by
a court.

If the utility were sending out such letters, the FCC would be interested.
Send the FCC a copy.

If you like radio in any guise you will love the hamfest days out!
Loads of junk and stuff. I came across an FM exciter tx with home brew 35 watt PA for £5
If there is any gear there the hams ain't interested so it's usually cheap!
Plus in the UK, in theory any court/ RA/ seized gear, is sold to hams for dismantling and experimental use at such events, worth keeping an eye out.

> How does a cellphone contest work?

The first annual cell phone contest:

March 6-7, 2004

The object of the contest is to demonstrate as many cell phone activities as possible during the 24 hour period of the contest.

The exchange is "I am (give location), I am going to (give location(, and I will be there in (give estimated time) minutes. Buh-bye!" Of course, all the contacts must start with "can you hear me?...Can you hear me now?

Points are scored by number of contacts, but what really pumps the score up is the multipliers:

X2 multiplier for operating while driving.

X2 Multiplier for driving at least 15 mph over the speed limit while driving

A multiplier is achieved for each red light you drive through while talking.

Accidents you cause while talking achieve a X5 multiplier!

If you use your cell phone to send pix of the accident you caused while on the phone, you get an X10 multiplier!!!

No artificial aids are allowed. This means no headsets. Use you phone like God meant you to Right up to the ear.

Anyone found using a voice dialer is instantly disqualified. Besides, those artificial aids interfere with you collecting the really big mult's!

100 percent correct. If you look at the similarities between
the Kosher and Moslem food preparation and forbidden food guidelines,
you can see that it is more of a regional thing than a religion issue.

All the forbidden items are potential problems, with things like
trichinosis or shellfish toxins for instance. So it is more a social
thing, AFAIAC.
And the food preparation for the most part is common sense, or at least
a sort of rough guideline for sanitation/keeping incompatible things
from each other.

I dunno about the business of meat and milk tho'.

The NYC emergency officials sure were not relying on individuals with
cell phones and the cell network to handle emergency communications,
that is why they called the hams to assist.

>always a gamble. Do we spend money on something that will see little
>or no use, just in case of an emergency, or do we spend the money on

>necessities, and risk not being able to handle emergencies?

The answer is painfully obvious...except for mobile installations
and shacks in the deep woods, there is very little emergency
preparedness by radio amateurs...in everything from equipment
to individual training.

Mobile installations have only to start a vehicle to restore electric
power to radios installed therein. However, if a fire or mudslide
destroys that vehicle, then it is useless for the intended emergency.
A "shack" in the residence is only as good as the building or
external electric service allows...amateur radio equipment is largely
"consumer grade" electronics that cannot withstand a wide range
of environments possible in a natural disaster.

>If there is an "auxiliary" who have their own radios (saves money)
>and has some ability in using those radios (saves staff) then that
>money does not have to be spent "just in case".

The California state Auxilliary Communications Service is organized
to use ALL available communications facilities, landline or radio. It
has proven itself well over the last decade through several natural
disaster emergencies. The California ACS does not require members
to hold amateur radio licenses.

Disaster planning need not spend millions to install new equipment
everywhere. The number of utilizeable means of communications
are many and varied: Public service, medical, utility, business radio
services already have millions of two-way radios installed and in use
covering VHF to UHF; telephone infrastructure exchange linking is
done by both landlines (wire and/or fiber) and microwave, the landlines
often doubled-up over dual routes; in California alone there are
thousands of leased lines that never go through switches, such as the
various public safety alert circuits for fire departments, all of which can
be utilized in extreme emergencies; the U.S. government already has
a thousand different HF stations operating in SHARES, not affiliated
with the U.S. military and that is branching off to work directly with
the new Department of Homeland Security; the U.S. military has an
enormous reservoir of communications equipment and facilities in
both the states' National Guards and active military, such equipment
covering the spectrum from LF to microwaves, radio relay to tropo-
scatter to communications satellite relay in addition to conventional
radio propagation means; there is a moderate reservoir of "private"
land mobile radio services that covers business radios to private boat
owners which can be pressed into use during extreme emergencies;
millions of no-license-required two-way radios such as CB or FRS
types can also be utilized in extreme emergencies.

Few amateur radio licensees are aware of anything but the last.
The general thinking is that all communications was set in the
1950s style with the exception of cellular telephony which they claim
"always fails in every emergency."

>If there is never
>an emergency, hams will go on because their interest is not primarily
>in providing emergency communication. It is a hobby, which means they
>should get more practical use with the radios than if they took a training
>weekend once a year. They want the radios for their hobby, so they gladly
>pay for the equipment.

Imagination, fantasy, and wishful thinking are all free and those items
are in great operational use as hams rationalize their expenditures
and boast of their "emergency preparedness" and "homeland security"
"service" as if all they do IS emergency service ALL the time. :-)

>But just as an electric company can usually buy power from another company
>on the grid when there is a surge in demand, amateur radio is there to
>draw on when an emergency comes up that cannot be handled with regular
>equipment and staff.

So it is with the tremendous variety of existing communications facilities
in use every day throughout the United States, public safety and utility
radio services operating 24/7.

The Greater Los Angeles Emergency Communications Center got its
"baptism of fire" (so to speak) during the Northridge Earthquake in
January, 1994. It is a central command post as well as a network
coordinator tying together over 70 cities and communities in a portion
of southern California. They use EXISTING radio services, those that
can be coordinated and trained on a periodic basis. Those are working
radio services, not the "let's pretend" of some hobby activities. The
Center has had several emergency incidents since the quake of a
decade ago and handled all of them.

In a TRUE emergency, ANYTHING can be used for communications,
anything from simple HTs to notes hand-carried by messengers on
foot. Yes, amateur radio can be a part of that "anything" but such is
practically worthless unless teamwork can be done through organization
and periodic drills of simulated emergencies, training activities that
prove out existing procedures or are good for showing needed changes.

Amateur radio activity is generally very personal and few amateurs are
willing to work in groups or even be directed by another amateur;
certainly not by an outside agency that they claim "doesn't know the
first things about ham radio!" :-) Such individualism, parochialism
doesn't work well in a real emergency situation that doesn't make room
for boastful claims which are unproven.

There should be nothing wrong with being just a hobby. Hobbies are
excellent for recreation. What is wrong is trying to extend the hobby
into the realm of the supernatural by using political statements of a
very general nature to justify their existance.

Check with the Dallas, Tx FCC office, they can verify it.

And here is another, get some 6 year old to read it and explaine to you
so you will understand.

****
HAM RADIO AND PACEMAKERS
This is from Angela, VE7ANGï¿½s Newsletter.
Richard/VE7SRB has had a pacemaker installed recently. At first he
thought he might not be able to continue Ham Radio, but after some
research he came up with the following. Perhaps it will be of interest
to others.

We have researched the literature concerning the effects of amateur
radio broadcasts and their potential effects on implanted pulse
generators. Most articles concerning the effects of electromagnetic
interference (EMI) on pulse generators touch very briefly on the effects
of radio frequencies.

We have done testing on types of interference most likely to be
encountered by pacemakers patients. One category of interference we
tested was radio frequency. This covers the HF and VHF bands from 1 MHz
to 200 Mhz. Amateur radio, broadcast AM and FM, TV two way
communications, short-wave diathermy and CB radios are in this range.
Many transmitters have large power capability. Radio amateurs are
allowed a one kilowatt input in eight bands, commercial short-wave goes
to 250 KW, broadcast to 50 KW, two way radio in emergency short-wave
regularly uses 150 watts in mobile installations. Implantable pulse
generators may be affected depending on the details of shielding and
filtering in the device and modulation of interference signal.

Testing was performed on 106 pacemakers comprising 20 different models
from various manufacturers. Testing was conducted at interference
frequencies of 3.4, 7, 14, 21 and 28.6 Mhz. No effects on pacemaker
operation were observed in the presence of field strengths less than 200
volts/meter. Field strengths of this magnitude are unlikely except in
the immediate vicinity of a high power transmitting antenna.

Overall, our testing indicates that pacemaker patients are very unlikely
to encounter problems with radio frequency fields. Certainly we would

recommend avoiding direct contact with transmitting antenna.
****

Now go ask the nurse for another blood pressure pill lennyboy so you
don't have a stroke.

this could be a good thing... just think, if the bpl people have the
resources and time to track down one single supposedly legally operating cb
station and shut it down, just think what will happen when they move into
neighborhoods with the illegal power over processed splattering monster amps
dueling with each other! let the bpl people track them down and sue them

off the air! the fcc doesn't have the time or money, but maybe the bpl people do.

now, if you believe that they could pinpoint one cb station as the cause of bpl problems, and that they have the resources to start lawsuits over every one of them, you have been succesfully trolled in my opinion.

That's one part of it, but there's more. The most popular doemsticated
animals back then were sheep, goats, cows and pigs. All except pigs
give usable milk, which can be used fresh or made into cheese that
will store well without refrigeration. Sheep and some breeds of goat
give wool. All you can get from a living pig is bristles for a paint
brush.

Pigs require the most water per pound and aren't exactly the easiest
to herd. The meat can be eaten safely if thoroughly cooked, which
requires lots of fuel.

So if you're in a warm dry climate with few trees, which domestic
animals make the most sense?

> we know it is in grave danger.

Guys...the trick here is to get organized clubs to start placing
informational ads in local papers and other media to INFORM the public
of exactly what harm BPL will bring. Yeah...it's gonna cost some
bucks, but what's it worth to you to keep this crap at bay...?!?!

They ALSO need to be informed that since this is a Part 15
program they are afforded NO PROTECTION from interferene from ANY
licensed radiator.

Lastly, we need to get the ARRL to start lobbying Congress to
mandate an informational insert in any BPL-accessing device informing
the consumer of exactly what Part 15 means and what the consumer can
expect.

This whole thing is strange. The FCC just put out the NPRM. Nothing is sealed (about BPL) yet. Can someone say troll ?

yeah, but bpl was/is legal under part 15 as it stands the way i understand it. the nprm was supposed to be to make it easier for bpl to satisfy part 15 by raising the radiation limits and maybe some other stuff... but apparently some areas are going ahead either with their temporary experimental license or just under the existing rules.

I'm sure that when the French start calling you on a CAP frequency
that you'll ask them to include a green stamp to QSL.

Best of Luck.

Hey, don't knock it. I make money off attorneys all the time. If you
ever want to do I.T. work, do it for attorneys. They're used to being
billed top dollar.

Is your attorney a ham?
If not, you picked the wrong attorney.

>and after
>looking at the law he advised me that the utility could sue me for because I
>do not have a FCC license.

This is blatant and complete malpractice UNLESS you neglected to tell us
something, such as
a) you're operating outside of CB frequencies
b) you're operating with more than permitted power for your CB frequency

> I will be taking down my CB antenna from the
>house. The main reason I am not fighting the utility is because of the cost
>of defending myself in a lawsuit.

Ask your local hams for support. They, like me, would be outraged at a
power company bullying you around. They, like me, will PayPal financial
support to you IF you are using legal power on legal frequencies.

> I really can't believe the responses I received with my question here last
>week, but I know it is important for others to know about my experience.
>Maybe some one with the money will be able to stand up against the utilities
>that are now selling BPL access and sending out cease and desist letters

There are people with money willing to contibute to a competent defense.
If you get an attorney who's not a ham, you have incompetent defense. If
you want to stand in the middle of the road and let the truck run over you,
well, that becomes a personal preference, which is something I will not
interfere with.

I say it is. Until you behave yourself, its TAFKARJ!!!

It's about
> why do YOU address Jim Miccolis with belittling endearments when
> >>HE<< has never addressed YOU as anything except your proper name?

Tuff. I'm holding TAFKARJ metaphorically hostage until you straighten
your insane a$$ out. My regrets to Jim. I'll send out for
Schlottskey's deli.

> That scumbag you run with likes to do that. Jim has never
> refered to him as anything but "Len", yet "Len" finds countless ways
> to belittle him.

That would be between the scumbag that I run with and TAFKARJ.

Do you often get involved with other people's issues?

> Lennie does that because he cannot "argue" or "debate" Jim
> otherwise.

He can. He has. And to a reasonable person, effectively. But
TAFKARJ remains in another world. A Ham in a Bubble.

He has to make Jim appear less-than-adequate in order to
> promote himself. The weak minded and the foolish HAVE to do
> that...It's a defense mechanism.

Perhaps. But TAFKARJ has made himself less-than-adequate by altering
posts. It is a cross that he must bear (Mel, forgive me).

> Are YOU that weak minded and foolish?

Don't know.

On a scale of 1 to 10, with 10 being the most weak-minded and foolish,
how high would you rate me?

> He did the same thing with me when he launched into allegations
> of being a "jack booted thug", "Nazi", "elitist", "Dill Sergeant", etc
> etc etc, when I had not so addressed him. He is treated and addressed
> in the same tone and with the same viciousness as he unleashed.

Ahem. I hate to be the one to break it to you, Steve, but you are
just a wee little bit over the top. Ask ANYone!

> Is that how you feel? Do >>YOU<< need to belittle Jim in order
> to effectively express yourself when discussing things with/about him?

Do you need to belittle me in order to express yourself?

Rhetorical question. I already know the answer.

And, no, I don't need to belittle TAFKARJ. Have I done so?

> Please do not humiliate yourself by trying to misdirect this
> question by asking >>ME<< about how I address Lennie...I've already
> answered that.

See above. Why do you need to try to belittle >>ME<<?

> Stay focused...you were asked a direct, specific question.

Which was?

> You CAN answer direct, specific questions, can't you?

If I can recall them.

> > > So WHY do YOU inisist on following the insulting and demeaning

Billy:

My "scenarios" are always built around a simple premise: That there is, in
fact,
a licensed (and CW-capable) radio amateur at the scene of my "scenario," that
he has functional radio equipment at his disposal, and prevailing operating
conditions preclude the use of voice modes such as FM or SSB. I don't recall
making any inference that CW is the "only" mode that can "save the day" ...just
that unless you know the code, you can't use it when you may need it!

Those were air-delivered by Blackhawk helicopters.

The gunnery nurse probably did maintenance on them... :-)

In his Twilight Zone imagination, that is...despite Israel doing the
rescue fighting in the real world.

Getting difficult to tell where the gunnery nurse's thoughts are
these days!

>TSBAKAL? Poor, poor Stebe. Ripping off my style? Go get your own life!

He doesn't seem to have any sort of original life. He freely rips off
others'
phrases and word use and claims them as "his own" later on.

No independent thought. He uses spoon-feeding from the league as
his guide, demanding all do as he did or get called names. Tsk, tsk.

Then he makes all those repeated LYING statements such as
attributing false, very false "motivations" to me. Tsk, tsk squared.

I'm just advocating an end to morse code testing for all radio operator
license examinations...but the gunnery nurse cannot possibly allow
such terrible thoughts against the proud, heroic, noble traditions of
the corps...er, I mean, the Amateur Community! [hard to tell the two
apart in his messages]

It's truly remarkable all that Rage and Frustration demonstrated by the
PCTA in here just for others wanting an end to morse code testing! :-)

He seems to move around a lot and change jobs often... :-)

He only worked a few months as a purchasing agent in a mid-sized
electronics place that made set-top boxes. Must have learned all
about electronic engineering there! He said something to that effect.

He CAN quote from the Physicians' Desk Reference, though. That's
as useful in amateur radio as Kosher dietary laws, religions (outside
of the Church of St. Hiram), and s*x discussions. :-)

Wait! -

Maybe someone HAS put forth a petition in amateur radio similar to
Kosher...establishment of the Orthodox and Mode Laws to be
observed! [Thou shalt use CW on all Orthodox holidays or something
like that...]

Yeah, that's it. Kosher Kode!

Would Morris approve?

>He's out of control. Again.

For the nth time in here.

Notice that the gunnery nurse will slowly crib my phrases and words,
just like he does with yours, then claim them to be his own. :-)

For example, he said that Washington Army Radio has "played host
to amateurs many times" without mentioning when and where. He
really doesn't know but it comes out of his imagination. He's never
had any occasion to communicate with Washington Army Radio,
hasn't been there, doesn't know where it is (if it still exists), or a
single detail of the place.

Washington Army Radio (WAR) doesn't exist as it did a half century
ago. Back then it was a technical tryout area for automatic TTY
relay, techniques that were incorporated into AUTODIN. AUTODIN was
later replaced by the DSN or Digital Switched Network, "the
government's own Internet" and now used by the entire U.S. military.

Messaging over HF does exist but in a much reduced, secondary role, using higher-rate data modes that possible even with the old 100 WPM teleprinters. In the U.S. Army, Signal Brigades world-wide have the capability and do periodic test exercises to make sure they are ready. What my old Signal Battalion became a half century later (78th, under the 516th SigBde located at Fort Shafter) has is an "HF Radio Department." Probably called that for lack of any other descriptive title. :-) That's on the 78th SigBn website. Not much information there.

There's no website for "Washington Army Radio." It was dissolved long before the Internet became public a dozen-plus years ago. Yet, there are hundreds of military websites available at link lists for all the U.S. military branch home pages, including every Army MOS and the headquarters for Military Intelligence (where morse code cognition is taught from computers for M.I. intercepts).

Has the gunnery nurse ever been to WAR, not "hostile actions?" I doubt either. :-) Those are shadowlands in his imagination and fantasies. A twilight zone he can never experience in reality.

But, the gunnery nurse has an Amateur Extra license! So does a seven-year-old. Emotionally they are the same, probably the nod to the seven-year-old as being more mature. :-)

How so, JJ? I'd say that Len was quite correct on this one.

With few exceptions, all of the hams that I know are ragchewers, contesters or experimenters. There are only a couple who actively participate in the local ARES group, and they are the only ones with the rudimentary training to handle an emergency situation without hindering or interfering with it.

In fact, this appears to be the norm in the hobby, from my perspective anyway - only a small percentage are actively involved in this area - the rest, like me, are just in it for the hobby. Why not?

Of course, in an emergency situation, any of us would be willing to pitch in and do whatever we could to help - but the vast majority of us lack the organization, equipment and training that the professional services have. For example, if an earthquake hit your area right now, what would you do? Who would you contact, and on what frequency? Who are the alternates, if he / she is not reachable? Who coordinates what with the various professional agencies? Do you have a preassigned role and duties that you have been trained and have rehearsed for? How about radio equipment - do you have sufficient spare batteries to keep operating during a prolonged power outage (and are they charged and fully tested?), or a generator to keep a base station on the air? Do you have back-up radio equipment in the event that yours fails? If not, how much could you be counted on to be there if needed throughout the entire emergency?

YMM, of course, V.....

What, they don't have the right to talk on CB as you like to enjoy on your ham? With out getting into a flame war over legalities such as linears, extra channels and so on, in my opinion, if the guy is operating per part 95, then he has every right to be on the CB. Your opinion isn't helping the war between CB/Ham. Sorry, I strongly disagree with your opinion. I don't do CB now, but I cut my teeth on it and I know many good and decent CBers.

That's right. Hopefully somebody will find a
way to generate and send "BPLI" (BPL Interference)
via some kind of a handy device right back up
the power line and into the distribution network
out on the pole. If they send it down the power
line then there must be a way to send it right back
up the same, creating standing waves, and fudging
their datastream. You hackers out there need
to get to work on this.

Actually, that isn't quite correct. You've made this latest statement
in response to another's statement. It appears that your goal is to
attempt demonstrating that amateur radio is not something which would be
useful in an emergency. Personally I'd want some amateur gear and a
cellular phone.

> > > Heaven forbid an emergency happens during a contest weekend!

You wrote nothing of amateur radio contests, Brian. I subscribe to CQ
though they are not the only sponsor of amateur radio contests. Do you
know something about amateur radio contesting? Is your contest
knowledge equal to your knowledge of DXing?

Tom,

Buy or borrow a current Element 2 study guide, then go out and find a VE session and take the 35 question Technician class exam.

Are you covered by the blanket "authorization?" (ilo a licence) Yeah, probably...but with $10 and about two days worth of Q&A review, you're covered. Any questions, please use my e-mail address. (Remove NOSPAM) Take care and good luck.

David, I know enough to not use a cellular telephone in an amateur
radio contest. Wherever did you get that idea?

That would be your theory, not mine.

Personally I'd want some amateur gear and a
> cellular phone.

Personally, I try to avoid placing myself in a situation which becomes
an emergency. The next best thing is a cellular telephone, followed
by amateur radio.

Do you see evil in this?

Dave, it is you who lacks complex thought. I enjoyed your little
escapade of bringing a cellular telephone to an amateur radio
contest. Maybe even France will call you. You're still good for a
few laughs.

I find it interesting as well, especially from the perspective that preliminary tests of BPL had concluded that it was way too prone to outside interference (as well as generating it), and the unpredictable nature of that interference rendered BPL unreliable as a practical service.

Evidently, if this case is true, it would seem that the "BPL Pushers" are trying to strong arm radio stations off the air. While CB'ers do not require a license, they are authorized by rule, and if they are in compliance with Part 95, they have every right to operate as if they were any other licensed service.

Cellular phone relies on a lot of infrastructure. Sure, if all the towers are still up and there's power, then it will work. The same applies to our repeaters, but we don't just have repeaters, we can still communicate without them. If the whole area is levelled it will still be possible to use ham radio.

Personally, I don't have a cell phone, so if I lost wired phone service I would only have ham radio to fall back on. Oddly enough, cell phones have not yet spread to every man, woman and child, but I don't know anyone who doesn't have a phone number.

Well, I'm not a lawyer, but it appears to me that the lawyer is wrong. BPL
operates under part 15, which means it must accept all interference.

Agreed, HOWEVER, you must still use your best judgement re. the retention of said attorney. Make sure you enlist the services of a competent communications attorney who is both knowledgeable AND willing to challenge the FCC rather than pander to them.

> >and after
> >looking at the law he advised me that the utility could sue me for because I
> >do not have a FCC license.

Like I said previously, this can be remedied by a day or two with an Element 2 Q&A study guide, (I'll gladly mail you mine.) $10, and a visit to your local VE team. Good luck, although you'll likely not need it. Your ham antenna can also be your CB antenna. My Imax-2000 is used for both 10, 12 & 11. (Some even use it for 20m) Remember, you're anticipating the removal of Element 1 (Morse code) for the Technician class license.

> This is blatant and complete malpractice UNLESS you neglected to tell us
> something, such as
> a) you're operating outside of CB frequencies
> b) you're operating with more than permitted power for your CB frequency

Agreed. Stay straight and fly right and you have a leg to stand on.

> > I will be taking down my CB antenna from the
> >house. The main reason I am not fighting the utility is because of the cost
> >of defending myself in a lawsuit.

Don't do it. That's just what the large utility companies love. The FCC also loves the large utility comapany's dollars so reread what I wrote above re. your choice of a communications attorney.

> Ask your local hams for support. They, like me, would be outraged at a

Some here are understandably skeptical because this newsgroup is commonly sowed with troll posts. Unfortunately you've reaped the results. Even if this were a troll, the only thing lost is a little time and some typing effort. If not, then I hope you heed the good advice that's been offered and prevail.

> There are people with money willing to contibute to a competent defense.
> If you get an attorney who's not a ham,

I cannot impress upon you enough...do NOT hire a ham who is intimidated by the FCC. Hire a competent communications attorney (Who may also be a ham.) who can direct you in the most prudent course of action.

> you have incompetent defense. If
> you want to stand in the middle of the road and let the truck run over you,

I had stated in an earlier post, that so long as he was Part 95 compliant,
he had nothing to worry about.... IF they insist on taking him to court, let
them. He will win in the end "with" the FCC in his corner. They have to

uphold their own R&Rs. Part 95 is one of them, regardless whether a license is needed or not, which by the way - "they" - did away with the requirement of. IF he ends up in court with those people, he could have a nice stock holding when it is all said and done. Suing for legal fees, damages, emotional distress - just for starters. Yep, the lawyer gave bad advice. See someone who knows radio. I'm sure there are many people who would stack up in your corner if this hits the fan. CB or Ham, it affects us all. This is one time we need to stand together. There is no room for separation. United we stand, divided we fall. CL

That's good to hear, sort of. Sadly, it appears that it has become
standard (accepted) business practice to "win the war" by allowing the
smaller individual plaintiff to wage a battle that the larger
defendent will just draw out indefinitely while said plaintiff
literally "dies on the vine." I have seen this up close and personal
and lemme tell ya...it ain't pretty. Justice and truth get thrown
right out the window.

> He needs to get a competent lawyer to explain
> it to all concerned.

I agree and would add that it should be a competent communications
attorney. Grab a Tech ticket, join the league, and ask their legal
department for some guidance. BPL is a pretty hot issue nowadays so I
bet you'll get a serious and concerned response.

I'm not so sure it is the FCC he is going to have to worry about since it was "supposed to be" the Utility company doing the threatening. As for the FCC, so long as the guy is Part 95 compliant, I'd find it really difficult for them to go against their own Rules and Regulations to satisfy someone else. That isn't to say it isn't possible, but it would sure put a lot of mud in their face. Definitely, a "communications" attorney is in need here. IF they shut down a "legal" operation according to their own R&Rs - man I'd have a field day with that in the media. I'd be contacting the local Congressman and anyone else I could muster. But again, I don't think the FCC is the enemy, since (if memory serves me correct) it was not them who made the threat.
I think they too would be interested to hear about this. I mentioned damages in my prior post that he could go after. Sitting here thinking, I'm wondering if the Power Company would go so low as to try to claim he never paid his bill's, or had some problem with the wiring and shut off his service to get even. Man, I'd really ream them out with that, if they forced him into the dark. You may have a real fight on your hands, but so long as you're Part 95 compliant - you should prevail in the end. CL

> Whip certified?

I don't care if it is only five dollars (though I suspect the licensing of those tiny Kosher symbols cost very much more). And I don't care if that breaks down to only one half of one cent for each jar of Miracle Whip. That's money coming from me, and every other American who buys Kosher products, to directly finance the activities of a religion. Several, including you, have said I can instead buy products which are not Kosher certified. Instead, perhaps you or someone else can explain to me why I should even have to concern myself with the activities of a "minority" religion (your word) when I purchase food in this country. Since they're collecting money from the general public, is that religion prepared to publicly account for where and on what that money is being spent? Of course not. Are Americans allowed to opt out of this donation scheme when purchasing products? Not unless they want to give up their favorite foods - something no person should have to do in a country supposedly free of religious dominance.

And that's my final word on this issue. Again, if you don't see the problem with all this, you're not looking and I can't make you see what you don't want to see. Take care.

We do need to stick together in this against a common enemy. CBers have as much right as we do to radiate a signal.

I'm sure that the ARRL doesn't require you to be a ham to join, and they can find a good attorney who will help, maybe even pro bono (free). It won't hurt to ask them.

"They" are free to comment or editorialize as they see fit.

"...out of control"...?!?! Hardly.

A bit too tenacious for YOUR tastes...?!?! I am sure.

Want it to stop? Then YOU stop lying. Stop calling people names. Stop making claims that you can't or won't substantiate with facts.

In otherwords...act like a man, get TREATED like a man. It really is THAT simple.

> >He's out of control. Again.
>
> For the nth time in here.
>
> Notice that the gunnery nurse will slowly crib my phrases and words,
> just like he does with yours, then claim them to be his own.

OK, Lennie...

We already have adequate suspicion that a lot of YOUR alleged
work is plagerized, but now you spread it around...

YOU get to provide some relevent examples of "phrases" I have
"crib(ed)" from you. Go ahead...we'll wait right here...

> For example, he said that Washington Army Radio has "played host
> to amateurs many times" without mentioning when and where. He
> really doesn't know but it comes out of his imagination. He's never
> had any occasion to communicate with Washington Army Radio,
> hasn't been there, doesn't know where it is (if it still exists), or a
> single detail of the place.

What do >>I<< need to provide, Lennie, that wasn't documented
THOUROUGHLY in "QST", "CQ", "73", "Worldradio", etc etc etc...?!?!

And yes, I've copied the annual message from WAR >>AND<< recieved
QSL cards from them for having made TWO-WAY contact with them.
(LICENSED operators can do that, ya know...)...It's called the Armed
Forces Day Cross Band Event.

Ya might have heard about it...At least if you were an ACTIVE, participating Amateur Radio licensee, that is...

> Washington Army Radio (WAR) doesn't exist as it did a half century
> ago...(SNIP)

Who cares?

> Messaging over HF does exist...(SNIP AGAIN)

More irrelevent historical meanderings. I am sure that it would make a great "Radio Trivial Pursuit", but I can't imagine any other applications.

Why don't you submit it to the QPC and see if they won't make an Amateur exam of strictly irrelevent trivial tidbits so you too can qualify for a license...?!?!

> There's no website for "Washington Army Radio." It was dissolved
> long before the Internet became public a dozen-plus years ago.

And I was lucky enough to have "put them in the log" on several occassions in my 32 years of licensed operations, Lennie...

No website needed. Just my radio, and adequate antenna, and valid license.

> Has the gunnery nurse ever been to WAR, not "hostile actions?"
> I doubt either.

You would. At least my "record" doesn't include cowardly attempts to embellish my service record with associations with soldiers who died three years before I was in-theater...Such as YOU did...

> Those are shadowlands in his imagination and
> fantasies. A twilight zone he can never experience in reality.

Ahhhh, but Lennie...I WAS there...on the radio...as LICENSED operators can be...

> But, the gunnery nurse has an Amateur Extra license! So does a
> seven-year-old. Emotionally they are the same, probably the nod to
> the seven-year-old as being more mature.

I am sure you'd think so...

Please remind us of your experience in raising children of ANY age...

And please remind us of how many times YOU operated a radio at, with, for or to WAR, Lennie...?!?!

(Geeze...this scumbag makes it easier every time....)

Stepped in it again, Lennie...

Ya wanna try to dodge this one based upon some typos again...?!?!

Steve, K4YZ

I never had that idea, William/Brian. You wrote nothing about an
amateur radio contest.

That is simply incorrect, William/Brian. I made no attempt to disparage
amateur radio's role in an emergency. I leave that to the tag team of
"Len or Lenda".

> Personally I'd want some amateur gear and a

Please point out the portion of your original statement which contains
anything about an amateur radio contest.

> Maybe even France will call you.

I've often received calls from France, both on the amateur bands and on
the telephone.

> You're still good for a
> few laughs.

The laughs, as usual, appear to be on you. I'd love to hear more of
your amateur radio contesting exploits. I'd probably pick up a tip or
too.
Your insight into DXing was extremely valueable.

Dwight,

I wish you could see your statements for what they are: pure, simple
religious prejudice. Good luck on picking through foods at the
supermarket in an effort to choose only those products not tainted with
that "kosher" symbol.

You might want to avoid films and newspapers and TV networks too. You
know who controls Hollywood, TV and the news media, don't you? I'm sure
that you're somehow paying extra for those too. Jews likely get a
discount on newspaper subscriptions, cable TV bills and on theater

tickets. The rest of us just pay and pay and pay.

If you can't cover your house in aluminum foil, at least wrap your Christian-type food in it.

Now back to the interfaith morse code wars.

Don't forget "nursie" and being addressed by the wrong gender.

> He is treated and addressed
> in the same tone and with the same viciousness as he unleashed.

And you have provided the exact response desired.

By responding in kind, you have lowered yourself to the level of the
very people you oppose, and (in their minds) given them the OK to
continue to behave that way.
>
> I have a problem with you lying.

Do you think that such lies will ever be admitted? For example, I have
been
accused of altering Kim's posts - which is not what happened at all.
>
> I have a problem with you following in the footsteps of a person
> who is a known pathological liar and antagonist. It's embarrassing to

> even further cementing your reputation.

Then why bother, Steve? Haven't you seen enough examples to know what the
responses will be? Don't you already know that your questions will not be answered?

There's a reason for killfiles and filters. I find my
rrap experience to be much better for the use of them.

You've got kids, Steve. Haven't you had the situation where a kid argues with you about bedtime - at bedtime? By arguing with the kid, bedtime effectively becomes later because the kid isn't in bed when s/he's arguing. But if you refuse to argue, you get less of a hassle.

Dee's (or was it Dave's?) metaphor of the landfill and the fence is very appropriate.

"[their] hobby is wasting time. Your time."

Free speech doesn't mean you have to listen to what everyone says.

It may have to do with cross-contamination. There is a line in the
Bible which says "thou shalt not seethe a kid in its mother's milk"
from which much of the meat-dairy separation evolved. "Kid" expanded
to mean any meat, "milk" to mean any dairy product, and "seethe" to
mean any cooking, and eventually any food combination.

Only if it doesn't affect buyer behavior. If buyers protest with their
dollars, things will change.

> In the long run, those currently
> cheap off shore labor markets will self adjust upwards.

Maybe. And if so, might they not find themselves in the same boat?

> In the short
> run, US labor has their head in the sand if they think there's something
> either party (Dems or Reps) can really do to stem the shift of

OTOH, unemployed workers can't buy the goods anyway. So what good are
lower prices?

> In the long run, employees must be constantly reevaluating their
> job skills and looking at the prospect of how vulnerable their job
> may be as to their job being farmed out to off shore labor.
>
That's true up to a point. But how often is it reasonable to expect a
person to retrain? And what happens to "the wealth of nations" in the
meantime?

I don't know of any country that grew prosperous on a service economy
alone.

If it were up to my interpretation, and it isn't, I would have though
that more of an admonition of what would be a mentally cruel thing to
do, as opposed to what it turned out to be interpreted as, which is a
double or triple interpretation.

We are talking about a utility company. Not a ham radio station. A utility company can not just experiment when and where they want.

Cry about what? The NPRM from the FCC says that the utility company will
have to take steps to stop any interference to licensed stations.

I am a licensed station....any other questions?

Look in the 380 mHz range, but it is not always there, nor in the
100 - 400 mHz range. There is an additonal frequency range
being used sporadically.

There's a version of BPL that uses the microwave spectrum. Hopefully
this is that.
Bad news for our microwave hams, but not so bad for HF users, if true.
1Mb over
HF seems unlikely.

BPL will eventually suffer from the same problem common to shared medium
systems. Just ask the cable companies - they know.

For quite a few years, the phoneline networking standard has been
delivering up to 10 Mb/sec by using a residential telephone line
(http://www.homepna.org/products) to carry a fraction of the HF
spectrum.

1 Mb/sec seems to be *easily* achievable at HF. It's already
been done.

You just brought back some memories, Bill. Way back in the early '60s I had a couple of those Ameco Study Guides.

I took some of those early tests (the ones before 1984) but I find it hard to remember their level of difficulty sufficiently to make a reasonable comparison. I took the first of them as a pre-teen, a few in the mid-70s, and then re-took the whole smear in 1988.

While I remember that the tests for Novice and General were of the multiple guess kind in the '60s (albeit at an FCC Field Office), I could swear that I remember that drawn circuit diagrams were required at least for the Extra written exam, if not the Advanced. This from the study guides that I had for the tests.

Of course, it's absolutely true that a test can be made harder by the depth that the test goes into, but breadth can also make for a hard test. What I remember of the tests I went through back in the 60s was flying through them all, acing the Novice and missing 2 questions on the General.

Code has never been a problem for me. The only problem I would have with a 5 wpm test is that it's too slow. For me, the 13 wpm is too slow. I find 15 wpm a slow minimum comfortable speed, with 25 at optimum. This is for me, and I realize that others don't find it so and never will.

Amateur Radio Newslin(tm) Report 1385 – February 27, 2004

Amateur Radio Newsline report number 1385 with a release date of Friday, February 27, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Another proposal on restructuring and more on the fight against B-P-L highlight Amateur Radio Newsline report number 1385 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: A COUNTER PROPOSAL TO THE ARRL

Just as we all thought it was quieting down, restructuring of the United States Amateur Radio Service is front and center once again. This, as a small group that opposes the quantity over quality approach takes a massive counter proposal to the FCC. The group is headquarted in Florence, Alabama and Amateur Radio Newsline’s David Black, KB4KCH, is at our South-East Bureau in near-by Birmingham, with more:

--

Robin Gist, K4VU, listened to the ARRL’s plan to restructure amateur radio and didn't like it.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

Gist and five other hams who make up a group called the Radio Amateur Foundation, drew up their own plans for restructuring ham radio. Their 59-pages of suggestions are now in the hands of the FCC. Gist calls the Foundation's petition a comprehensive plan for progressive and thoughtful restructuring. The group suggests taking the Technician class license, making a few changes, and turning it into amateur radio's entry level license. Gist is not pleased with the League's plans for the Technician license:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

The group suggests giving Technician class hams restricted HF privileges. And it strongly advocates keeping the code--5-word-per-minute Morse code proficiency would be maintained for General and Extra class licenses. Keeping Code, Gist says, is important to help amateurs provide emergency communications.

Under the foundation's proposal, the Novice and Advanced licenses would no longer exist. Current Novice and Advanced license holders would automatically be upgraded to the next category--a novice would become a Technician and an Advanced class ham would become an Extra.

Another big change comes in amateur radio testing under the Foundation's plans.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

The Foundation suggests not releasing question pool questions to the public.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

Gist believes hams should have to wait at least 10 days before taking a failed amateur radio license test again.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

Gist says amateur radio should be quality over quantity. A service of radio operators who have a sense of value and appreciation for amateur radio. That is what Gist says the Foundation's goals are really all about.

From the Southeastern Bureau in Birmingham , Alabama, I'm David Black, KB4KCH, for The Amateur Radio Newsline.

--

While there are well over a dozen restructuring proposals already before the FCC only one has really gotten any major attention of the ham radio community. That’s the plan offered up by the A-R-R-L and referred to by Gist. As we go to air, no Rule Making designation has been assigned by the FCC to the Foundations regulatory change request. (QRZ.COM, ARNewsline(tm))

**

THE BPL FIGHT: WHAT HAMS CAN DO

Meantime, the story that refuses to go away has yet some new twists. Of coarse we are referring to the imminent introduction of Broadband Over Powerline Internet access, and the massive interference that ham radio operators believe it will create. Amateur Radio Newsline’s Mark Abramovicz, NT3V, is here with the latest:

--

Now that the FCC has released the Notice of Proposed Rulemaking in the Broadband Over Powerlines issue, it's time for amateurs to look it over, digest it and begin composing a well-reasoned letter or e-mail.

So says Jim Haynie W5JBP the American Radio League's president. Here are some things in the filing you might consider.

"Noise levels, potential interference both ingress and egress. Those are things that need to be addressed, " Haynie says. "Public relations: What's going to happen when you get on the air on 20 meters and you knock 10 of your neighbors off line all of sudden? They call the local power company, it's a public relations nightmare."

Haynie says once you decide to write that letter, keep in mind it has to be supported with facts.

"I don't see much water being drawn if somebody writes a letter and says, 'Well, this is good for this and it's good for that and it's going to interfere with my ham radio hobby and stuff.' I never, ever use the word hobby to anybody in the Washington. It's the Amateur Radio Service," Haynie says.

"And what you've got to do is use a little bit more fact, a little bit more of concrete-type evidence that you can conclude on your own. And that's pretty simple to do. It's got to be well-reasoned arguments. It can't be emotional argument."

And, once you've finished the letter or e-mail, Haynie says make a copy or print a copy of what you've prepared.

"Put it in an envelope with your QSL card and send it into your local representative at his district office, not in Washington but his district office," Haynie advises. "I'm just amazed how much power that letter has to your local congressman and your local senator when you mail it to one of his local district offices."

Haynie continues to express disappointment the FCC failed to wait for a report from the National Telecommunications Information Agency. The agency oversees radio spectrum use by government agencies and services, including the military. He says its technicians have been busy at BPL trial sites across the country.

"We know that they've done over 18,000 measurements over the last four months in the various (BPL) test areas," Haynie says. "We have gotten actually photographs of their trucks, we've seen them working hard at it. And that's what surprised me that the commission rolled this out before the information was made available.

"We were told by NTIA that it would be available the first part of this year. Now in government-speak, I don't know what that means. I know we got, the League's got petitions sitting up in the commission now since I took office as president in 2000. It is 2004 and they're still sittting on somebody's desk.

"So, FCC and NTIA, I'm sure, have their own timetables and they're not going to worry about what the ARRL or what some ham radio operators think about it. They're going to do their own work in the own way in their own time."

Haynie hopes the NTIA finishes its work soon and gets its report to the FCC pronto. He says it's clear BPL is targeted for special FCC attention.

"I think they'll put this on the fastest of fast tracks and get something going," Haynie says. "Typically, the window, the comment window will be 45-60 days. I'd be really surprised if they gave it 90 days.

"And, once that's done they start the wheels in motion and they'll (FCC) be under tremendous pressure from industry to get this thing out the door."

Haynie says the amateur radio service has allies in this fight and he's confident they will submit comments or speak to their congressmen or senators. Haynie says he's both cautious and optimistic about the outcome.

"I'm very concerned because I've seen the speed at which this thing has happened," Haynie says. "And I've seen the comments that the commission has made and I've seen the denials that the industry has made.

"And it just doesn't make sense. There's something more behind this. And I know people are going to say it's the almighty dollar. And that's true, it probably is. You're looking at millions and millions and millions of dollars of investment here.

"But there's something that just doesn't smell right, I guess, is what I'm trying to say. So, until I get a better handle and the League - our staff people get a better handle on where this is going and trust me we're on top of it every day - I'm just going to be to on the little plus side of a little cautious."

And finally, Haynie says to those who think the ARRL and other hams are overreacting like Chicken Little who cried out: The sky is falling! The sky is falling! He has these sobering thoughts.

"Just because we want, doesn't mean that we get our way. And I'm concerned about that," Haynie says. "And I'm concerned about another possibility that's probably the horror of all horrors.

"And that is if the (BPL) rollout is so big and you get tens of hundreds of thousands of people on, suddenly amateur radio relegates down to the same level as Part 15. That would be the most horrible thing that could happen to amateur radio."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

To read or download the Notice of Proposed Rulemaking from the FCC on Broadband over Powerlines, you can find it on the FCC's website: www-dot-fcc-dot gov. And, to learn more more about the ARRL's position, go to www.arrl.org. (ARNewsline(tm))

THE BPL FIGHT: A WIN IN 4X4-LAND

Even though the BPL outlook looks a bit grim here in the United States, there has been a big win over in Israel. Hagal International says that equipment for the networking of computers over the A C power mains being sold in the country was found to be causing interference to High Frequency spectrum users. As a result, Israel’s Ministry of Communications requested an explanation from the distributor of this equipment on how to remedy the problem. The distributor did one better. The company replied that it had discontinued the sales of the interfering devices. (Hagal International)

RADIO HONORS: W. VA GOVERNORS FATHER WA8AYP REMEMBERED

Here in West Virginia, Governor Bob Wise strolled into his reception hall last week to present a check to Kanawha County officials. Little did he know that those officials – and some amateur radio operators – had a very special surprise for him.

The money, fifty thousand dollars, was awarded to the county for the purchase of amateur radio equipment for the metro area’s new emergency operations center, and a new mobile command post.

As he usually does when speaking about amateur radio, Governor Wise began to reminisce about his father. He recalled hearing the sounds of CW from his father’s Hallicrafters receiver wafting into his bedroom at night. He even remembered his father’s amateur callsign, WA8AYP. At that moment, his attention was directed to a nearby FT-847 to receive a message.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

That’s control operator Bill Hunter, K8BS, telling the governor via amateur radio that his father’s callsign is now the club callsign of the Kanawha

County ARES/RACES group. The announcement was not only a complete surprise, the governor appeared clearly touched. After a moment, he quipped, “Hey, do I get a QSL card for this?” He was quickly presented with a specially designed QSL card. After the ceremony, the governor signed copies of those cards, and posed for pictures with the estimated 75 ham operators in attendance.

The surprise was the brainchild of Kanawha County Commission President Kent Carper, W8CHS, who appears to be one politician who can keep a secret.

Robert Wise, Senior became a silent key in 1986. He was active in emergency communications during the 1960’s and 70’s. (ARNewsline(tm))

**

RADIO HONORS: FCC NAMED TO RECEIVE NCAI LEADERSHIP AWARD

The FCC has been named by the National Congress of American Indians to be the 2004 recipient of it’s prestigious NCAI Leadership Award. The regulatory agency was selected based on its outstanding leadership and ongoing commitment and support to American Indians and Alaska Natives.

The National Congress of American Indians gives only three of these awards annually. One goes to Congress, one goes to the Administration, and one goes to another deserving entity. This year's recipients are House Natural Resources Committee Chairman Richard Pombo of California, the US Commission on Civil Rights, and the FCC. (FCC)

**

HAM RADIO TESTING: QPC WITHDRAWS A GENERAL TEST QUESTION

The Question Pool Committee of the National Conference of Volunteer Examination Coordinators has announced the withdrawal Question G5B11 from the Element 3 General class question pool. The QPC says that the question deleted asked what would be the RMS voltage if you combined two or more sine wave voltages?

According to QPC Chairman Scotty Newstadter, W4WW, the withdrawal refers to question G5B11 in the new, December 1, 2003, released General pool. It is not referring to the same numbered question in the pool that expires at midnight, June 30, 2004. (QPC, W4WW)

**

ENFORCEMENT: JACK GERRITSEN, EX-KG6IRO IN JAIL

Californian Jack Gerritsen, the ex-KG6IRO, will be spending time in jail, but not for his alleged interference to ham radio repeaters in the Los Angeles area.

On Monday, February 23rd, Federal Court Judge Carolyn Turchin sentenced Gerritsen to 30 days in jail and ordered him to pay a $2500 fine on a tresspassing charge. In passing sentence, judge Turchin explained that she could not place Gerritsen on formal probation as the U-S Attorney asked, because he was going to spend his entire sentence in jail with no time left for

probation. The Judge told Gerritsen that he has until May 15th to pay the fine or a lien will be placed on his home in the city of Bell.

Gerritsen’s alleged harassment of area repeaters had brought numerous letters to the court asking that it bar him from operating any sort of radio transmitter. In a statement to the court Judge Turchin noted that she had read many of the notes sent to her by the amateur community but that she would not be able to take them into consideration for this case. This was because the charges were brought because Gerritsen failed to obey a sign in the Courthouse and entered a door to the roof of the building.

Judge Turchin did say that she she would forward all the letters to the Federal Probation Department to be put in Gerritsen’s file. The ex-KG6IRO was then taken into custody by U.S. Marshals and escorted away. (ARNewsline(tm))

**
WITH THE ARRL: LEAGUE LOOKING FOR COMMENTS ON VHF+ CONTESTING

The ARRL is looking for input from VHF and UHF contesters to help improve the radiosporting events they take part in. According to a posting top the VHF Reflector by New England Division Director Tom Frenaye, K1KI, for the last year or so the League has been studying ways to increase interest and participation in VHF and above contests and awards. Now its ready to go further and it is inviting the ham community to take part. We have more in this report:

--

Tom Frenaye, K1KI, heads up the ARRL's VHF-UHF Contest and Awards Subcommittee. He says that changes to the contest rules and awards programs should be designed to do three things. First, to encourage more people to work more other people. Second, to bolster the number of QSO’s made over longer distances. And lastly, to encourage more people to just join in and participate.

Because of this, there are now some recommendations coming from those in the ARRL who have studied the situation. These incclude making changes in the QSO points and rover rules. Also under consideration is limiting the June VHF QSO Party to the bands from 50 to 1296 MHz only, expanding the Microwave contest based on 10 GHz Cumulative and dropping the current UHF contest. Added would be new contest categories in January, June and September.

Frenaye notes that these major recommendations, and a number of minor ones, are still just that -- recommendations. He says that the ARRL feels it is now very important to have further input from the VHF and above contest community before proceeding. He asks all contesters interested in these bands to take an in-depth look at the preoposed changes and then to respond. He hopes that a lot of you will.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP, reporting.

--

You can e-mail your ideas and comments on or before March 7th to vhf-contest-proposal@arrl.org. (K1KI via VHF Reflector)

**

CW SAVVY: A MORSE CODE SYMBOL FOR THE "AT SIGN"

Computer fanatics who also like operating C-W listen up. Radio Currents Online for February 16th says that the International Morse Code is being updated to include a new character for the "at sign". In December, the International Telecommunications Union voted to create the character which will be known as a commat. The commat is made up of dot-dash for the letter A and dash-dot-dash-dot which we all know is the letter C. The two characters are combined with no space between them giving Morse code web surfers an easy way to send an e-mail address or the location of a webpage. (CGC)

**

CONVENTIONS AND HAPPENINGS: THE QCWA 2004 HAMVENTON DINNER

On the convention scene, word that the Quarter Century Wireless Association will hold its 2004 Hamvention Banquet at 7:30 p.m. on Friday, May 14th. Hosted by hosted by South West Ohio Chapter 9 the location this year is Alex's Continental Restaurant near the Dayton suburb of Miamisburg. Cost per person is $ 17.00 and advance reservations are required. Send requests and payment to Jerry Ragland, 409 Park Avenue, Franklin, Ohio, 45005. (QCWA)

**

ARRL SM ELECTIONS: THE RESULTS ARE IN

Turning to names in the news, word that Patrick Bunsold, WA6MHZ, has elected as the ARRL San Diego Section Manager in the only contested election this winter. Bunsold received 378 votes and his opponent, Stephen Early, AD6VI, garnered only 258 votes.

Election ballots were counted February 24 at ARRL Headquarters. Bunsold's two-year term of office begins on April 1st. All other Section Managers standing for re-election ran unopposed. (ARRL)

**

NAMES IN THE NEWS: THE OTHER SIDE OF THE CONTROL ROOM GLASS

And Amateur Radio Newsline President and Producer, Bill Pasternak, WA6ITF, is now the author of a new column dealing with ham radio operators working in the broadcasting profession appearing on the famed HalEisner.Com website.

Bill’s calls his commentary “The Other Side of the Control Room Glass.” It tells the stories of famous and no-so-famous people in the broadcast profession who share a common interest in Amateur Radio and the way in which being a ham has affected their careers.

The column began on Sunday, February 22nd with the first of a 4-part tribute to the late Roy Neal, K6DUE. This series will include a retrospective on Neal’s successful effort to put a manned Amateur Radio station into space.

“The Other Side of the Control Room Glass” becomes a monthly feature of the website in April. You can read it on-line at www.haleisner.com

(ARNewsline(tm))

HAMS HELPING HAMS: THE MIKE NEWBOLD, K0YO FUND

A fund to help 6 meter rover operator Mike Newbold, K0YO. It was set up by a group of hams who value Newbold's contributions by putting his life on-the-line to get rare grid squares on the air. And late last year it almost cost him his life. Bruce Tennant, K6PZW, has the rest of the story:

--

According to a posting on QRZ.com made for Phil Krichbaum, N0KE , Mike Newbold, K0YO, was vacationing in Baja Mexico just before Christmas 2003. He was savagely beaten with a pipe, robbed and left for dead. The same thugs also killed two Canadian surfers who were camping about 100 yards away from Newbold and threw their bodies and those of their dogs over a cliff.

Kirchbaum says that Newbold crawled 3 kilometers on his hands and knees through cactus and over rocks to a road where he had a better chance of being located. Some surfers from Los Angeles found him the next day. They took him to a medical facility and contacted the police. They then transported Newbold back to California for further medical treatment. Newbold then went back to Steamboat Springs, Colorado, where his son took him for additional medical care and then home for a Christmas eve dinner. Kirchbaum says he has since visited Newbold brought him a 2 meter F-M radio donated by Bob Ludtke, K9MWM. Thats where he learned that the value of items lost and stolen in Baja easily exceeds $10,000.

To help defray the cost of replacing Newbold's pick-up truck, camper and ham radio gear that he and Gary Yantis, W0TM have established he Mike Newbold Fund. If anyone would care to make a donation to help get Newbold back on the road to rare grids, please contact W0TM or N0KE. Their respective e-mail addresses are gyantis@midtec.com and pfkski@vail.net.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

You can read more about Mike Newbold, K0YO, and what happened to him on-line on line on the newspages at www.qrz.com (QRZ.COM)

**

HAM RADIO IN SPACE: SUCCESSFUL OHIO ISS CONTACT

Friday, February 20th was a great day for youngsters at Ohio's Glenwood Elementary School. That's when International Space Station Commander Mike Foale, KB5UAC successfully answered questions from a number of students. Better yet, Bill Chalkin, KA8VIT, in nearby South Euclid was listening and recording. Take a listen to a ham radio from space:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

In all, sixteen students got to question KB5UAC about life on-orbit. According to the AMSAT News Service preliminary reports indicate the space station side of the conversation was heard as far East as Boston and Baltimore. (AMSAT, ARNewsline(tm) with audio from KA8VIT)

**

INTERNATIONAL - WORLDWIDE: NO RECIPROCAL 5 MHZ OPERATIONS

Turning to international news, a reminder that holders of United Kingdom 5 MHz operating permits are reminded that CEPT international operating rules does not apply to 5 Mhz. The only countries currently allowing 5 MHz operation by individual stations are the United Kingdom and the United States. Only club stations are presently being allowed to use 5 MHz in Finland and operations by stations in Norway and New Zealand are for internal emergency communications purposes only. Stations in Canada may use 5 MHz frequencies at agreed specified times but activity from Germany is not currently permitted. (GB2RS)

**

ON THE AIR: FIELD DAY 2004 - JUNE 26-27

Turning to operating events, the ARRL Letter says that rules and entry packets for the 2004 running of ARRL Field Day now are available on the League's Website. The ARRL Letter notes that Field Day is always the fourth full weekend of June. This year it's June 26th and 27th with activity beginning at 1800 UTC Saturday and ends at 2100 UTC Sunday.

There are no rules changes from 2003. Participation in Field Day now is open to all amateurs within IARU Region 2. Field Day stations may contact stations in other regions for point credit, but stations outside Region 2 are not eligible to submit entries for this event.

More information is on-line at www.arrl.org (ARRL)

**

DX

In D-X, I2YSB, I2MOV, IK1AOD and IK2DIA, have been on the air from Tokelau signing slash ZK3. They now say that they plan to be active portable 5 W from

Samoa on all bands and modes between the 29th of February and 8th of March. Look for them on the usual D-X frequencies. (GB2RS)

Also, K4ISV and K4CN will be active slash VP5 from North Caicos Islands through the 17th of March. They will also participate in the CQ 160-Metre SSB contest as VP5B. QSL as directed on the air. (GB2RS)

And a Galapagos Islands "HC8/HD8 DX Diploma" is now being issued by the DX-TA-SEA DX Club. This multicolored certificate is awarded to Amateur Radio operators and short wave Listeners for confirming a minimum of 3 different HC8 or HD8 stations in the Galapagos Islands. All contacts or SWL reports made after November 20, 1945 are eligable. Submissions and information requests go to Dr. Rick Dorsch, NE8Z, P.O. BOX 616, Hamburg, Michigan 48139 -0616 (NE8Z)

RADIOSPORTS: HES OFF AND WALKING

He’s on the road again. We are talking about Tony Whitaker, G3RKL, who is off on his latest trek. Amateur Radio Newslie’s Jim Meachen, ZL2BHF, has the details:

--

His short walk has begun!:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

That’s the voice of Tony Whitaker, G3RKL, as he begins his pre-announced trek from Invercargill to Blenheim. What’s amazing is that recording comes to you from the other side of the world. From the United Kingdom, where it was recorded by Ian Abel, G3ZHI, in Yorkshire England. How? Through the magic of Internet linked repeaters that will allow the world of Amateur Radio to follow Tony’s almost every step of the way:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

During his stroll Whitaker will be on the air using the special callsign ZL6SHS. And -- you will literally find him operating everywhere including HF, VHF and UHF. And when access to an IRLP or Echolink equipped repeater is available, he just might pop up in your back yard, eager to say hello.

So, keep an ear open for Tony Whitaker, G3RKL, as ZL6SHS as he jauntily saunters the length of New Zealands South Island. He might be coming to an Internet linked repeater in your hometown and right to your H T.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

With thanks to Ian Abel, G3ZHI, for the audio of Tony’s first few minutes on the road, I’m Jim Meachen, ZL2BHF, reporting from Auckland, New Zealand for the Amateur Radio Newsline.

--

With access to Echolink and IRLP now quite common you can expect to hear more from G3RKL here on Newsline in the coming weeks. (ARNewsline(tm) with audio supplied by G3ZHI)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the newly created Roy Neal, K6DUE, Amateur Radio Mentoring Project is up and operating. We already have signed up over two dozen hams who are willing to assist others. If you can help, or if you need assistance please drop a note with your name, address, hone number and area of expertise to mentor@arnewsline.org and we will get back to you as fast as we can.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Damron, N8TMW, and I’m Jeff Clark, K8JAC, saying 73 and we thank you for listening."

> those tiny Kosher symbols cost very much more).

Why do you suspect that?

> And I don't care if that
> breaks down to only one half of one cent for each jar of Miracle Whip.

Well, let's see...

SWAG:

10,000,000 jars of MW per year

$10,000 annual certification cost

Works out to a tenth of a cent per jar.

> That's money coming from me, and every other American who buys Kosher
> products, to directly finance the activities of a religion.

No, it isn't.

It's money to directly finance a *choice* made by the food
manufacturer. Just like your money goes to pay for their *choice* in
advertising, label design, jar size, etc., etc.

> Several,
> including you, have said I can instead buy products which are not Kosher
> certified.

Are you saying you cannot find such products? I find that very hard to
believe.

If it bothers you so much, why not just buy the noncertified products?

> Instead, perhaps you or someone else can explain to me why I
> should even have to concern myself with the activities of a "minority"
> religion (your word) when I purchase food in this country.

First off, all religions in this country are "minority". (Christianity isn't a religion per se; it's a whole bunch of religions that have certain things in common).

Second, the reason you have to concern yourself with such things is because we have at least a partially free market in the USA. Producers put various products on the market, and customers choose which ones to buy. The govt. has certain labeling standards to insure that customers can make informed decisions, and in the case of food certain standards for health reasons. The rest is left up to the marketplace.

If a manufacturer *chooses* to go after various additional certifications, (kosher, organic, low-fat, Atkins, etc.) it's totally voluntary.

> Since they're
> collecting money from the general public, is that religion prepared to
> publicly account for where and on what that money is being spent?

The religion is not collecting any money from the general public. The manufacturers are selling their products, and in turn paying a fee. "The general public" can choose to buy or not buy any product on the shelves.

> Of course
> not. Are Americans allowed to opt out of this donation scheme when
> purchasing products? Not unless they want to give up their favorite foods -
> something no person should have to do in a country supposedly free of
> religious dominance.

You're simply way off base on this, Dwight. The market decides such issues, and you are not enough of the market to force a change. Most of the market accepts the tenth of a cent per jar. I personally *welcome* the certification, because it means there's another level of inspection going on.

I'm trying to figure out exactly how you want things to work. It seems to me that what really bothers you is all those kosher products occupying the same shelves as noncertified products.

Here's what I see as your solution:

If Dwight had his way, most products would *not* be kosher certified. No Ks or Us or pareves on the "mainstream" products in the supermarket.

There could, however, be a special aisle for the kosher stuff. It would be marked "KOSHER" in big letters so that nobody would accidentally or unintentionally buy something kosher.

Exactly how all of this would be forced upon the food industry is unclear. It would probably take government intervention to make Dwight's wishes come true.

Of course, all of this would mean that many products would be made in two versions. There would be kosher Miracle Whip and "regular" Miracle Whip. The kosher versions would cost more, of course, because of the added cost of certification and maintaining a separate manufacturing line, labeling, distribution, etc.

The Law of Unexpected Consequences, however, dictates that such a setup will also cause the price of *uncertified* Miracle Whip to rise, too, because the volume would be split and the higher costs would have to be passed on.

Marketing/Econ 101 dictates that if it were cheaper or more profitable to make separate products, outfits like the makers of Miracle Whip would do so. That they choose to get the whole production certified rather than make two varieties proves the point.
>
> And that's my final word on this issue.

We've heard that one before.

> Again, if you don't see the
> problem with all this, you're not looking and I can't make you see what you
> don't want to see.

I *am* looking, Dwight. I just don't see what your problem is. It seems that you want to force separation of church and food in a supposedly free marketplace. You want to force private companies (food manufacturers) to *not* certify foods as kosher in order to satisy *you*. Not the government - private companies.

The solution is really simple: If you don't want to buy kosher certified foods, just don't buy them. They're all labeled for your convenience.

But please don't try to sell the rest of us a load of stuff about "pushing" and "manipulating". And please get used to the fact that the various flavors of Judaism are "mainstream" religions in the USA - just like most of the various flavors of Christianity.

I don't know if it's still true, but some time back when airlines actually fed coach passengers meals on the airplanes, I recall that passengers could request special meals ahead of time. Low salt, diabetic certified, vegetarian, and (you guessed it) kosher. And in at least some cases this was done for no extra charge.

In article <LzG1c.32564$hm4.24684@newsread3.news.atl.earthlink.net>, "Dwight Stewart" <stewartx@NOearthlinkSPAM.net> writes:

>That's money coming from me, and every other American who buys Kosher
>products, to directly finance the activities of a religion. Several,
>including you, have said I can instead buy products which are not Kosher
>certified. Instead, perhaps you or someone else can explain to me why I
>should even have to concern myself with the activities of a "minority"
>religion (your word) when I purchase food in this country. Since they're
>collecting money from the general public, is that religion prepared to
>publicly account for where and on what that money is being spent?

After writing my response to the above, another thought came to mind.

Consider the following example:

Actor/director/producer Mel Gibson is a Roman Catholic - not only that, he's a very conservative one. It's a pretty safe bet that he's a generous contributor to his church. Of course there's nothing wrong with that - it's *his* money!

And it's a safe bet that certain percentage of the price of ticket to one of his movies, or a recording of same, will wind up in Mr. Gibson's pocket. Again, there's nothing wrong with that - it's part of his contract.

But that means that anyone who goes to Mr. Gibson's movies is indirectly funding the Roman Catholic Church. Buying a copy of Mad Max on DVD means that a few pennies may wind up in the Vatican coffers.

Mr. Gibson is not unique in this regard by any means, of course, I just use him as an obvious example. There are many others. And I think there's nothing wrong with any of it, even if I don't believe in their religions.

But if you follow Dwight's argument on this, I should somehow be upset.

I openly tell you that I run an S-Line Collins on the freeband, but
never AM, cuz the S-line don't have it.<yea> I've also told you what
antenna's I run, my full name, and the town I live in.

I've also told you I don't have neighbors around me, so no one ever
complains about rfi. My gear runs clean, I've also told you I can
watch tv with the rabbit ears in the shack at 1K. Collins rocks.

You keep re-posting what I admit too, is this a new strategy or
are you stupid?

I almost forgot to add, I'll be one of the last guys to have
to contend with bpl, we don't even have sewer out here yet,
but we have fiber optic cable and dsl. Yuppie land will suffer
first. (back on topic now)

Correct! I have alway though that the best argument for what is going
on is the elevation of a population's living standard. A country has a
low standard of living, and the workforce is available for next to
nothing, wage wise. So like Pizza take-out's in a college town, everyone
ant their brother migrate there for the cheap labor. AS the standard of
living goes up, the cheap labor starts to demand more in salary and/or
benefits. This works for a while, but eventually another poor country
looks attractive to employers. So they move on to the next poor country.

Examples are what has happened to Japan. Korea is the present hot spot,
but is slowing. China is ascendant now, but the inevitible will happen
there. Mexico is now experiencing import concerns too.

What happens when the cycle is complete, and the last third world
nation is brought up to modern standards will be the interesting thing.

>>In the short

You see, the big trick is to have all this happen without ourselves turning into a third world country. See below.

Countries that are service based economies are the *servants* of other countries.

We can "reality" each other all day long, but if economies chase the almighty profit without any moral guidance - that is if they are not in business for the sole purpose of making a buck, then disaster is the result.

There's no sign that any sufficient number of folks in
the USA are going to boycott non-USA made products
or spend N dollars more to get a product "made in the USA'
as opposed to buying a cheaper imported product.

> > In the long run, those currently

You retrain whenever it becomes necessary. There's nothing
mystical about it. If your job skill goes wanting, you'd
better find another skill set.

> I don't know of any country that grew prosperous on a service economy
> alone.

We still manufacture and produce in the USA, it is just
done with more and more automation resulting in less
and less need for skilled labor.

Cheers,
Bill K2UNK

Good grief no! It doesn't finance a religion. Did you ever see the
"Reg. Penna Dept Agriculture" on labels? It is a standard, nothing else.
You want to sell it in PA? Make it to our standards. You want to sell it
to Kosher Jews? Make it to their standards. The irony in all this is
just how few completely Kosher Jews there are. But many people look for
the standard because it is a good standard. I do and I am neither Jewish
nor religious.

> Several,
> including you, have said I can instead buy products which are not Kosher

For the same reason you should concern yourself with products
acceptable with the State of Pennsylvania when you live in South
Carolina. For the same reason you would want to buy USDA certified beef.
They set a standard of quality.

> Since they're
> collecting money from the general public, is that religion prepared to

What money goes back to the Jewish religion and who gets it?

> And that's my final word on this issue. Again, if you don't see the
> problem with all this, you're not looking and I can't make you see what you
> don't want to see. Take care.

Maybe all the standards should be thrown away. That way you won't have
the government on your back, ala the USDA, and you won't be supporting
those people in pennsylvania either! ;^)

Sorry. One Megabit data rates over "residential telephone lines"
that INCLUDE already-installed telephone cables and switching
centers in the transmission path is NOT a given everywhere.

Higher-than-1-Megabit rates are possible with "category" cable
and special terminal transceivers for IN-Home networking. That
is NOT the same as the BPL under discussion.

Radio amateurs cannot "just experiment when and where they want."
The amateur radio regulations of Part 97, Title 47 C.F.R. clearly
outline the technical requirements for legal operation.

The much beloved amateur license is NOT an "authorization" to do
anything the amateur wants. See the FCC Enforcement letters for
examples.

>I'm sure that the ARRL doesn't require you to be a ham to join, and they
>can find a good attorney who will help, maybe even pro bono (free). It
>won't hurt to ask them.

VOTING membership in the ARRL requires a valid amateur radio
license. "Membership" in the ARRL is little more than a subscription
to QST membership magazine. A few libraries are "members" of the
ARRL in order to put QST on their shelves.

Contacting the ARRL for legal help is essentially a non-starter action
without any valid amateur radio license. All it will generate is a form
letter refusal plus some literature about buying ARRL publications to
study for a license test. :-)

>class license.

Bert, that does NOT "remedy" anything. CB users operating within the regulations of Part 95 have every legal right to continue operating. Achieving an amateur radio license grant is NO "authorization" to interfere with any other radio service or electronic device.

If any utility desires to legally harrass you over alleged interference from your amateur radio equipment, you are still as stuck with legal action to prove your innocence as any CB user. The beloved amateur radio license is not some "shield" against legal threats or legal actions.

You are mixing far more than metaphors in saying "just study a Q&A and visit a VE team."

CL, you have to ignore Dan. He is extremely polarized into olde-tyme
hamme raddio and has yet to leave the early 1900s in technology or
radio law. Think of him deli-style: Ham on rye. [liquid form]

At present, the existing rules on unintentional RF radiators is still that
of Part 15, Title 47 C.F.R. and Citizens Band Radio Service is still
governed by Part 95, Title 47 C.F.R. Any CB user that meets the
regulations of Part 95 has every right to use that CB as he or she
wishes.

Radio amateurs are governed under Part 97, Title 47 C.F.R., and may
NOT do "as they wish" but are required by law to operate within the
technical requirements of Part 97. Their beloved amateur license is
NOT a carte blanche "protection from prosecution" as some imply.
A radio amateur's "authorization" STOPS when they exceed any part
of Part 97.

The NPRM (Notice of Preliminary Rule Making) concerning changes to
Part 15, Title 47 C.F.R., to include Broadband over Power Lines (BPL)
is FCC docket number 04-29. There are already 4 documents filed in
the FCC ECFS (Electronic Comment Filing System) under 04-29.

For some reason as yet not explained to me (inquiry sent electronically
about 4 PM EST this date, 4 Mar 04), the 04-29 docket NPRM was
given as docket 04-37 in the ECFS. 04-37 has 19 documents in it, the
first one being the NPRM (04-29) on BPL, released 12 Feb 04. It is
unusual to find a double ECFS listing on the same docket.

To access all comments, simply go to the FCC website (www.fcc.gov)
and click on either "ECFS" or "hot button topics" buttons. When the
form appears, just enter "04-29" in the top left blank space and press
Enter. The form also appears after "Retrieve ECFS documents" blue

lettering (to the right) on the ECFS main page. All documents are stored and retrieved in PDF; free PDF (Portable Document Format) readers are available from Adobe.

Letters threatening law suits can be considered little more than legal harrassment of the recipient. By themselves they have no real power but are sometimes used to dissuade the recipient, to make them do as the sender desires. Unless the recipient of such legal harrassment is an attorney or has legal services available free, consultation with another attorney involves some cost and time off of normal duties; that is an inducement to have the recipient do as the sender desires.

Those who are obeying the existing law are still legal. Unfortunately, such legality is "challenged" via the threat letters which is, as one put it in here slightly differently, "tossing rights in the dumpster."

>doesn't have a phone number.

Alun, according to the Census Bureau's data as of 2003, there are
100 million cellular telephone subscriptions in the USA. That's about
one for every three citizens. Rather large "spread," I'd say. :-)

If every licensed amateur in the USA had one useable radio, then the
number of amateur radios would be one per about 430 citizens. Not
as big a "spread."

Just get a number of hams in an area with mobile units, have them drive around BPL areas engaging in legal HF contacts. That will knock out BPL first here, then there, then over here, then over there. It will be very difficult to pin it down to any one ham or even prove hams are doing it, yet if they keep knocking users off often enough the users will get tired of BPL and go back to whatever they were using before. Fight fire with fire.

Well think of it this way. It wouldn't be too expensive to design simple
RF devices that radiated in the band of say 14 to 27 MHz now would it? A
continuous wave at say, a couple watts and tossed in various points of
the city. Once the batteries died out they'd go crazy. Then of course
you could retrieve said devices (Very carefully mind you!) and it would
make the engineers go crazy.

But the mobile solution is nice too. Good luck finding the problem when
it's transient.

That's certainly one factor, but here's another: With the liberation of Iraq, embargoes on Iraqi oil are gone and when the damage can be repaired the oil will flow like mad in order to get the money flowing again. This will depress the world price and further divide OPEC.

So the time for the Saudis and others to make money on their oil is now, while the Iraqi infrastructure is still a mess. Can anyone really blame them?

Unitl they come knocking on the doors of amateurs too. Lets face it, there isn't too much difference between the 11m and 10m bands as far as frequencies go. And amateurs usually run lots more power than the average CB'er. And the 10m band isn't the only one that will wreak havoc with BPL. The 20m band has as much a chance of disrupting that Part 15 service and people routinely run 100W or more while rag chewing via voice or pounding out code.

Steve:

So far as I know, it's not illegal to jam an illegal signal. Examples of this are when "cb'ers" jump above 28 Mhz into the 10M band.. Perfectly legal to start calling CQ in CW right over the top of them. Same goes for BPL, if it's interfering. When it does, it's operating illegally (it's under Part 15), so when it does bleep out datacomms, if HAMs transmit through it and cause it to stop transmitting data, so be it. No laws broken there.

So what's the problem?

Were not talking about Cber's transmitting on 10 meters, so
knock yourself out.

Jam that bpl line, and you too can battle them.

No problems.

I agree, but the utility company may have an experimental license to test the
BPL system, making the signals legal even if the service hasn't yet been
established. Something to check.

Since BPL falls under part 15 of the regs, they don't need a license.

I'd bet they don't always wait for the permit, just like cement guys. ;)
They need to find out how bad it is, and they control the power lines,
so experimenting would be fairly easy..just wait and see how many
complaints you get, or how many relay stations don't key up.

Simple scary math. Them boys are up to no good, I'm tellin' ya!

I couldn't find any modems or other devices in that site which involve
Internet access or even WAN netorking via the power utilities'
existing infrastuctures. Or they went over my head. Kindly clarify if
you will.

> 1 Mb/sec seems to be *easily* achievable at HF. It's already
> been done.

Where? By what means?

The way I understand the matter real-world commercial tests of BPL
have demonstrated (so far) that, for all practical purposes, Internet
access via BPL is delivering only around half the speed common DSL
does for a bunch more dollars per month for a connection.

The $29.95/month cost is just another bait & switch scam, the cost
goes up to around $50/month after a few months for half the speed of
DSL for $30-40/month.

There are a number of approaches for using the microwave bands to
provide Internet access under discussion and development. Commonly
referred to as "802 dot something" (take yer pick and buy their
stock).

But those are not BPL which is defined as Internet access over the
elecrtic utilities' power lines which operate in the 2-80 Mhz portion
of the radio spectrum. I've personally tuned the HF spectrum in a BPL
pilot area and no, it's not just "so bad" it's bad enough to kill HF
ham radio anywhere the crap is deployed.

> 1Mb over
> HF seems unlikely.

Probably.

I'm sure the legal counsel for the utilities will use posts like this to
prove to the Congress that renegade ham radio operators are intentionally
interfering with BPL, business and home computer systems. Another nail
in the coffin of ham radio.

Frank:

Experimental licensees still may not interfere with radio comms on bands and/or frequencies for which they are not the primary license holder. HAMs are the primary users of the bands BPL is supposed to be interfering with. Still a non-issue.

The power companies will find out soon enough that their cash cow is poor when they get all the complaints of dropped file transfers, pages not loading, etc... and when they turn up the "power" levels and interfere with HAMs some more to make their customers happy, they'll be fined by the FCC for interference. Riley won't let 'em get away with it, and I certainly won't in my area either.

If it becomes a problem on 20M, or 40M, or 80M, or even 160M, I'm a holder of a license that gives me PRIMARY user privileges on those bands, and I'll transmit right through it to make my contacts, with whatever power levels are necessary to make the contact (up to legal limit), and if the power company complains, that'll just be too damned bad.

Just my two cents.

> is somehow "justified?"

Jim's not the problem...He has not "justified" anything, and if
you read any of his posts for anything OTHER than something you
thought you could lash onto and make a rant out of, you'd notice he's
expressed his disdain for the frequent spankings I've given you for
YOUR conduct.

> Good old Amateur Extra Double Standard!

Good old Lennie not paying attention.

> You waste everyone's time with your puerile behavior.
>
> Upgrade. Become an eight-year-old extra.

Thanks, Lennie, for proving my point.

Thanks also for proving me right...Again...I'd say I "owe you
one", but so far most of what you've said about ANYTHING is so far off
base as to be laughable, or just plain false.

I'll try to find SOMETHING in one of your posts I can
"corroborate" for you...But don't hold your breath.

Steve, K4YZ

>-SSB

They really don't need a license. If your "legal" transmitter
causes them problems, by part 15:

Sec. 15.17 Susceptibility to interference.

(a) Parties responsible for equipment compliance are advised to
consider the proximity and the high power of non-Government licensed
radio stations, such as broadcast, amateur, land mobile, and non-
geostationary mobile satellite feeder link earth stations, and of U.S.
Government radio stations, which could include high-powered radar
systems, when choosing operating frequencies during the design of
their
equipment so as to reduce the susceptibility for receiving harmful
interference. Information on non-Government use of the spectrum can be
obtained by consulting the Table of Frequency Allocations in Sec.
2.106 of this chapter.

It is their responsibity to minimize the problem, moving to a
different frequency if needed. I haven't been able to find records of
a "legal" station being ordered to cease transmiiting and then losing
the case in court. There is one that I know of in the Dallas area, but
it hasn't went to court yet.

Having an Amateur license certainly wouldn't hurt your case.

I'm not so sure. I think that they league is very serious about BPL. I
agree that legal help for a non-ham is unprecedented, but this could be the
exception.

Even worse, the utilities companies are petioning the F.C.C. to
change the part 15 specs to allow more "bleed" than what is presently
allowed by part 15. Its going to be a real problem for every radio
operater swl, cb and amateur.

>
> I say it is. Until you behave yourself, its TAFKARJ!!!

Then I'd say you've pretty well proven that I am right about your
general lack of character.

About what I'd expect from someone who expresses public
admiration for a known liar and antagonist.

> It's about
> > why do YOU address Jim Miccolis with belittling endearments when
> > >>HE<< has never addressed YOU as anything except your proper name?
>
> Tuff. I'm holding TAFKARJ metaphorically hostage until you straighten
> your insane a$$ out. My regrets to Jim. I'll send out for
> Schlottskey's deli.

Still haven't answered the question, which in itself I'd say puts
you in the "coward" category, but the INSISTENCE on being insulting
where no insult was offered puts you solidly in the "scumbag"
category, too.

> Do you often get involved with other people's issues?

Only when I see creepy scumbags acting like bullies towards
people who have treated them with nothing but respect.

You'd be that bully, ergo you'd be that scumbag.

I am sure you family line is proud of you.

> He can. He has. And to a reasonable person, effectively. But
> TAFKARJ remains in another world. A Ham in a Bubble.

So far everything he's said, other than that that he clearly
states as opinion, is true.

You and Lennie the Liar do not have that reputation.

> > Are YOU that weak minded and foolish?
>
> Don't know.

I do....

> On a scale of 1 to 10, with 10 being the most weak-minded and foolish,
> how high would you rate me?

Ummmm.... a solid 8.5. You ahve the potential to be redeemed,
but I doubt it. You occassionally manage to express a vaild opinion
without being insulting or dememaning, but your inability to
substantiate your claims leaves you wanting pretty badly.

> > He did the same thing with me when he launched into allegations
> > of being a "jack booted thug", "Nazi", "elitist", "Dill Sergeant", etc
> > etc etc, when I had not so addressed him. He is treated and addressed
> > in the same tone and with the same viciousness as he unleashed.
>

> just a wee little bit over the top. Ask ANYone!

Perhaps I am...But I refuse to be talked down to, pushed, or
otherwise be bullied by cowards and creeps like you and Lennie.

Sorry if that hurts your feelings. Perhaps asking yourself how
you came to this juncture would be warranted?

> > Is that how you feel? Do >>YOU<< need to belittle Jim in order
> > to effectively express yourself when discussing things with/about him?
>
> Do you need to belittle me in order to express yourself?

Nope. You belittle yourself just fine. But since you deem it
necessary to address people the way you do, I just assume that this is
the manner in which you find it most effective to communicate.

> Rhetorical question. I already know the answer.

No you don't. You ASSUME that you know an answer.

> And, no, I don't need to belittle TAFKARJ. Have I done so?

THAT was a rhetorical question, Brain.

> > Please do not humiliate yourself by trying to misdirect this
> > question by asking >>ME<< about how I address Lennie...I've already
> > answered that.
>
> See above. Why do you need to try to belittle >>ME<<?

Because it seems to be the form of communication that you
understand.

> > Stay focused...you were asked a direct, specific question.
>
> Which was?

Which was obviously not important enough for you to answer like a
man.

> > You CAN answer direct, specific questions, can't you?
>
> If I can recall them.

Obviously you ARE Gene Pool Deficient...

Cut and snip to...

> > PS: I will assume any answer to the question that attempts to
> > redirect or obfuscate the response to be "I am unwilling to directly
> > answer the question as I know the truth to be other than what I
> > stated". Simple enough?
>
> See above. Questions answered. Now what?

No, they weren't...but I am sure that you think that you danced
your way around the point.

THE POINT is that Brian Burke is not a person of reputable
character. Not that we'd expect anything less from a person who
publically expresses admiration for a known pathological liar and
antagonist.

Thanks, Brain...You DO make this easy...You have now admitted to
publically lying...not that "we" didn't already know that.

> Stebe, I have no douche bag friends, unless you believe yourself to be
> my friend.

Sure you do.

You have publically proclaimed your admiration for Lennie Anderson
on several occassions.

Lennie has been documented in countless lies and acts of
antagonism and misrepresentation.

That, in my book, makes Lennie a douchebag.

> So, has Roll not claimed that Ham Radio always saves the day?

He has claimed it has "saved the day"...

I have never seen him say "always".

You or Sir Putzalot will have to provide me a cite of a post
wherein he did.

FACTS have proven that Amateur Radio HAS "saved the day" on
occassions too numerous to count.

And your point is...?

I'm not really sure what you're getting at, but my point was that it is reasonable to assume that everyone has a TV and a phone, for example, but we're not yet at that point with cellphones. Close, but not there yet. Of course, I would say that, as I don't have one.

The level of use of ham radio is not particularly relevant to the discussion, except in that there are clearly enough of us to help out in an emergency.

>
> > In the long run, those currently
> > cheap off shore labor markets will self adjust upwards.
>
> Maybe. And if so, might they not find themselves in the same boat?

It's already happened.

Among others big-name Jap manufacturers like Sony, Honda, Toshiba,
etc. have been shoveling jobs into southeast Asia at a huge rate for
years and now they're moving into China at an astonishing rate too.
The Japanese unemployment rates are much worse than ours as a result.
It's even more of a kick in the butt for them because it's happening
in a society in which full employement has historically been a major
component of their culture.

Fifteen years ago moving manufacturing to Singapore was the hot
ticket. So everybody did. The singaporean economy skyrocketed, their
per capita wealth became the global model. Now the hot ticket is
getting the hell outta Singapore because manufacturing there costs too
much.

>
> I don't know of any country that grew prosperous on a service economy
> alone.

That's because there is no such thing as a "service economy", the term
and the concept are oxymorons. Economics 101: There are only three
ways a nation can generate wealth: (1) Dig valuable minerals out of
it's ground (2) Grow, catch or raise crops and critters (3) Enhance
the value of the outputs from (1) and (2) via manufacturing. Anything
else is just passing the same bucks around in circles until they peter
out. As exemplified by our balance of trade deficit.

David, the reading of it takes no time at all since there is so little
content. It's the contemplation, wonderment, and disappointment
afterwards that you are supposed to be some kind of hotshot in the
amateur radio world, yet none of it comes through in the way you
express yourself here. Simply amazing.

All you would need is a couple of cases and I'd bet the ARRL would get into the action with some rather deep pockets.

First, local courts have no jurisdiction. Go to the feds. The FCC isn't going to be happy, but they'll have to side with the amateur station. Meanwhile, a counter suit could be filed. Now, drop the suit or who might loose what? Hey, you might make more money than the woman who spilled hot coffee on herself and sued the fast food chain LOL.

Besides that, not all hams are poor. Of course, it will help immensly if the ham has great internet service whilest he/she is operating (courtesy of DSL or cable) :))

Just a thought..... Electrical interference from power lines <not
considering BPL> is usually able to be tracked down with out too much
equipment. So, my question is - at the points of the "leaks" of the
electrical interference - it seems to me, would be the same locations BPL
would be "most" noticeable. Any other opinions? CL.

An Amateur license could and maybe would help, but again....IF he is operating a Part 95 station..... such that they have no faults against him, then they have little choice than to abide by their own Rules and Regulations. If they go against that which "they" have set forth, that wouldn't hold much water either. CL

Amateur Radio Newsline(tm) Report 1386 ï¿½ March 5, 2004

The following is an advisory. Ladies and gentlemen, with a list of thank-you's for supporting us, heres our Treasurer and Support Fund Administrator Andy Jarema, N6TCQ:

--

Still playing "catch-up" for our supporters, in the month of June last year we heard from:

Monthly contributor Benton Bonney, W4PE of Orlando; Joseph Bartzi, Jr., KC8DKF of Columbus, OH; mnthly contributor Frank Hemko of Harrods Creek KY; te Hualapai (Walla-pie) ARC of Kingman, AZ; monthly contributor William Walters, WA2IBM, of San Jose; monthly contributor Scott Hensley of the Area Communications Team, also in San Jose and an "Aloha" from Corky Kirk, Jr., W6ORS of Hilo, HI.

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast. I'm Andy Jarema, N6TCQ.

--

Thank you Andy. And now, Amateur Radio Newsline report number 1386 with a release date of Friday, March 5th, 2004 follows in 5-4-3-2-1.

The following is a Q-S-T.

Help from down-under in the fight to save Amsat Oscar 40 and lots more on the fight to stop B-P-L. Find out the details on Amateur Radio Newsline report number 1386 coming your way right now.

HAM RADIO IN SPACE: HELP FROM DOWN-UNDER IN REVIVING AO-40

The AMSAT Oscar 40 ham radio satellite is still missing in action, but more international help in bringing it back to life is coming almost every day. The latest is from down-under as Brett Dawson, VK2CBD and the team of Australia's Parkes Observatory lend their support to AMSAT Germany in the recovery effort. Q-News Trevor

Teague, VK4BAT, reports:

A 4 MHz wide spectrum with centre frequency of 1097 MHz was scanned with high level technique in order to find the LO frequency of the AO-40 L1 receiver. The fact that nothing was heard of the L1 receiver's LO does not lead to the conclusion that AO-40 is completely dead. The receivers of Parkes are not really fitted for frequencies below 1.25 GHz, and naturally one does not know how good the L1 receiver's LO is shielded or how much of the signal would go through the antenna to the outside world.

As previously reported, the main battery pack that powers AO 40 is believed to have short circuited keeping the auxiliary battery from powering the bird. As this newscast goes to air the rescue effort continuing. (Q-News)

ENFORCEMENT: FCC SEEKING INFORMATION ON ALLEGED FELON HAMS

Back here in the United States, our FCC wants to know if several people on a list it has are felons convicted of an array of very serious crimes. The agency's Daryl Duckworth, N-N-Zero-W, explains:

--

Duckworth: Seven inquiry letters were sent to individuals thought to be licensees who are incarcerated on felony convictions listed on sex offender registration lists or (who) recently served prison sentences for felony convictions. In these cases, the names match our license records and preliminary information is that the subject is the same person listed in our database.

These inquiries seek first to establish whether that is the case, and, second, to determine what affect the offense has on the qualifications to retain a Commission license.

This has been Daryl Duckworth, NN0W, reporting.

--

The FCC did not provide names but it did give conviction information and the locations and offenses. The list includes hams believed to have been convicted of offenses ranging from sexual abuse to child molestation and even murder. (FCC, RAIN)

RADIO LAW: JUDGE ORDERS TECHNICAL TESTIMONY IN ALLEGED JAMMING CASE

A Wisconsin federal judge has refused to close the courtroom for testimony by employees of Motorola during the trial of a defendant who allegedly tried to jam police and fire communications. on several occasions last year. In denying Motorola's motion, Judge John Shabaz said on February 27th that the right of Rajib Mitra to a fair trial outweighs Motorola's right to protect its trade secrets.

According to the Madison Capital Times, attorneys for Motorola had argued national and local security concerns as reasons that it did not want public disclosure on how its radio equipment was allegedly jammed by Mitra. The government planed to call five Motorola employees to explain how its Smartnet II radio equipment can be disrupted. Motorola claimed this not only exposed its trade secrets but also placed at risk the lives of law enforcement officers that depend on the proper functioning of their radio communications systems.

But assistant U.S. Attorney Tim O'Shea opposed Motorola's motion, as did Mitra's attorney. Christopher Van Wagner argued that removing the public during his client's testimony would prejudice the defendant. Judge Shabaz agreed with the prosecution and defense. He overruled the Motorola request and ordered the employees to testify noting that no one in the public is coming to his court to find the formula to jam radio frequencies. He noted that this kind of technical testimony can be removed from trial transcripts when they are produced.

Mitra's trial was to began on Monday, March 1st. He faces two charges of using a computer to interfere with police communications. If convicted on both counts he faces up to 20 years in prison. (Capital Times)

RESCUE RADIO: EMERGENCY COMM GENERATOR STOLEN

I'm Bill Pasternak, WA6ITF, with a late breaking story. Dateline San Antonio, Texas where, last Saturday night, February 29th, the San Antonio Radio Club had one of its trailer and generator systems stolen.

Paul Guido, N5IUT, reports over the Public Relations remailer that it was a 12.5 Kilowatt Onan unit. The club's biggest and best generator.

A police report has been filed that includes some very good pictures of the trailer with the generator on it. If you have any information on its where-abouts, please contact Paul by e-mail to Pguido2003a@broadwaybank.com or call the San Antonio police.

The San Antonio Radio Club has been a Bexar County, Texas, emergency communication resource since way back in 1919. (N5IUT)

THE BPL FIGHT: THE 11 METER CB ANGLE

Over the past several months we have been hearing about the potential interference to Amateur Radio that's expected if the FCC proceeds with the rollout of Broadband over Powerline Internet access. But ham radio is not the only service in the 2 through 80 MHz spectrum where B-P-L will operate. Shortwave broadcasters are concerned that their audiences will disappear if they cannot be heard over B-P-L generated noise. Also, a number of emergency communications networks have told the FCC that their vital communications will negatively impacted as well.

The one service that nobody has talked about is 11 meter Class D CB radio. An unlicensed service at 27 MHz with millions of radios crammed into 40 overcrowded channels with many operators running far more power than legally allowed. This week, Amateur Radio Newsline's Mark Abramowicz, NT3V, looks at CB, B-P-L and the collision between the two that may not be to far away.

--

If those who want to bring us Broadband Over Powerline thought amateur radio operators were going to be a nuisance to their plans, they may have an even bigger headache on the horizon. Citizens Band radio operators could prove to be the biggest threat to B-P-L.

The FCC defines CB as a private radio service that doesn't require users to have a license. It hasn't for years. The FCC pretty much gave up regulating the spectrum. It asks users to enjoy their radios but to stay within the five-watt power limit of most of the radios.

But since the FCC gave up trying to keep track of those operating on 27 Mhz, problems have mushroomed. A class of CB operator has emerged who likes to use high-power amplifiers to talk with people several states away.

How powerful? If you check out some of the CB websites, you'll find amplifiers being sold that push the envelope well beyond the legal limit - say 500 watts, 1,000 watts, even 5,000 watts and higher.

Many contemporary electronic appliances, because of poor RF shielding, are susceptible to interference caused by overmodulated CB signals.

The FCC could find itself in a real quandry if the B-P-L industry demands help in going after those who push the limit and disrupt

their systems. Imagine the complaints.

Because the FCC can't go to a database to help it find abusers or offenders, it's going to be a difficult if not impossible - task to track these illegal operators.

Will the industry end up funding the FCC's enforcement effort? That would be unprecedented.

Let's be clear: Not all CB operators are outlaws.

Many use their 11 meter radios for personal communications on trips, on hikes, on fishing expeditions. And, yes, the truckers are still big users of the spectrum.

But if you search the worldwide web, you will find CB sites with postings from folks who boast of their radio exploits and their amplifiers and contests.

The websites, of course, take no responsibility for the information or material posted in forums or message boards. They describe them as strictly for entertainment or educational purposes.

Some education the B-P-L industry is sure to get; perhaps a crash or will that be clash course in CB radio.

For now, we'll have to watch and wait.

CBers say they're watching, too. And some of them are vowing no one will stop them from operating as they please.

Stay tuned. For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

To get an idea as to the power that some of the highly illegal competition grade C-B stations run, take your web browser to www.bigradios.com and follow the numerous links from there. (ARNewsline(tm))

**

THE BPL FIGHT: CINCINNATI WATCH OUT

Meantime, Cincinnati Ohio may be among the first to have Broadband over Powerlines across the entire area. This, as a division of Cinergy Corporation announces plans to offer high-speed Internet service over its power lines.

According a March 2nd release, Cinergy Broadband is pairing with the Maryland based Current Communications Group to offer the service in parts of Cincinnati this year. Plans also call for an expansion into Kentucky and Indiana as the regional system grows.

Cinergy says that it hopes to initially market the service to 55,000 of its 1.5 million customers. A second venture will bring the technology to smaller municipal and cooperatively owned power companies, covering 24 million customers across the United States. The companies are committing more than $70 million to the effort. (ZD Net via Media Network)

**

ENFORCEMENT: CONGRESSIONAL SUBCOMMITTEE RECOMMENDS HIGHER FINES FOR INDECENCY

A congressional subcommittee has acted to substantially increase the fines assessed broadcasters who break indecency rules. Some legislators also say that repeat offenders should lose their licenses.

FCC officials have maintained for years that the current maximum fine of $27,500 is too small to serve as a deterrent for large broadcasters who view the fines as a cost of doing business. Now, under a bill recently passed by the House Internet and Telecommunications subcommittee, monetary forfeitures issued by the FCC would be increased by a factor of ten to $275,000 per violation. The cap on the fines would go to a maximum of $3 million.

There is yet another possibility being floated among legislators and one that could come up when and if the bill hits the House floor. That would be to hold performers and others appearing in the electronic media directly responsible for their own words, much the same way as is done in other radio services including ham radio.

But one law maker has cautioned to enlarge the scope of the proposed legislation to far. Representative Fred Upton cautioned that lawmakers should be careful not to expand the bill to the point where it might run afoul of free-speech rights guaranteed by the Constitution. If that happens, Upton says that it could very well buckle under its own weight. (Published news reports)

**

RADIO LAW: FCC SAYS IT TIME FOR LOW POWER BROADCAST RADIO

The FCC says that Congress should lift the restrictions it has placed on the introduction of low power FM broadcast stations. Amateur Radio Newsline's Bruce Tennant, K6PZW, is here with the rest of the story:

--

In a February 20th statement, the FCC said that its inquiry shows that low power FM stations serving highly specific audiences in small areas do not interfere with the operations of large broadcasters. Also, that they will not keep audiences from hearing the higher power commercial stations as the industry claims.

When the FCC first suggested creating the low power or community radio option. commercial broadcasters and public radio stations complained. The argued that low power stations would interfere with reception of their signals Congress responded by setting what amounted to an R-F no-man's land between the low power stations and existing broadcasters. This severely limited the number of tiny stations that the Commission could license.

Lawmakers also told the FCC to study the potential for interference. The agency spent several years doing just that. It has now concluded that stations running between 10 and 100 watts pose little risk to commercial stations whose power levels can be upward of 100,000 watts effective radiated.

Currently, there are about 300 low powered F-M stations on the air. Most are licensed to churches, school districts, youth organizations, highway departments, environmentalists and the like. By comparison, the nation's largest commercial broadcast radio chain, Clear Channel Communications owns 1,200 stations so far.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

A spokesman for the National Association of Broadcasters termed the FCC report as flawed. (FCC)

**

ON THE AIR: WYOMING STATION DX TEST MARCH 14

Meantime, a full power radio station is in the news and its a good news for hams and S-W-L's who like listening for rare ones on the A-M band. On Sunday, March 14th, radio station KEVA, 1240 kilohertz in Evanston, Wyoming will conduct a D-X test to find out how far its signal can be heard.

According to Lynn Holman reporting over the Broadcast Employees remailer, the test will take place from 12:00 - 1 a.m. Mountain Standard Time and will consist of numerous Morse code I-D's emanating from a C-D created by Doug Smith, W9WI.

For a conformation card please send your reception reports with return postage to Michael Richard, KEVA-AM, P.O. Box 190, Evanston, Wyoming. The zipcode is 82931. (B.E.A.N.)

**

CONFERENCES: EASTERN VHF-UHF IN CT. IN APRIL

Turning to ham radio meetings of note, the 30th annual Eastern VHF UHF Conference will take place next month, April 16th through the 18th at the Radisson Hotel in Enfield Connecticut. Among the program to be presented will be a special update on the "Status of

VHF UHF Contesting & Awards Programs" will be Dan Henderson, N1ND of the ARRL. Also on hand will be Gerry Rodski, K3MKZ of SSB Electronic USA to manage the Preamp Noise Figure Measurement workshop and Chris Fagas, WB2VVV to oversee the antenna gain measurement range.

The conference is sponsored by the Eastern VHF UHF Society and the North East Weak Signal Groups. More information is available from Conference Chairman and Proceedings Editor Bruce Wood, N2LIV. E-mail him bdwood@erols.com or visit http://newsvhf.com on the World-Wide-Web. (VHF Reflector)

**

CONFRENCES: SVHFS IN GEORGIA IN APRIL

And the 8th Annual Southeastern VHF Society Conference takes place in Marietta, Georgia on April 23 and 24th. Marietta is not far from, Atlanta and this years program highlights include sessions on pre-amp noise figure and gain measurement, antenna gain measurements, a back scratcher antenna competition and judging for the Mini-Circuits Annual Award for Design Achievement. Also expect a flea market, manufacturer exhibits, the annual auction, and card checking for VUCC. For more information on this one please take your web browser to www.svhfs.org (VHF Reflector)

CHANGING OF THE GUARD: BAND LEADER ALVINO REY, W6UK - S.K.

Ham radio's changing of the guard continues. This with the sad news that Alvino Rey, W-6-U-K, has passed away.

Ray was 95 when he became a Silent Key from pneumonia in Sandy, Utah on Tuesday, February 24th. Best known as a swing-band leader of the '30s and '40s he was also an inventor and tinkerer who pioneered development of the pedal steel guitar. This instrument, and his ability to make it sound like it was talking became his musical trademark.

Born Alvin McBurney, in California he grew up in Cleveland Ohio. After beginning his music career in New York he changed his name to Rey in 1929 to capitalize on the then popular Latin music craze.

Rey and his orchestra gained national fame with the 1942 hit, "Deep in the Heart of Texas." Nearly 25 years later, Rey was again in the national spotlight when he was featured for several seasons on ABC Television's "The King Family Show."

Ham radio wise, Ray loved to operate all modes, and, according to posts on the V-H-F reflector, was particularly fond of 6 meters. He was also active on all of the the high frequency bands over his many years in the hobby. (K6LAE, published news reports)

WORLDBEAT - USA: BIG ANTI-PIRACY WIN

A federal judge in San Francisco has ruled that a software program that copies Digital Video Discs infringes on the copyrights of Hollywood studios. Judge Susan Illston ruled that software made by 321 Studios of Chesterfield, Missouri violates the 1998 Digital Millennium Copyright Act. This law prohibits the circumvention of anti-piracy measures such as the Content Scramble System protecting movies on DVDs. Judge Illston ordered the company to stop making or distributing such software within seven days of her February 20th order. (News reports)

**

WORLDBEAT - BELGIUM: HACKER GAL ARRESTED

Meantime, a Belgian computer hacker who has made an international name for herself as a woman in a male-dominated activity is facing criminal charges. Belgian police have arrested the 19-year-old technology student, confiscated her five computers and shut down her Web site.

A Belgian newspaper says that the woman, identified only by her nickname, Gigabyte was charged with computer data sabotage. Police tell the paper she was preparing to publish new viruses on her Website when she was taken into custody. If convicted, Gigabyte faces up to three years in prison and 127-thousand dollars in fines. (Computing)

**

WORLDBEAT - UK: IOTA IN OCTOBER

And while its a long ways off, the dates of the Radio Society of Great Britain's International High Frequency and Islands on the Air Convention has just been announced. This year, the gathering will take place the weekend of Friday October 22nd to Sunday the 24th. Further announcements as to venue and the program will follow later on www.rsgb.org and the GB2RS news service from the U-K. (RSGB)

**

NEW HAM PRODUCTS: THE JWM 1152 PHASE LOCKED OSCILLATOR

Looking at products of interest to ham radio experimenters, word that JWM Engineering Group has announced availability of a new phase locked oscillator. One designed to improve frequency control to microwave receivers and transmitters using crystal oscillator local oscillator chains.

According to Jerry Mulchin, N7EME, President of the JWM Engineering Group, the Model 1152 eliminates the frequency uncertainty of most microwave transverter systems. Mulchin adds that Precise frequency control and stability eliminates at least one variable in establishing successful and enjoyable microwave communications. More information is on the web at http://jwmeng.com. (JWM Engineering Group)

**

CONTESTS: WB6ACU AND K9EID ON FROM W1AW

On the radiosport page, the ARRL phone contest on March 6th and 7th will have had some well known hams operating from the League's W1AW flagship station this year. According to a note from Bob Heil, K9EID, he and famed rock guitarist Joe Walsh, WB6ACU of the Eagles will be on the air from League headquarters during contest. A special picture QSL will be sent to those who work Joe or Bob. QSL to their respective call directory addresses. (K9EID)

**

DX

In DX, PA5M has been active as 9U5M from Burundi since the 17th of February and will stay in the country until the 17th of March. He operates in his spare time, typically after 1600 UTC, on 10 to 40 meters CW and SSB.

And W7EJ is in Morocco until the end of March. He plans to be active as CN2R in the CQ 160-Meter SSB, ARRL DX SSB and CQ WPX SSB contests.

Also, DJ4SO is active portable V-51 from Namibia through the 15th. He plans to operate on 160 to 6 meters mainly CW, RTTY and PSK 31 with some SSB.

Lastly, ZS6Y reports he is active with the special callsign ZS10RSA until mid-May. This, to celebrate 10 years of democracy in that nation. For all of these operations, QSL as directed on the air.

(This weeks DX news courtesy of GB2RS)

THAT FINAL ITEM: THE ORIGIN OF ELECTRONIC SPAM

And finally this week, a brief lesson on something we dread every time we check our e-mail. You know what it is. Unwanted junk e-mail

that people have come to call Spam. Ever wonder why? Here's Bill Pasternak, WA6ITF, with some details that probably very few people know:

--

We all know that Spam is the trade name of a canned meat product. At least I suspect that most of you do. But have you ever wondered where the phrase "spam" in relation to unsolicited junk e-mail came from. Well, blame it on the computer nerds who were fans of one of the worlds greatest comedy ensembles.

It seems that the term began being applied to junk electronic mail in the early 1990's by computer geeks. It was based on a 1970 Monty Python skit in which an exasperated restaurant customer is urged to order the meat until she screams: ''Stop it already. I don't want any Spam!''

And that was it. And now you do know the rest of the story.

For the Amateur Radio Newsline. I'm Bill Pasternak, WA6ITF, in the City of Angels.

--

To which Ill add the rhetorical question: How many of us open our e-mail boxes each day and want yell the same thing? (Tnx to Q-News, CGC, others who sent this item along.)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Yep, sadly it's becoming a reality.

Personally, I'm looking forward to the day when I program my electronic keyer into a CQ loop, fire up the amp and leave on a vacation. Of course, the next logical step is the FCC protecting the BPL by placing amateur radio in part 15.

Steve, in your own eyes-rolled-back kind of way, I'm sure you really
believe what you say.

But I don't.

I think you're nuts.

OK, Alun, lets look at it another way.

We agree that cellular phones can be useful in an emergency.

We agree that not everyone has a cellular phone, maybe only 1/3 of the
US population.

We know that there are very, very, very few amateur radio operators
per capita in the US population.

We can conclude that most people have better access to cellular phones
in an emergency than they have access to amateur radio.

I am sure that he'd be the center of attention at a CB Jamboree, "enlightening" those impressionable souls with his "wisdom" on such antics...Until, of course, someone had the temerity to ask him to provide some evidence of his exploits.

And of course he could throw in some well timed colloquialisms like "flat side", "swing" and "dead key" and they'd be putty in his (cold and clammy) hands.

Or maybe not...

Correct! (shudder) We cannot make money by sitting in a closet and
selling our hats to each other. While the person who is a "Hamburger

Manufacturer" sells his/her wares to the buying public for minimum wage can do that, There has to be people that are doing something else that makes more. They have to buy from the Hamburger manufacturer. While we can expound on trickle down and all the other theories out there, if everyone is in a low paying service job, there won't be much discretionary cash floating around. therefore there won't be as much sold, and there won't be a healthy economy.

A healthy economy in the model that we in the US are used to requires a prosperous and large middle class. Somehow that has gone missing from some folks.

In article <104f7g7rtkdv7de@corp.supernews.com>, Glenn
<kg5uc1NOSPAM@charter.net> writes:

>While I remember that the tests for Novice and General were of the
>multiple guess kind in the '60s (albeit at an FCC Field Office), I could
>swear that I remember that drawn circuit diagrams were required at least
>for the Extra written exam, if not the Advanced. This from the study
>guides that I had for the tests.

I have the ARRL License Manuals with copyright dates for 1947, 1951, 1953, 1962, and 1971. They detail the exact process of getting a license in those times, both by mail and at FCC exam points.

Some facts:

- The Novice was always multiple-choice only. All of the manuals describe the Novice written test as "about 20 questions"

- The 1953 and earlier manuals describe the higher-class written tests as requiring the drawing of a few diagrams. The 1962 manual says that all exams are multiple choice.

- The 1953 and earlier manuals say that some questions are neither multiple choice nor diagrams, but require the examinee to solve a problem and show the calculations used.

- The 1962 manual says that the written exams are all multiple choice.

QST for July 1960, page 54. "FCC Written Exam Procedure Changing" . This article describes the new FCC answer sheet that will go into use "in a few months". It shows the new answer sheet and describes how the "draw a diagram" questions will be replaced by questions about a diagram, such as "what should be done to neutralize this circuit"

Three noteworthy points:

1) the old multiple choice exams offered 5 choices, not the current 4, making a correct answer by guessing slightly less likely.

2) the article says that the number of diagram questions will be increased when the new exam method is implemented. And so it was, at least for General - compare the following tallies of required diagrams in the LMs:

1953 LM: General has 8 diagrams in its study guide, all schematics, Extra has 28 schematic and 3 block diagrams in its study guide.

1962 LM: General has 50 diagrams in its study guide, all schematics, Extra has 17 schematic and 3 block diagrams in its study guide.

One of the reasons for the higher number of diagrams in the '62 LM is the inclusion of multiple diagrams in one question, such as 8 filter diagrams being

the answer to a single question.

3) No exact date is given for the transition - the article says "in a few months", and it's clear that FCC would use up the old exams before starting the

new ones.

While the old General exams were probably quickly used up, there were very few getting Extras back then, and the supply of Extra exams at some FCC offices may have lasted quite a while.

Reason for the change: To speed up and simplify marking of the exams! By making them all multiple choice, the person marking the test did not have to understand the material at all, just the procedure.

In both 1953 and 1962, the Advanced test was not given, and hams had to upgrade from General to Extra in a single step. However, there were no additional operating privileges granted with an Extra, and only about 2% of US hams in 1962 were Extras. The Advanced was reopened to new issues in 1967.

Well, if I had to make a choice, I would rather the person taking the
exam know the material! 8^)

I have to say that I don't find as much difference between the older
tests and the newer tests as I thought there would be. I was kind of
under the impression (but skeptical) that the older tests were a
regular "hazing" compared to the easy tests we take today.

Thanks much for your research, Jim!

What is "painfully obvious" is your glaring lack of real-world
experience in Amateur Radio matters...This compunded by your equally
woeful lack of experience in emergency communications in ANY radio
service.

> Mobile installations have only to start a vehicle to restore electric
> power to radios installed therein. However, if a fire or mudslide

More ignorance.

My ICOM IC-O2AT was purchased in 1984, and until a few years ago
remained in continual service.

I carried to to 29Palms on instances too numeous to recall. It
was with me on several winter weather training exercises conducted by
the US Army's 10th Mountain at Fort Drum, NY in the middle of winter.
It was also my "close companion" while working EMS in Victorville and
Ridgecrest CA in the late 80's.

It was also on at least a dozen SAR missions with Civil Air
Patrol while stationed in PA, and once dropped by me in a creek. I
dried it out, changed the battery, and that was that.

I've also carried my Yaesu FT757GXII from coast-to-coast, used it
as a "base station", mobile and portable on numerous CAP activities.
I'd still be using it for CAP had CAP not required compliance with
NTIA standards.

Uh huh. "extreme emergencies" like getting nuked.

With the exception of REACT, there are NO plans for "press(ing)
into use" of those unlicensed/untrained "facilities".

On the otherhand, ARES and REACT >>ARE<< included in and
routinely used by almost every state EM plan.

> Few amateur radio licensees are aware of anything but the last.

An absolute falsehood.

> The general thinking is that all communications was set in the

> "service" as if all they do IS emergency service ALL the time.

What's fantsy here is your assertions, Lennie. You've not
provided one bit of valid rhetoric, nor do your assertions reflect
facts otherwise documented in countless media sources.

In otherwords, you are, again, lying.

> >But just as an electric company can usually buy power from another company

> radio services operating 24/7.

Given a true "disaster", those "facilities" will be (and have
been proven to be) hard pressed to serve the agencies they are
embedded with.

Amateur Radio, on the otherhand, does not exist to serve it's own
needs...it exists to support others.

This it does superbly. Unless you care to "argue" or "dispute"
the claims made by the Federal Emergency Management Agency, the Red
Cross, the US Department of State, the Salvation Army, etc etc etc.

> The Greater Los Angeles Emergency Communications Center got its
> "baptism of fire" (so to speak) during the Northridge Earthquake in

> radio services, not the "let's pretend" of some hobby activities. The
> Center has had several emergency incidents since the quake of a
> decade ago and handled all of them.

Yes, it did. And Amateur Radio supported many of those incidents
within the scope of pre-planned and trained for contingencies. Again,
these are facts documented in numerous, verifyable third-party media.

> In a TRUE emergency, ANYTHING can be used for communications,

"...boastful claims which are unproven"...?!?!

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHA
! ! ! ! ! ! !!

WHAT A FREAKIN IDIOT!

Sheeesh!

> There should be nothing wrong with being just a hobby. Hobbies are
> excellent for recreation.

Yes, they are...And Amateur Radio is, for a great many people,
jsut that.

But it gives me no small amount of satisfaction to know that
since it's >>NOT<< "just a hobby" to a great many that you are getting
your one-size-too-small Fruit-of-the-Looms in a seriously
blood-constricting knot!

YOUR problem is that you have, once again, jumped in without
checking to see which way the tide was flowing and have found yourself
being dragged off-shore.

WHAT an IDIOT.

Possibly true, so long as the cell towers are still standing.

Nope. Not even close. Please read my post as validation as to
why.

Lennie makes yet again more assinine assertions that are
disproven by evidence from thir party sources.

> With few exceptions, all of the hams that I know are ragchewers,

Why not, indeed, and that's fine. Most emergency preparedness
plans DON'T need legions of persons to carry out the plan...Just a few
dedicated persons willing to apply themselves to the task at hand.
Most IC's DON'T want any more people there than what's necessary since
they become a burden on already limited resources.

Again, it has been PROVEN that ARES, REACT, RACES, etc, have
filled these niches well.

> Of course, in an emergency situation, any of us would be willing to

> not, how much could you be counted on to be there if needed throughout
> the entire emergency?

The "training" needed to effectively carry out most emergency
plans (for Amateur Radio's role, that is...) does not require military
precision nor 24/7 commitment. There's more than enough time to
ragchew, DX, "tinker", etc, in between events.

In one way he does have a point. What I am alluding to is that prcisely
because it is a hobby we all have thousands of bucks worth of radios lying
around, and we can use them without wires and cell phone towers.

No you don't. CBers have no rights at all. You come under a 'unlicensed class'. That means you must accept any and all interference.

If you are so much in the right, then tell me why the LOCAL COPS can come in and shut you down?

Can't do that with the hams....we have real licenses. And are protected by Federal Laws.

You, on the other hand, are nothing but bandits trashing up the spectrum.

Again////if you don't like it....get over it...Facts are Facts.

Data point: The General written I took for Technician in 1958 included 5
"draw a diagram of X" questions. The General study guide from ARRL at the
time included 14 diagrams that might an applicant might be asked to draw.
I memorized all 14 diagarms.

>tests and the newer tests as I thought there would be. I was kind of
>under the impression (but skeptical) that the older tests were a
>regular "hazing" compared to the easy tests we take today.

There are three main differences:

1) The old tests covered a few subjects in depth while the new ones cover a lot
of subjects in much less detail.

2) A person taking the old tests did not know exactly what would be on the
tests, just general areas of knowledge. A person taking today's tests has
access to the exact questions and answers that will be on the test. For
example, we knew there would be questions on Ohm's Law in DC circuits, but we
didn't know how many or what they would look like.

3) The old tests were given at relatively few locations and at times that were
quite inconvenient for most people. The new tests are much more accessible.

End result is that we tended to "overlearn" .

Speaking as a "HAM" - that is why THEY don't like US either! The "holier than thou" attitude that some of our group takes. They have as much right to their band as we do ours. Who died and made you God? CL

YOU ARE SO WRONG! CBers are protected under Part 95 as we are Part 97. Cops don't just rush in and shut them down. Not anywhere that I'm aware of. Maybe in your dreams. Climb off your high horse before someone knocks you off some day. Tomorrow wouldn't be soon enough from the sounds of it. And, I AM A HAM! I do NOT do CB anymore. Haven't since like 10 years ago. But again, THEY have as much right as we do. YOU need to get a life. CL

> believe what you say.

Of course I do, Brain. Why would a rational person say something
he DIDN'T believe?

> But I don't.

Of course you don't, Brain. Probably due tot he fact that it's
your failure to understand why YOUR behaviour is the one in question
here...

YOU claim to have operated as "DX" from an area of the world in
which you obviously had no permission to operate from. I say
"obviously" since you cannot produce a single bit of evidence that you
DID have permission.

When asked to provide some documentary evidence of this
operation, you cannot provide a single QSL card, a single callsign of
somone who can verify they "worked" you, etc.

You then follow up THAT act by publically expressing admiration
and claiming as your "mentor" a person who ahs been clearly and
repeatedly documented as intentionally untruthful and openly spiteful
of the very radio service of which you are a licensee.

Several folks here have expressed disdain of my poking at you and
the Putzy one...Not because you don't deserve it, but because they
believe if you are "left alone", you'll go away.

I did that for a while and you didn't...Neither did your lying friend.

I for one believe when you try to placate bullies and liars, you only serve to embolden them.

Just as it is your right to lie and misrepresent, it's my right to challenge and expose your lies and misrepresentations. You and Lennie certainly give me plenty of opportunites to address them.

> I think you're nuts.

If thinking that makes you feel warm and fuzzy and let's you sleep at night, Brain, you go right on ahead and think it. Consider it yours.

Steve, K4YZ

They do in Spokane. A few years ago the police chief himself (Terry Mangan),
while off-duty, shoved a shotgun the the faces of some CBers just because they
were parked in front of his house.

YOU ARE SO WRONG! CBers are protected under Part 95 as we are Part 97. Cops don't just rush in and shut them down. Not anywhere that I'm aware of. Maybe in your dreams. Climb off your high horse before someone knocks you off some day. Tomorrow wouldn't be soon enough from the sounds of it. And, I AM A HAM! I do NOT do CB anymore. Haven't since like 10 years ago. But again, THEY have as much right as we do. YOU need to get a life. CL

Yeah, right. Next time you hear a CB type running high power out of band, tell me again that they are "protected."
They do NOT have as many "rights" as we...insofar as band spectrum is concerned.
Take your own advice...get a life.
10-4, Good Buddy?

There will be so much capital investment by companies in BPL that the courts won't dare to overturn the decision!!!! The FCC will cave to the $$$ interest, if they have not already done so.

The answer may be to establish local HF nets, need to be local to keep S/N ratios high, and get on the air during peak internet times and simply shut down the BPL service at the consumer level. Let the consumers complain about poor service. Then provide the defense of non-licensed Part 15 devices etc.

Running 1 KW as the minimum power necessary to communicate across town on 75 phone will certainly have an impact on local BPL users!!!

Ok, so there is one case... question is, was it "radio" related as to why he did as he did? Sounds like more to it than just being "CBers! Even if it does happen, I'm sure they are exceptions rather than a "common place" type of thing. Which was the point I am really making. I have a real problem with believing that a part 95 compliant radio is "just" snatched up out of no where for "no" reason. CL

Yep. The salarymen aren't happy.

We even got a piece of that action. There's a plant in Westmoreland, PA that was built by Chrysler in the 1970s but never used. So VW bought it and assembled cars there (I had two of them). Then VW moved the assembly plant to Mexico for the cheaper labor and the plant was sold to Sony, who made CRTs in it. (CRT manufacture requires a lot of energy so it's cheaper to make them here than Japan. Now CRTs are being phased out....

Our deficit is even worse than that because it's the active transference of
capital away from this economy.

I think that's premature, Steve. The NPRM is still open for comments, which means that FCC can still change things. The focus right now should be on NPRM comments. There are many points to be made about the various provisions of the NPRM. Note that BPL has *not* gotten an unconditional go-ahead from FCC - they have a number of requirements to meet. The focus now should be on getting specific, hard-and-fast definitions of those requirements, by paragraph and exact wording.

Read the original post down a little farther, Bill, and you'll see that FCC
changed the format around 1960. So your 1958 experience meshes perfectly with
the above history. Thanks for the info.

Yep. There are a couple of issues there - one is the use of His name, and the
other is rejection of the concept that there are various levels of
truth-telling. IOW if someone has to swear that they are telling the truth,
does that mean they are lying much of the rest of the time when they simply say
they are telling the truth?

Not being catholic anymore I wouldn't know, but I recall that during Lent meatless Fridays are still observed. Plus fasting. There are also plenty of Catholics who do it as a matter of voluntary religious tradition rather than church law.

But was it because they were CB's or because they were a group of people
parked in front of his house? Perhaps CB had nothing to do with it.

We manufacture and produce some things, but much of the production - automated and all - is moving to places like China.

And the concept of planned obsolescence has been reinvented....

The trick is to do that without creating more poor countries.

And the fundamental question is: Why are countries poor in the first place, and
how do countries get rich and stay rich without exploiting other countries?

Actually I think it's simpler than that. They have to consider both the
short-term buck and the long-term buck.

Henry Ford was criticized by other industrialists because he paid workers the
princely sum of $5 per day. His response was that it did not make sense to him
to have people building a product they could not afford to buy. He traded off
the short-term buck of higher wages for the long-term buck of a bigger market.
I don't think he did this out of any love for the workers or the country, but
rather because he saw a bigger picture.

They get the certification when it suits their purpose. I assume the ones with
meat would be costlier to certify, and so are left out of the process. Bean
with Bacon? Hmmm...what if it were turkey bacon?
>
> All this talk about kosher food is making me hungry.... <ggg>

They have. Mikey Powell was just in Raleigh (where I am)
talking to the public, and the paper quoted him on the BPL
issue among others. I don't have the exact quote but he
basically said, "We'll try not to harm hobbyists, but BPL
has too much potential (*) to let it be stopped."

(*) "Potential" = "people are going to get RICH on this."

And newsgroup access it seems. After months of working perfectly, my ISP is suddenly having "problems" with my newsgroup account that they just can't seem to fix. It all started gradually several days ago, right during this discussion, ending with no newsgroup access. Since this has happened before (with AOL years ago during a discussion about minority religions in a particular country overseas), this is an all too familiar pattern to me. Since they can't honestly say (and didn't say) I've violated their terms of service (or the concept of free speech in this country), they had to come up with a more creative way of hopefully shutting me up. It appears interfering with newsgroup access while acting innocent is the solution of choice (probably works for those who don't know about alternative newsgroup access).

On another note, somebody here also sent select copies of my messages to someone I'm associated with, carefully excluding any message that didn't fit his/her own little agenda (the person who complained to my ISP probably did the same thing). That was resolved after I sent a copy of the entire discussion, including the first two or three messages that started it and those which said I would object regardless of which religion. It was agreed that a discussion here has absolutely nothing to do with that association (none of their business - their words after basically saying they had no idea why this was even sent to them, something an employer might not have said).

I'll have to wait around a few more weeks to see what other mischief is in the works. But I thought these two examples would help illustrate what I said above.

Amusing! Here is another way to deal
with BPL - specifically anyone who sells
it or advocates deployment of the same
in a residential area:

Ok, your in Philadelphia, PA, US. Are you sure that you want to
advertise this to eliminate BPL interference?

Or just a joke, right?

Now thats a good idea. Kinda like retro radio. From what I heard, during the days of King Spark, it took KW levels to be heard in the next town. Lets go for it.

We can send traffic to each part of the country via the National Traffic System...them set up short and long range relay stations. Dang...just like it was in the beginning. I like it.

Under new FCC rules the 'policing' of CBers can be accomplished by the local police. I.E. If they are trashing up my TV. I can call the police and the cops can take them off the air as a nuisance.

Actual Amateur Radio licensees are exemp because why???? Because we hold a valid Federal License. Point counter point...cj?

Don't believe it CJ? Check it out.

How come I never heard of you until this group was linked to the 'cb' group?
Tells me a lot. I don't have a clue you say?

Get on the 'freeband', piss off your neighbor, and watch the cops shut you
down. Dumbass.

They have been testing BPL in Birmingham for a LONG WHILE. Im ready for it.
Got my KWs ready, Antennas pointed at the point where the 'BPL repeater'
will be. Lets see them get through that.

And you think CB is immune to BPL? You really are stupid.

Dan/W4NTI

How do you figure a outlaw CBer, operating illegal power, on un-authorized
frequencies have any rights to ANY frequency??

Don't exceed legal limit, you'll be braking the law. Speaking of laws,
did you hear about this Alabama law?

A new law recently passed in Alabama: When a couple gets divorced, they're
still brother and sister.
>

> And that trick is?

As I see it, one of the first things to do is to stabilize the stock market. Right now it is so short term, that it will do damage to the companies involved, and to workers. The pressure to increase profits on the short time scales now involved makes longterm actions difficult if not impossible.

I don't subscribe to the Japanese lifetime employment thing, but at the base of it, there is a valid idea. Humans desire a little stability. Remove that stability, and a whole host of problems erupt. Employer loyalty goes away, and when that happens, things suffer. If I know my employer will just as soon get rid of me for .001 percent rise in their stock, I'm not going to be willing to stay in all night to make sure the project goes out the door on time.

Note the present legislative efforts to shift workers from overtime eligible to salaried. From the supershort term view, this makes perfect sense. Reduction of the employees salary by mandatory unpaid overtime.

This will make for a quick jump in profits. From a longer term
perspective, it makes for a "what do we do next quarter to increase
profits" issue, it makes the job less desireable, because now the
employees are taking a wage cut, and they have it reinforced that their
empoloyer would like nothing better than to get rid of them.

True, but "meatless" Friday's never impacted my ability to
order a cheeseburger on any Friday...even 30 years ago.

The whole discussion is "much ado about nothing".

Cheers,

LOL - that would do it. But even 100 or 200 watts would be enough to
muck up BPL if there were enough of you in the city.

And the most amazing thing is that with just that outlook, we not only stabilize the situation, but we preserve the best part of how our econmmic system works.

I always thought that the best way was to let the businesses do their thing as much as possible, with a light touch. The time for intervention is when the business threatens the environment, employee rights (such as there are any) or of course engaging in illegal activities, which there

will always be some companies willing to do that. And of course the monopoly problems.

Consider the overall change in technology for almost anything.
Wholesale change almost every 15/20 years. If I hadn't had the
opportunity to learn semiconductors via additional training in the
Navy (1967) and then a full array of digital theory and application
compliments of "ma bell", I'd probably be pushing a broom
somewhere.

> And who pays for the retraining?

It depends. Even in telecommunications, the old days of heavy
training costs per employee are gone.

> >> I don't know of any country that grew prosperous on a service economy

>
> And the concept of planned obsolescence has been reinvented....

The obsolescence isn't planned...it just happens. Look at the
ever newer, faster and more memory for PCs. Consider too that
a few years back, marketing considered anything under $300
to be an "impulse buy" (i.e. no real thought as to price vs value
is applied by the consumer).

Cheers,
Bill K2UNK

Do you think these people that know enough about Newsgroups to "remove
your access" don't know about alternative access methods?

I also had some trouble with access for a few days. Turned out to be
server problems.

Hold on a second. someone did complain to your ISP? About what? There
is a major disconnect here.

> That was resolved
> after I sent a copy of the entire discussion, including the first two

I have no idea either. In fact, I don't understand what you're saying.
You're saying that someone complained to your ISP about your posts here
complaining about Kosher food, and they killed your newsgroup access?

After BPL gets up and going, watch Powell and some of the other high up FCC lawyers take jobs at outlandish salaries with some of the BPL companies as their payoff to them for pushing BPL through.

Do you receive any interference on HF from BPL?

Yes it will, and that's when Congress and G.W.Bush
will cough up the "Internet Counter-Terrorism Bill
of 2006" that will limit all HF amateur radio operators
to 5 watts PEP output to prevent this kind of
"cyberterrorism".

After all, they will argue, the QRP people showed that
amateur operators can work the world at that power level.
Anything higher than that should be viewed as really too
dangerous to be left in "civilian" hands. (They will nudge
the Democrats across the aisle and say "You know, just
like handguns", and it will be a slam-dunk).

Don't underestimate the political power of a 500-million-
dollar capital investment.

With the amount of interference and noise BPL will make, we will likely
not be in
violation of using excessive power "to carry on the desired
communications". And
we are federally licensed, so that would preempt any local rules and
also trump part 15.

I doubt that he even know it still exists. He probably thinks that ham
radio operators
are still using homebrew 75 watt crystal controlled CW rigs and modified
AM radios,
or boatanchors. And are boy scouts, etc....

>be done to neutralize this circuit"
>
>
>
Back in 1976 when I took the general written at the FCC field office, I
remember that
question was on it. The circuit looked a lot like an IF stage of an
early transistor radio,
which also used neutralization.

So of the other questions required knowledge of a few different points
of knowledge
to get right. "You have a linear which uses B+ of 800V. For use with
SSB, what is
the max current your ampmeter on the finals will show?" You had to know
1) The FCC
dictated input "plate" power for power limits for hams, 2) What the
power limit was
for SSB, 3) and how to factor in PEP averaging. And 4) how to calculate
plate power.
Knew everything except I was hazy on how to do #3. SSB voice is full of
short bursts
of higher power; however an analog amp meter's needle isn't responsive
enough to show
those spikes. So does this lack of response compensate for the FCC
permitting SSB
spikes up to 2KW, where CW is limited to 1KW (back then in the good 'ol
days)?
I made the choice to assume that this is true, and selected 1.25 amps
for the answer. No
way of knowing if I got it right or not, but I did pass (though by a
thin margin of one excess
correct answer). Embarrising as I was an EE student in college at the
time. :-) I did
ace the code test, which I had not expected to do so well on. Sometimes
wonder if

they gave me an all dit suffix (ISE) because I did so well on code.. :-)
I did ace my restructured
upgrade to "extra lite" a few years ago.

That means that the exam grader needed to know the material as well.
Someone of that
skill level costs more to hire than someone who just uses an answer key
to a multiple
choice test.

Jim,

You make a good point. It's happened before where amateurs lost
spectrum. Remember the UPS fiasco where they snagged a chunk of the 220
band?

And of course there was the LEO debacle.

We really need to fight this and make them do the right thing. And it's
a bit like un-ringing the bell. There are a whole lot of transceivers
out there that put out anywhere from 50W to 200W right out of the box.
And a whole lot more amps that kick up to the 1.5KW range. Granted, the
FCC knows who and where every ham in the U.S. happens to be, but they
don't know exactly what gear you've got do they? I mean I'm an extra
without an HF rig right now.

And when you think about it, a properly placed 5W transmitter will do
stuttering wonders for BPL.

BPL needs to be killed and pronto.

Hey Steveo.....he is saying that overpowered CB stations in the 'outlaw'
band. His name btw. Are as legal as a real federally licensed station.
And you agree? How about you keeping up.

No he's not, here's the OP. Show me where it says anything of
the sort.

I wrote here last week about the lawsuit that the local utility
here in Cincinnati has threatened me with. I consulted a attorney and after
looking at the law he advised me that the utility could sue me for because
I do not have a FCC license. I will be taking down my CB antenna from the
house. The main reason I am not fighting the utility is because of the cost
of defending myself in a lawsuit.
I really can't believe the responses I received with my question here last
week, but I know it is important for others to know about my experience.
Maybe some one with the money will be able to stand up against the
utilities that are now selling BPL access and sending out cease and desist
letters

Tom

Then -your reply was "just another CBer, who cares?"

From what I've read, you've already had at least one run in with
the power company. Bet they can't wait to bpl your ears now. hehe

Dave VanHorn <dvanhorn@cedar.net> wrote:

| Like it or not, CB and Ham radio are both in the same pot this time, and
| it's getting warmer.

The pot is bigger than that. For example, BPL could easily interfere
with the R/C bands (72 mhz, 75 mhz) as well. I believe the R/C bands
operate under rules similar to the CB bands ...

The AMA has investigated BPL, and officially expressed concern, but I
don't know if it's gone much further than that.

| This battle is likely to be won however, by complaints of interference to
| low band VHF public service frequencies, and airports.

Airports? Do they use 2-80 mhz much? Airplane radios typically use
108-137 mhz, which I wouldn't expect to be affected ...

I think that's already an FCC requirement Steve. Somewhere somebody
recently mentioned that warnings like that are required to be printed
in the instruction sheets which come with Part 15 wireless devices.
'Course the last thing anybody does when plugging widgets in and
firing 'em up is read the instructions.

FYI dan,

Randy Chapman aka "I Am Not God and Steve Parks aka Steveo and some
others, they are the same outlaw cb bunch that harassed leland Scott
and Dwight Stewart when they discuss respect for FCC rules. Wait till
you hear there excuses for being illegal LOL.

And what range is the 2nd harmonic of the BPL frequencies? 2x80 = 160mhz
which means the harmonics of the BPL signals can easily interfere with the
airplane radios.

BPL is more likely to affect VHF public service bands than aircraft
bands.

Which is "probably" why they've been busting their asses to move to 800 MHz in many places. OR "forced".. If it failed in other countries, why must they try to follow suit? One can only guess that the electric bills will have to be compensated to pay for it. So, in the end, we'll be paying for what? A BIG MESS..... So what else is new? I'm not sure when it was, but I read a while back that a Texas based Cable TV company was forced to shut down it's system when the leakage was interfering with Aviation ops. So, with mixing and such, I supppose it may be possible for the BPL to do the same. This really ought to get interesting. CL.

Here in Providence there is no money to buy new radio system for police
and fire. Right now PFD is on 154.something, and PPD is on 441.600 and
up.

As to the cable system - yes indeed leakage has to be contained. They
can interfere with pretty much anything but aviation. For example, cable
channel 18 sits right in the middle of the 2m band. And I know Cox in RI
is leaking because I hear a dead carrier of about S3 on that frequency.

I'd love to see Cox shut down for that.

The FCC ruling allows local law enforcement officials to take legal
action against ILLEGALLY operating CB operators. If the radio and
equipment is compliant with part 95, then local authorities are
powerless to act. against the operator.

Well, I can say one thing for sure, IF they force this county to go 800 and the county doesn't get enough funds to help out the stations and police to switch over, there are going to be many police and fire departments hurting big time. I know one right now that will be done - period. They are struggling as it is to stay afloat - in man power and equipment. In many more ways than one, when you look at the big picture it seems some forces/departments are being squashed - purposefully. The bar just keeps getting raised. BPL could be just the tip of a big ugly iceberg. Yes siree, it sure is going to get interesting to say the least. IF BPL does as much "widespread" damage as is thought - boy, the infrastructure - communications wise - will be flushed right down the toilet. Not a pretty thought. CL

Of course you do.

You (and your "mentor") are the one's with credibility problems
here.

So.....How do YOU go about "fixing" it...?!?! You do your best
to try and put the onus of inpropriety off on anyone BUT yourself.
Since I work the hardest to keep your frequent foolishness in the
public eye, I catch the flak.

No problem. The worst YOU have to suggest is that I am "nuts" or
"irrational" for not allowing you and Lennie to get away with bullying
and lying.

So far, you've failed. Try again...?!?!

I have found several references to "K8MN" in numerous issues of
several Amateur Radio periodicals over a period of years.

I find NO reference to N0IMD anywhere (except for Buckmaster, QRZ
and this forum...)

I have found several references to K8MN operating from various
foreign locales over the years.

I cannot find any reference to N0IMD operating from ANYwhere, let
alone outside the territorial boundries of the United States.

Now...I personally wouldn't choose the word "hotshot", but Dave
has certainly EARNED bragging rights that you seem to envy. You
certainly have tried to CLAIM similar bragging rights WITHOUT having
done the same deeds!

Sheeesh....

The "point" Lennie it trying to make us believe, Alun, is that
Amateur Radio is >>ONLY<< a hobby, with no intrinsic value to anyone
for any reason OTHER than recreation...That's not true.

His ulterior motive is to discredit Amateur Radio's countless
contributions, not only to the "history" of radio, but to the
"service" of the Nation as a resource to be called upon in any number
of disasters or emergencies.

He's unable to do that, either, but he obviously believes that if
he keeps repeating it often enough perhaps he and he alone can
re-write 90 years of history.

funny you should say this. you act like one(a cb'er that is!).

also, some former cb'ers (like me) got tired of dealing with the overcrowded conditions and the overall flakiness of the band. We (as former cb'ers) went up, took the test (btw, when I took mine, it was a lot harder than the ones they administer these days!), aced it and then awaited my ticket.

There are some people that I miss down on 11 and there are some I don't. However, since I don't have the equipment to go down there and say Hi, I don't go down there.

As an operator, I am not substantially any better (or worse) than most. In fact, I tend to lurk (listen) more than talk. Besides, a closed mouth gathers no foot.

Not true if the CDer is operating legally. The COPS have the authority
to enforce FCC rules...NOT to simply shut down any CBer because
that CBer is causing interference to TV. The expectation of the FCC
when it made the ruling it did, was that the TV interference problems
with CBers was from illegal stations (illegal high power)...not with
legal 4 watt CB stations.

In 1958, the exam grader was always an FCC official...not a ham.
Even when you took the test administered by a ham,
it was not graded by the ham, the test was
sent pack to the FCC who graded it.

Cheers,
Bill K2UNK

I'd suggest that you not rest on your laurels. Historically amateur
radio has provided an invaluable service to the nation. More
recently, more people have turned to cellular telephones to aid them
in an emergency. You do the math.

> He's unable to do that, either, but he obviously believes that if

Get over the glory of our history. Mike Powell asks, "What has
amateur radio done for me lately?"

Hah, funny one. I've seen amateur towers fall over. It can be months
or years if they're ever replaced at all.

I'm just disappointed that such an amateur great turns out to be an uninspiring dullard and frequent imbecile on RRAP. His continued use of self-inflicted stupidity is really unbecoming someone of his reputation.

You
> certainly have tried to CLAIM similar bragging rights WITHOUT having

How recent do you need? September 11, 2001 comes to mind. Then there was the great blackout of 2003. No doubt there have been smaller emergencies of which I haven't heard. There of course there are the emergencies to come such as future hurricanes. Although these have been rather quiet the last few years, that doesn't mean they are gone.

Then outside the disaster arena, there's all the marathons, walk-a-thons, bike-a-thons and myriad other public events for which hams routinely provide communications. Our club supports 4 or 5 of these per year.

Of course - the devil is in the details, though. How much environmental threat
is OK? What rights do employees really have?

Martha and her bookie...I mean broker...got convicted, didn't they?

Here's a datapoint for ya: The USA imported 57% of the petroleum used here last
year, up from 56% in the previous year. Domestic production is down slightly.
Even if the Alaskan refuge is drilled, it will be 10 years before full
production is reached there. Gasoline prices are already about $1.75 and it's
only March.

Meanwhile, SUV sales are at record levels and a process called TDP (Thermal
Depolymerization) is almost unheard of.

How do we get folks to take the long view again?

One word: Iridium.
>
>We really need to fight this and make them do the right thing.

Then do the following:

1) Download and read the NPRM

2) Put together coherent comments that refute specific points. Example: In paragraph 35 FCC says that it would expect hams to point their antennas to minimize reception of emissions from power lines. That should be refuted by pointing out that

1) many if not most hams do not have directional antennas for the bands in question

2) installation of such antennas is not practical in many cases

3) such a solution does nothing when the BPL noise is coming from all directions, as it would tend to do in a residential area of typical density where all of the wiring - including the low voltage house wiring! - is radiating BPL noise.

That's just one point in the NPRM - there are lots more.

You mean, by running high power and interfering with
the BPL access? Never happen. When Suburban Dad can't
get his sports and Mom can't get AOL and Junior can't
download Korean porn, all because of one 80-year-old
down the street with a hobby that 98% of Americans don't
even understand, they'll pull the rug out from under ham
radio faster than you can say "broadband." If there were
50 million active hams and we were well organized, we
might have a chance.

Actually I have been fighting them for 5 years now about their line noise problems. Notice I said problems.

Over this period of time the company has assigned a engineer from Birmingham to work DIRECTLY with me. Which he has done.

They have purchased new equipment and even sent this engineer to ARRL classes in Newington on RFI. He is now quite good at locating it.

In the period I have been working with him, about 2 1/2 years now. He has done yoeman service and has found MANY sources of RFI. All of which have been corrected.

In fact right now the latest one was recently cured and I am now tracking, what I hope is, the last one. I expect him to be out here again this week or next, to try and locate it.

So, you are right. Alabama power definitly knows me. And they know the have to clear up their noise. It is against the law to have such a high level. It takes time, and I happen to be in a rough area.

But now when the wind blows my neighbors don't lose their power. And wires dont hang loose and endanger children walking around the poles. And it is so much more quiet on HF now.

As for BPL, this same engineer tells me he was involved with the testing and can NOT see any future for it.

If you haven't already...go to www.arrl.org and download their CD of the
sounds of BPL. You will just love it.

I believe that is 145.25 . Just make it your new simplex frequency all around the COX area. Set your gear for tone squelch. And trash their entire system.

You know....Garbage out, Garbage in.

No I don't know what that means CL. Because there is NO SUCH THING. You
cbers are all a bunch of illegal, over modulating, trash mouthed goofballs.
At least that is what I hear everytime I listen there.

But they are ALL illegal is some way. You cant talk two feet with a legal
CB station. The 'big boys' won't let you. Thus they crank it up.

And how can the cops be expected to know the difference?

Bottom line...when the CBer is busted...he is gone.

Bring on the cops.

How many cops know the difference? I would guess ten country wide.

So, the get busted, the go off the air, the courts get to sort it out.

Still its end of problem. One less CBer trashing up the spectrum.

I wasn't talking about our towers, though, was I? I have one I've never put up. The point is that, for example, we can communicate in and out of a disaster area on HF SSB, for example, without needing a tower. Doesn't happen every day, but that's something to be thankful for.

That's because the part of your brain that should be concerned about
this issue has been erased by tightly focused selective amnesia brain
beams, and the previous thoughts replaced by what They think you should
think. Happens to the best of us. It just happened to me, right now.
I've completely forgotten what I should warn you about.

I think it had something to with top-posting being righteous and just.

Oh, well, never mind.

>How recent do you need? September 11, 2001 comes to mind.

Hams hijacked four airliners? :-)

>Then there was the great blackout of 2003.

Hams did that, too? Tsk, tsk, tsk... :-)

In all the thousands of press photographs, hundreds of minutes of press video recordings, any radios in evidence are all identifiable as belonging to governments or utilities.

IN the national press and in electronics industry trade publications were many mentions of communications supplies (HTs and telephones) rushed in to aid New York. The U.S. military adequately supported rescue at the Pentagon, also reported.

Note: The ARRL is NOT a "press," a journalism organization.

>No doubt there have been smaller emergencies of which I haven't
>heard.

Without any doubt of that...! :-)

Do you wish another recounting of the Great Blackout of the Greater Los Angeles area caused by the Northridge Earthquake a decade ago? No? Of course not, you refuse to view my posts... :-)

Continue to let the ARRL spoon-feed you all the information they think is "suitable" for you.

>Then outside the disaster arena, there's all the marathons, walk-a-thons,
>bike-a-thons and myriad other public events for which hams routinely provide
>communications. Our club supports 4 or 5 of these per year.

Even as I write this, the Los Angeles Marathon of 2004 is in progress. It is well-covered by a continuous telecast from one station and spot reporting on at least three other local TV stations. I am not listening to a sound-only AM station coverage. On-the-route video is provided by two-person teams on motorcycles equipped with two-way voice

and picture mobile equipment.

The video from locations along the 26.2 mile route show many different HTs being used by LAPD, LA government, and Marathon personnel identifiable by tags or outer vests. No one has mentioned any amateur radio activity yet. This isn't the first L.A. Marathon. Everything going well so far as it has for years.

The ARRL will no doubt post something later saying something like "the success of the L.A. Marathon was all due to the untiring efforts of many radio amateurs." That is, if they still recognize the west coast of the USA as belonging to the Union...

>true.
>
>Really? I don't see that at all.

Brian, the psychotic don't see things the same way that rational
humans such as you, Alun, and I do.

The gunnery nurse is stuck, wedged in his emotional rut of anger
and rage over long-ago perceived personal insults to his opinions
and statements. As the result all he can do is shout and holler and
egregiously denigrate his critics over the slightest hint of disapproval.

In his mental world amateur radio has substituted for "the corps"
and he must traverse all routes between the halls of Montezuma
and the shores of Tripoli, marching to the beat of olde-tyme
tradition and demanding strict and utter obeyance of the "gunny"
in a hobby activity. That is an absolute and cannot be otherwise.

That is also quite a bit sick. But, other amateurs allow his
presence, even with implications of "praise" for his exhortations
and pejorations. That implies some impurity of those others.
:-)

>> His ulterior motive is to discredit Amateur Radio's countless
>> contributions, not only to the "history" of radio, but to the
>> "service" of the Nation as a resource to be called upon in any number
>> of disasters or emergencies.
>
>I'd suggest that you not rest on your laurels. Historically amateur
>radio has provided an invaluable service to the nation. More
>recently, more people have turned to cellular telephones to aid them

>in an emergency. You do the math.

The gunnery nurse is still stuck in his obsessive rut and cannot tolerate a reality at odds with his mental fantasy.

That 100 million cellular telephone subscriptions exist in the USA as of U.S. Census Bureau data for 2003 is irrelevant to the gunnery nurse's fantasy world. He refuses to acknowledge that and focusses solely on himself and his relation to his activities as the only possible "truth." Anything contrary will bring forth a spate of the usual personal insults, spat with exaggerated anger and resentment.

The history of all radio has already been and has been documented in many other places besides Newington, CT. The contributions of amateur radio are quite countable, not so numerous as to be labeled "uncountable." The countable contributions - in the majority - all happened well before the gunnery nurse's life experience began.

>> He's unable to do that, either, but he obviously believes that if
>> he keeps repeating it often enough perhaps he and he alone can
>> re-write 90 years of history.

Recounting documented reality is not a "rewrite" of anything.

ALL radio is only 108 years old. The ARRL was organized in 1914 as a local New England radio club primarily interested in "relaying" telegraphic messages privately instead of using commercial telegram services. As a late-comer in U.S. national radio clubs (the Radio Club of America was organized 5 years before the ARRL and still exists today) it began to have dreams of greatness. But, the ARRL membership is still less than a quarter of all licensed U.S. radio amateurs. Their "greatness" seems to be a self-definition.

The use of "90" years is indicative of the mental tunnel vision and absolute Belief in the ARRL as the source, the oracle of All in radio. When the ARRL was first organized, "radio" was already 18 years old, having been demonstrated as a communications means in both Italy and Russia in 1896.

>Get over the glory of our history. Mike Powell asks, "What has
>amateur radio done for me lately?"

That is really for another thread, Brian, even though both of us do not look with favor upon Chairman Powell.

The gunnery nurse MUST wrap himself in the patriotic bunting and mythical glory of his corps-substitute. That is evidenciary in all the psychotic behavior shown in here over the past years. To him it seems not a hobby but a lifestyle, a "service" lacking only a common uniform. All must follow his personal patriotism or be villified forever and ever.

He wastes our time.

The international civil aviation band has been 108 to 137 MHz since
1955.

Examination of the very large table in Part 2, Title 47 C.F.R. will
reveal the radio service allocations in the USA for 160 MHz...and
every frequency from 9 KHz up to 300 GHz.

IFF an Access BPL system's bandwidth goes as high as 80 MHz
(not as low as 80 milliHertz as you wrote), then, in all probability,
any spectral content at 80 MHz *is* a harmonic of the wideband
digital signal.

Data signals do not appear as the narrowband, single-channel,
single-user relatively-simple modulation types found on HF ham
bands. Some self-education is in order to understand how much
of the rest of the radio world does their thing. The downside is
that such self-education takes you away from the Very Important

WORK necessary to be a proficient morseperson under 1930s standards and practices.

We 'must' keep the standards and practices of the 1930s alive into this new millennium?

496. Using Existing Law Against BPL

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-07 20:13:53 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <5oL2c.84040$C65.9507@nwrddc01.gnilink.net>
Source record: 88458

Forgive me if this has been mentioned before-
I haven't read this group for years.
Concerning fighting BPL, which the power industry
is ramming at us using Part 15, why can't
we use Part 15 to clobber *them?*

The FCC has a history of listening when you quote
their own laws to them. Here is a good one:

****
TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 15--RADIO FREQUENCY DEVICES--Table of Contents

Subpart A--General

Sec. 15.5 General conditions of operation.

(a) Persons operating intentional or unintentional radiators
shall not be deemed to have any vested or recognizable right
to continued use of any given frequency by virtue
of prior registration or certification of equipment, or,
for power line carrier systems, on the basis of prior
notification of use pursuant to Sec. 90.63(g) of this chapter.
(b) Operation of an intentional, unintentional, or incidental
radiator is subject to the conditions that no harmful interference is
caused and that interference must be accepted that may be caused by the
operation of an authorized radio station, by another intentional or
unintentional radiator, by industrial, scientific and medical (ISM)
equipment, or by an incidental radiator.
(c) The operator of a radio frequency device shall be required to
cease operating the device upon notification by a Commission
representative that the device is causing harmful interference.
Operation shall not resume until the condition causing the harmful
interference has been corrected.

****

We are federally licensed stations. If their "Part 15"
"incidental radiators" interfere with our stations,
the law REQUIRES the power companies to cease
their operations until the interferance is fixed.

Why can't we take this angle to clobber these guys?

Perhaps so, but it doesn't change the law.

> So, the get busted, the go off the air, the courts get to sort it out.

Did you mean to say: So the CBer gets busted, goes off the air,
and then the court gets to sort it out? If yes...

The cops can't bust a CBer just for being on the ait. The cops
have to bust someone and charge that person with one or more
specific violations of FCC rules. Causing interference to BPL
or any other service using a legal CB rig and antenna is NOT
against any FCC rule.

> Still its end of problem. One less CBer trashing up the spectrum.

Huh??? Even if the cops confiscate a legal CB rig, that does
NOT prohibit the same CBer from buying or using another one.

Now for a reality check...just how many local cops have actually
taken any steps against any illegal or pirate CBers? I'm guessing
next to none...much less a legal CBer?

Cheers,
Bill K2UNK

Cops can't stop you or anyone ele from doing something legal.
They may get a person to stop today, but unless they confiscate
the equipment, that person can be on the air again 10 minutes later.
Now if the cops confiscate, they better charge the person with
a specific violation pretty damn quick.

> No, you'll do as you're
> told. You will
> win in the long run (court), but you will do as you're told
> or you will go to jail.

Go to jail for what? The cops have to charge arrest a person
toi put the person in jail...and that requires a specific violation to
be charged. Another aspect is that the cops aren't the sole
arbiters of if someone gets arrested. The local prosecutor

will likly be consulted before any "RF ignorant cop" is given
free reign to arrest someone for an FCC CB violation.

Cheers,
Bill K2UNK

This argument sort of parallels the scanner in the car argument. A cop may not be aware of the rules/laws regarding such item - i.e. a ham having a scanner in the car when he is permitted by law. He busts you for it. YOU have your day in court. To sit there and argue with them in ANY case, is stupid. You exercise your rights to the judge. As long as HE is not on the take and reasonably competent, he should find you innocent. Let's face it fellas, there are HUNDREDS of laws out there. It is hard for them to know ALL of them. Especially on the street in a moments' notice. CL

Even if my tower should fall over, I can string up antennas and be back
on the air in hours of not minutes. Can you do that with your cell phone?

Sorry ole boy (danny) - truth is, I don't know where your lips have been. My ass is too clean for you. Who knows what diseases lurk in your mouth. The fact that you said trim my moustache first, tells me you are as queer as a $3 bill. NO THANKS..... I don't do queers. CL

Yep, thats right, another freeloader. That will learn me to defend your
right to be stupid. Bet I won't do that again.

And do you really want to get pissed off? I can collect social security in
a few years on top of it.

Damn don't you wish you could have had your life screwed up just so YOU
could be a freeloader?

But don't make any sense. I guess I need a translation book to understand
the CBism gibberish. Why is it you CBers talk so funny anyway?

Yeah, good excuse. Come on now, tell the real truth? Your just too
gutless to stand by your statements. You want to hide under a rock.

Right?

How would you know CL? Your just a CBer. You claim to be a ham, but offer
nothing to prove it. You don't even talk like a ham.

If it squaks like a CBer,
If it talks like a CBer,

Its a CBer.

That's exactly what the NPRM says will happen. Take a look and read it
carefully - it's full of verbiage that says the BPL guys must "remediate".

Of course that's great in theory, but the practice is something else again.

> How recent do you need? September 11, 2001 comes to mind.

I remember the video with music and scenes of the Twin Towers burning
and tumbling down. The caption read "NEVER FORGET."

Sorry Dee, but only four percent (4%) of those responding said that
9/11 terrorism was the most important issue in America today. The
mainstream press has gotten them in a frenzy over the economy and
jobs.

Then there was
> the great blackout of 2003.

Comms/Phones didn't go out. How was amateur radio useful when
everyone had comms?

> No doubt there have been smaller emergencies of

I know, I know. Does Powell know?

> Then outside the disaster arena, there's all the marathons, walk-a-thons,
> bike-a-thons and myriad other public events for which hams routinely provide
> communications. Our club supports 4 or 5 of these per year.

Those are good practice.

True enough. People might be able to use cellular phones to do the same.

Len, this is how "homelessness" starts. You get a middle aged guy who
should be on meds, starts down the wrong path, can't seem to get it
together enough to get back up, and the next thing you know, he's
sleeping under a bridge, fighting with other homeless men, and
sniffing glue.

It has been mentioned many times before. The fear is that commercial interests will be able to convince the FCC to change the rules so that hams have no defense against BPL.

Anyone who fraudulently takes my tax dollars is no friend of mine. If you're well enough to post messages on Usenet, and threaten people on the airwaves every day, you're well enough to get off of your lazy ass and get a job.

Based on what reasoning?

Even if a local cop was dumb enough to do that, any
1/2 brained attorney would have the charge dropped
in a heartbeat... if the prosecutor didn't do it first
because of the inapplicability of the charge to the
situation at hand.

Cheers,
Bill K2UNK

Now you're starting to catch on. You will beat the rap, but you won't beat the ride.

```

In the case above, let's assume the CB activity isn't mobile,
but rather from a fixed station in your home. In that case,
the cop has no basis at all to do anything more than knock
on your door and talk to you. Without a warrant to search,
the cop has NO ability to enter your home at all. To get a warrant,
the police need the OK of a judge...which isn't done for
just any reason.

> You exercise your rights to the judge.

I'd suggest it won't even go that far.

> As long as HE is not on the
> take and reasonably competent, he should find you innocent.

Any decent prosecutor wouldn't even let it go that far.
Proosecutor's don't like losing cases and probably
wouldn't press any charges at all.

> Let's face it
> fellas, there are HUNDREDS of laws out there. It is hard for them to know
> ALL of them. Especially on the street in a moments' notice. CL

And the cops don't give a hoot about CB. There's no
police glory in it.

BUT, do it once and the cop gets a warning from
the prosecutor to stop wasting his time. Additionally,
how does the cop gain entrance to a home to
arrest anyone based on what knowledge of a CBer being
on the air?

Cheers,
Bill K2UNK

same rules apply to all, and the powers that be say ignorance of the
law is no excuse if someone breaks the law, well that applies equally
to the law enforcement people. If I were in a situation where I was
fined or arrested when I did nothing wrong, they would be made to pay
for that error.

Actually, the concept of god can neither be proved nor disproved. Any evidence for the existence of god is purely subjective. Any evidence against the existence of god would be a futile attempt to prove a negative.

You know something, YOU ARE SO FULL OF SHIT. NOT ALL CBer's operate out of band or with more than the recommended wattage.. AND NOT ALL HAMS operate within the framework of Part 97 either. Check all those who've been fined, you'll see. YOU have a problem with using a broad paint brush. CL

happen
>>>there. Mexico is now experiencing import concerns too.
>>
>> Remember NAFTA and the "giant sucking sound"? Where's Ross now?
>
> Ahh, there was some comic relief!

Except Ross Perot was exactly right.

Consider this, too: We got 8 years of Bill Clinton in large part because Perot
split his opposition. We got Shrub in 2000 because Ralkph Nader did the same
thing to *his* opposition. And now ol' Crazy Ralphie is poised to do it again.

>>> What happens when the cycle is complete, and the last third world
>>>nation is brought up to modern standards will be the interesting thing.
>>
>> First you have to understand why it hasn't happened yet.
>
> There are plenty of countries yet to bring up.

The reasons it hasn't happened are things like:

- Corrupt strongman governments
- Overpopulation for the country's resources
- Cultural factors that hinder development
- Different values of the people
>

That and a whole lot more. In an environment where employees jump ship a lot,
the continuity of how and why things are done is often lost and the same
mistakes are made over and over.
>
> Note the present legislative efforts to shift workers from overtime
>eligible to salaried. From the supershort term view, this makes perfect
>sense. Reduction of the employees salary by mandatory unpaid overtime.

>employees are taking a wage cut, and they have it reinforced that their
>empoloyer would like nothing better than to get rid of them.

Yup - and that's just one effect. Another is that tax revenue and consumer
spending drop. Efficiency drops because more mistakes are made. The really good
workers migrate to jobs that still pay decently and the employers find they are
left with those who can't go anywhere else.

And then the organized labor movement is revitalized as more and more workers
realize their only strength is in unity. This costs companies even more in the
form of strikes and restrictive contracts.

>> major threats.
>
>Consider the overall change in technology for almost anything.
>Wholesale change almost every 15/20 years.

That depends on the technology. Houses today are not built much differently than they were 15/20 years ago. New materials and techniques are used alongside old ones. Most of those in the building trades, as well as DIY types, can keep up with the changes.

>If I hadn't had the

>
>It depends. Even in telecommunications, the old days of heavy
>training costs per employee are gone.

In your own example, however, your employer (Navy and Bell System) paid for your continuing education. You weren't expected to do it all on your own. More important, your new training built on your existing skills and knowledge so you could stay in the same field.

>> automated and all - is moving to places like China.
>>
>> And the concept of planned obsolescence has been reinvented....
>
>The obsolescence isn't planned...it just happens.

Much of it *is* planned. Products are rushed to market, often unready and of low quality. Companies do not support products after even a few years because they want you to buy the new products.

This isn;t a new game. Back in the late 1950s, US automakers "redesigned" their cars every year. Most of the "redesign" was cosmetic, not functional. Their goal wasn't to make cars that would last - they wanted those who were the new-car buyers to come back into the dealerships every year. They almost succeeded - at one point, the average new-car buyer was back every two years, and it was very rare for a car to last 100,000 miles even with the best of care.

>Look at the
>ever newer, faster and more memory for PCs.

Not just memory but every part of the machine - processor, drives, etc. However, these improvements are often done at the price of quality.

>Consider too that
>a few years back, marketing considered anything under $300
>to be an "impulse buy" (i.e. no real thought as to price vs value
>is applied by the consumer).
>
A few years back, the Dow was near 12,000, the Federal budget was balanced, Congress was trying to figure out how to spend the "peace dividend", unemployment *and* inflation were at record lows and a lot of folks I knew were talking about retiring at 55.

All changed now.

>In 1958, the exam grader was always an FCC official...not a ham.
>Even when you took the test administered by a ham,
>it was not graded by the ham, the test was
>sent pack to the FCC who graded it.

That was true right up to when the VEs took over in the early 1980s.

In the case of by-mail exams (all Novices and Conditionals, most Techs) you didn't know whether you had passed or failed until you got the envelope from the FCC six to eight weeks after your volunteer examiner sent the written test to them for grading. If you failed you had to do the whole thing all over again (code and theory), if you passed you got the license.

Those of us who took exams by mail were looking for the "thin envelope" (all that was inside was the license) and dreading the "thick envelope" (it had a letter telling you that you failed, plus retest instructions and a Form 610).

And I agree whole heartedly, they need a search warrant to gain access. Our cops here could give a shit less about CB in regards to busting some one. Matter of fact, some of them are CBers, Hams or both. But then again.... and this sort of answers another posts comments about "local law"... NOT ALL LOCAL LAWS are the same. They can vary greatly from place to place. CL

As well they should. They are human, not a God... They have to (or SHOULD)
operate with in the laws they are supposed to be enforcing. Some may "think"
they're above that law, but any decent judge or DA will put them in their
place. It would otherwise give them all a black eye. In the case of say a
scanner or CB, if they're not familiar with the laws, it seems it would be
better to err on the side of caution and take NO action, especially if no
other crimes were being committed in the process. CL

I'd sure like to but I brought 3 guys back to work this
week and I don't think I can afford the time away for
that and the Bristol race.

Congrats on the tickets, I really like that fast track. That
should be a blast with your family.

Viet Nam Dan apparently believes that if you're into CB radio, even if
you operate within the rules of FCC part 95, you are a criminal.

Just for chuckles and grins ..

About 5 years ago I was involved in a dispute with a neighbor. He was having his roof repaired. The roofers were dumping shingles on my side of the fence to be cleaned up later. I told them to get their ladder, the shingles and themselves off my property. He refused. I called the cops. The police talked to the roofers and then politely told me of the difficulties with the small property lines. I simply told the officer that I didn't have to let anyone on my property except him and only if he had a warrent. Did he have a warrent?

The cop made the folks leave my property.

End of story.

No handcuffs; that stuff has to go through the courts and local courts do not (I believe, but might be wrong) have jurisdiction over federally licensed stations be they commercial or amateur.

Jim,

Back when I obtained my licenses, I had an interesting experience. I had gone to Buffalo (FCC field office) for my 2nd phone during college in 1965-66. Then I obtained my extra and 2nd telegraph plus radar endorsement (same office, different day). I then went for my 1st phone in the summer of 1966 (after the other trips). A few days later, I received a letter from the Buffalo office! Man, was I worried. I opened it up and it began "Dear Jim, it seems you left your red sweater. Shall we send it or will you call for it?". The sweater had no identification. I had been in and out of that office so many times that they knew me LOL. I worked for WROC-TV that summer under the 2nd and then the 1st class license and returned to WWHG in Hornell, NY for a stint as chief engineer until I joined the Navy in early 1967. That little envelope gave me a fit until I opened it up LOL.

Viet Nam Dan and Babbling Bruce got married in San Francisco last
week. GWB is trying to pass the "marriage amendment" to the
constitution because he's pissed about not getting invited to their
wedding. (OK, I stole that quip from Letterman, or Leno, or whoever I
was watching that night)

You know, this is really sad... This problem is threatening to do damage to ALL OF US - be it CBers or Hams. Some among us have chosen to call the CBers names, saying they don't belong on the airwaves, etc. Then the insults went flinging back to the Hams... THIS SUCKS.

WE ALL are going to be affected by this bull shit. Rather than continue in a name calling event, we need to be aligning our efforts to stop the bull shit from happening. Whether you're a CBer who hates hams, or a Ham who hates CBers - NOW is not the time to be fighting amongst ourselves. United we stand, Divided we fall. In this case, none of us are better than the other, we'll all pay the price. It is time we all realize that. This bickering will be useless in the end and get us all - NO WHERE.

I'm just as guilty for getting my self involved in this mess... it simply isn't worth it. I've wasted more time than I care to think about. I'd rather spend my time wisely by learning all I can of the pending issue - it's history even in other attempts and seeing what can be done about it in a logical/legal manner even if in my own behalf should I have to defend my own actions after the fact. This crap here, isn't going to solve shit.

Have a nice day.... if you want to speak against me, that is fine - you're entitled to your opinion, be it correct or not. I'm blocking any of those who were a part of the problem - in particular - Dan - and the thread itself if need be.

CL

Your example underscores my point. There really is no one example...
but even in building construction, there is technological advances and
automation. Framing a house is much quicker with nail guns, etc.
Houses can and are prefabed (i.e. modular). Roof trusses almost
always come prefab.

That's not planned obsolescence, it is just poor quality.

> Companies do not support products after even a few years because
> they want you to buy the new products.

Companies can not afford to support products for long terms
and they MUST keep coming out with the latest products
because if they don't, the consumer will pass them by.
The irony of non-support for older products is that in
some cases, cottage or niche companies are created
to fill the void if there is sufficient consumer interest.

after acting like a asshole your going to cry for a truce LOL

Dont worry if BPL comes will make CB signals sound distorted and
unreadable and the band sound terrible. IOW just like it is now

We agree completely on that.

> But then again.... and
> this sort of answers another posts comments about "local
> law"... NOT ALL LOCAL LAWS are the same.
> They can vary greatly from place to place. CL

BUT, no town, city or state can make their own local
laws regarding CB use. The FCC ruling/regulation
some years back simply allows for local police to
enforce FCC rules. It did not grant local towns, etc
the authority to make up their own rules. As an extreme
example, a town can not ban the use of ham radio
or CB from private residences just because the local
residents might want that to happen.

Cheers,
Bill K2UNK

six to eigth weeks? I think my Novice took almost 3 months
to get to me after I took the test.

Thankfully I never got a "think envelope".

I agree. I think, however, the problem on the part of
some hams is related to illegal CB activity (i.e. high power,
freebanding, etc.). Most hams I know have no problem
with CB activity that stays within the allowed FCC
parameters. Some of us even use CB on occasion.
I do when I get together with friends of mine in our
antique car club road tours.

No truce... and certainly not crying. Just saying what a shame it is. And maybe I did act somewhat an ass hole as I allowed myself to be suckered into this mess (it does take a man to admit his errors), but I'm surely NOT alone. Later!

Agreed... and in agreement, I say it doesn't stop those who have no clue of radio or it's laws - who govern - from "trying" to stop radio in it's path. Some of those who sit on councils and so on, are like bad cops.. They get a title and automatically their head swells. They think they can act in total disregard. So they set stupid rules. Some of which they may have no way to enforce. IF those rules aren't enacted as "ordinances", they have little chance of being enforced just speaking of the local level. Federal law "usually" supercedes most any local or state law. I say usually, because I've heard from some sources that there are exceptions.

Yours is one of many I've enjoyed. While there are problems with illegal operations in both ham and cb - some of which spur a lot of the arguments herein, none of it will matter in the end, if this comes crashing down as it is expected.

It was said in here that Part 95 doesn't exist.

Part 95 as of 2002 .... at least it was still alive then. I can't see how it was erradicated. It now also includes FRS, GMRS, R/C.

As well it should. We are still down 2 million jobs since 911. Mine was one of the ones lost in the months after the attack. I am trying to run my own business now, but it is a hard struggle. I would go back to working for someone else, but there are no jobs in my field. The very few job ads I see ask for impossibly high qualifications (for me anyway!), as employers can pick and choose from the glut of people looking for work. For example, I have a BS and they are looking for PhDs.

If you still have a well paid job it is easy to overlook the situation, but it's dire. Employers are not hiring at anything like the rate expected at this stage of an economic recovery. 2.4 million jobs were lost, and only about 400,000 new ones have been added. It's impossible to look at those numbers and not conclude that the economy is in terrible shape. Other economic indicators may be good, but the employment problem is very real and very large.

The current administration might prefer that we all focus on security and foreign wars, but that's because if too many people look too hard at the employment numbers it will hurt their chances of reelection. FWIW, I doubt that any government can really influence the economy more than a tiny amount, but the political facts of life say that people will vote for someone who promises to fix the economy.

All the White House can do is distract, or 'run interference'. The employment stats are so bad that it's rather like trying to hide an

elephant under the rug. That's not to say that the other issues aren't important, although personally I'm not happy about what they are doing in either of these areas.

That's because they learned to make do with the people they had, and are
reluctant to add more now.

Seems to me that the real problem is more fundamental. Short term fixes won't
change long-term problems.

For example, importing 57% of our oil, and letting that number rise every year,
isn't the right trend, but it's been allowed to go on because it's cheaper in
the short term than. (Please don't blame the environmental concerns of drilling
in the Arctic and similar places until you have solid numbers on what oil from
those places costs to extract, and how much can actually be extracted.)

Another example is the expectation of a trained workforce without investing the
resources in education to produce that workforce. "Resources" doesn't just mean
"money", either, though money is a big part of it.

I think reliance on oil is too strong. More needs to be done on other sources of energy. Fat chance with oilmen in control, not that much was ever done before.

Agreed. The cost of education is running out of control. Grants and scholarships would make more sense than tax breaks for the rich.

Let's assume that the average worker is expected to job shift 4 times
over their career. You get your Bach in say Computer programming. Work
in tech support for 4 years. maybe you're working on your Masters. Your
job disappears so you either go back and finish you Masters (is this a
good move, considering the field is apparently moving to India) or start
over again in another field. Said other field might just go to some
other country also. So you have to do this 5 times over your working
life, and each degree costs an average of 50K. Keep in mind that the
first degree will cost more, and successive ones relatively less if
inflation doesn't increase the price. Of course the education price
depends on your school. Really good schools cost a good bit more. So
what you are going to do is spend maybe a quarter to a half million
dollars for education over your career, and at these education points,
you are going to have to find a way to support yourself and maybe a
family. What this all sounds like is a great way to go into personal
bankruptcy.

Sorry, it just won't work and I don't care what model yer usin'. If
you are doing a job that requires a couple months of training, you can
get away with job shifting from time to time. If your job training takes
years to do, then it simply isn't going to work.

> And who pays for the retraining?

In our area, a whole glass production plant has been disassembled and
moved to China, where they are putting it back together. A lot of good
paying skilled jobs lost.

Another capacitor making plant has just shut down to move out also.
these jobs weren't as good paying, but they were still jobs. All this in
just one year.

Perhaps they should eat cake?

| Several popular exam books I've looked at expire in June of 2004 for
| the General class license. How long before we start seeing the new
| editions come out. Reason I ask is because I'd like to start studying
| but don't think I'll be ready by June and if there are changes, I'd
| just rather wait for the new edition.

The tests usually don't change much from revision to revision.
Studying the book that's one generation out of date isn't going to
hurt you much.

The general test isn't much harder than the technician test. If
you've got am ind for this stuff, just skim over whatever book you've
got for that level of test (even if it's one or two revisions out of
date) a few times, then go to http://www.qrz.com/testing.html and take
the test a few times. Once you can consistently score over 80%,
you're ready to go take the test and almost certainly pass.

I passed all three in a few months with little experience and little
effort, using three books (technician, general, extra) I bought at
Radio Shack for $1 each. I think the technician and extra books were
out of date, and the general book wasn't, but it didn't really hurt
me.

(Now I just need to pass the morse code test. My brain has a lot
harder time with that than the technical tests ... but I'm working on
it.)

644. When is a re-stocking charge a good idea?

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-08 17:49:48 UTC
From: wa8mea@hotmail.com
Message-ID: <8a260fb2.0403080949.29a92f1@posting.google.com>
Source record: 88708

I've been a customer of AES for years. Spent THOUSANDS with them, usually buying at least a couple of different rigs a year.

Just got a call from one of the fellas there. I just returned a little 2/6/70cm HT in which I couldn't see the little keypad very well....among other technical problems with the HT. Only had it a couple of days. I requested the substitution of another HT and a 2 meter beam...resulting in them receiving $100 additional.

The gentleman was very polite, but said because there was some type of wear on the beltclip (and I certainly didn't see any. But there could have been since I did use the clip.), they couldn't resell the device as new...so they would have to charge me a 15% re-stocking fee. ($39)

As a ham businessman myself, I KNOW the cost of doing business. But I know I wouldn't go as far as to possibly alienate a customer in long standing. In fact, I have several customers in long standing and have had to "bite the bullet" on a couple of returns from them....just because I DID NOT want to alienate them from doing further business with me. I felt the greater need to keep these people as customers.

I'm not really mad. I understand both points. There probably isn't a big profit margin in this gear. But would you risk loosing further business from a long time customer? Or would you write it off??? (And we all know, that's exactly what you can do with damaged merchandise...write it off.)

What's your opinion???

From Green Beret Officer Don Bendell

The old hurts are surfacing and the feelings of betrayal by fellow citizens, and their leader stirring them up, are breaking my heart again. I am being cut in the same scar. How did we who served in Vietnam suddenly become cold-blooded killers, torturers, and rapists, of the ilk of the Nazi SS or the Taliban? Most of us were American soldiers who grew up idolizing John Wayne, Roy Rogers, and all the other heroes. That was why I volunteered. But for political expediency, John Kerry has rewritten history, again. After spending only four months in the country of Vietnam, John Kerry testified before Congress in 1971 with these exact words about incidents he supposedly witnessed or heard about from other vets: "They personally raped, cut off ears, cut off heads, taped wires from portable telephones to human genitals and turned up the power, cut off limbs, blown up bodies, randomly shot at civilians, razed villages, shot cattle and dogs for fun, poisoned food stocks, and generally ravaged the countryside of South Vietnam."

I was a green beret officer who volunteered for duty in Vietnam and fought in the thick of it in 1968 and 1969 on a Special Forces A-team on the Ho Chi Minh Trail, just for starters. We were the elite. We saw the most action. Everybody in the world knows that. But we did not just kill people, we built a church, a school, treated illnesses, passed out soap, food, and clothing, and had fun and loving interaction with the indigenous people of Vietnam, just like our boys did in Normandy, Baghdad, Saigon, and everywhere American soldiers ever served. We all gave away our candy bars and rations to kids. Our hearts to oppressed people all over the globe.

My children and grandchildren could read your words, and think those horrendous things about me, Mr. Kerry. You are a bold-faced, unprincipled liar, and a disgrace, and you have dishonored me and all my fellow Vietnam veterans. Sure, there were a couple bad-apples, but I saw none, and I saw it all, and if I did, as an army officer, it was my obligation to stop it, or at the very least report it. Why is there not a single record anywhere of you ever reporting any incidents like this or having the perpetrators arrested? The answer is simple. You are a liar. Your medals and mine are not a free pass for lifetime, Senator Kerry, to bypass character, integrity, and morality. I earn my green beret over and over daily in all aspects of my life.

Eight National Guard green berets, and other National Guard soldiers, have been killed in Iraq and Afghanistan, and you totally dishonored their widows and families by lumping National Guard service in with being a draft-dodger, conscientious objector, and deserter, just so you can try to sabotage the patriotism of our President who proudly served as an Air National Guard jet pilot. I have a son earning his green beret at Fort Bragg right now, and his wife serves honorably in the Air National Guard, just like President Bush did, and I am as proud of her as I am my son. I volunteered for Vietnam and have no problem whatsoever with President Bush being our Commander-In-Chief. In fact, I am proud of him as our leader.

John Kerry, you personally derailed the Vietnam Human Rights Bill, HR2883, in 2001, after it had passed the House by a 411 to 1 vote, and thousands of pro-American Montagnard tribespeople in Vietnam died since then who could have been saved, by you. Earlier, as Chair of the Senate Select Committee on MIA/POW Affairs, you personally quashed the efforts of any and all veterans to report sightings of living POW's, when you held those reins in Congress. You have fought tooth and nail to push for the US to normalize relations with Vietnam for years. Why, Mr. Kerry? Simple, your first cousin C. Stewart Forbes, CEO, of Colliers International, recently signed a contract with Hanoi, worth BILLIONS of dollars for Collier's International to become the exclusive real estate representative for the country of Vietnam.

"Hanoi John," now that it works for you, you beat your chest about your Vietnam service, but to me, you are a phony, opportunistic, hypocrite. You are one of those politicians that is like a fertilizer machine: all that comes out of you is horse manure, and you are spreading it everywhere.

Medals do not make a man. Morals do.

From Green Beret Officer Don Bendell

The old hurts are surfacing and the feelings of betrayal by fellow citizens, and their leader stirring them up, are breaking my heart again. I am being cut in the same scar. How did we who served in Vietnam suddenly become cold-blooded killers, torturers, and rapists, of the ilk of the Nazi SS or the Taliban? Most of us were American soldiers who grew up idolizing John Wayne, Roy Rogers, and all the other heroes. That was why I volunteered. But for political expediency, John Kerry has rewritten history, again. After spending only four months in the country of Vietnam, John Kerry testified before Congress in 1971 with these exact words about incidents he supposedly witnessed or heard about from other vets: "They personally raped, cut off ears, cut off heads, taped wires from portable telephones to human genitals and turned up the power, cut off limbs, blown up bodies, randomly shot at civilians, razed villages, shot cattle and dogs for fun, poisoned food stocks, and generally ravaged the countryside of South Vietnam."

I was a green beret officer who volunteered for duty in Vietnam and fought in the thick of it in 1968 and 1969 on a Special Forces A-team on the Ho Chi Minh Trail, just for starters. We were the elite. We saw the most action. Everybody in the world knows that. But we did not just kill people, we built a church, a school, treated illnesses, passed out soap, food, and clothing, and had fun and loving interaction with the indigenous people of Vietnam, just like our boys did in Normandy, Baghdad, Saigon, and everywhere American soldiers ever served. We all gave away our candy bars and rations to kids. Our hearts to oppressed people all over the globe.

My children and grandchildren could read your words, and think those horrendous things about me, Mr. Kerry. You are a bold-faced, unprincipled liar, and a disgrace, and you have dishonored me and all my fellow Vietnam veterans. Sure, there were a couple bad-apples, but I saw none, and I saw it all, and if I did, as an army officer, it was my obligation to stop it, or at the very least report it. Why is there not a single record anywhere of you ever reporting any incidents like this or having the perpetrators arrested? The answer is simple. You are a liar. Your medals and mine are not a free pass for lifetime, Senator Kerry, to bypass character, integrity, and morality. I earn my green beret over and over daily in all aspects of my life.

Eight National Guard green berets, and other National Guard soldiers, have been killed in Iraq and Afghanistan, and you totally dishonored their widows and families by lumping National Guard service in with being a draft-dodger, conscientious objector, and deserter, just so you can try to sabotage the patriotism of our President who proudly served as an Air National Guard jet pilot. 'recommended power level'.....see, you don't even understand what I'm talking about. It's not 'recommended power level'. It is maximum power authorized. See the difference? I rest my case.

And I am fully aware that there are hams doing the very same thing. I figure that they got their training on 11 meters. (Thats CB, in case you don't know).

Not on local repeaters? I am on any and all repeaters I desire to be.
Unfortunatly there is no one to talk to until a tornado comes by.

Threaten who ? Jammers. So what?

What was that about threats? Now Now "CJ....er
"CL", you really need to control yourself.

Don't matter one whit. I still don't have to pay any tax.

Dan/W4NTI

Sure - but those changes occur slowly enough that builders can keep up
with them. And they're not faced with career obsolescence. The
introduction of nail guns and PVC pipe has not eliminated the need for
carpenters and plumbers.

While building a house isn't exactly cheap, here in the USA we manage
to do it with almost all domestic labor and materials. If it can be
done in that industry, why not others?

> > care.
>
> Yet today the average car hit 200K miles or more.

Yep - and here's why:

Up until about the mid-60s or so, US automakers focused on the sizzle
rather than the steak. Their focus was on making lots of cars, and if
they polluted, didn't last or weren't as safe as they could be, that
wasn't much of a big deal. They fought all sorts of innovations
because they were afraid of tarnishing the image. Example: they didn't
like seat belts in part because of the cost but also because they're a
reminder that you could die in your car.

Then US automakers got a 1-2-3-4 punch in about a decade:

1) Safety issues
2) Pollution issues
3) Fuel economy issues
4) Foreign competition/quality issues

Detroit took a real thumping from all four, in large part because the
foreign automakers were more experienced building safer, cleaner, more
efficient cars that would last longer. The Big Three had to be dragged
kicking and screaming (by way of legislation requiring things like
seat belts and dual brake systems) into making better cars. In at
least one case (Chrysler) the Feds got involved with loan guarantees.

>
> Your point?
>

That a lot has changed in the past few years.

> > All changed now.
>
> Your point?

That something needs to be done.

One factor that hasn't been mentioned is the effect of societal changes, particularly in the middle class.

40 years ago, it was typical for Dad to work and Mom to stay home with the kids and they all lived a comfortable if not luxurious middle-class existence. (Yes, there were plenty of exceptions, but as a rule if Dad had a good job, Mom did not have to work outside the home when the kids were small).

Today, two-career families are the rule rather than the exception, and almost always by necessity. First it's to pay off their own educations, then to afford a house, then kids, then the kid's education, then retirement. And that's if they're lucky and all goes well!

That's only because the VA doesn't read Usenet. If it did, you'd be
busted for fraud and have to get a job like the rest of us.

Even without the large profit margins, the store can and does send the
unit back to the manufacturer in many cases. Plus, if they take a loss
on an item it gets recorded as an expense on their part. Lowers their
overall tax liability.

Original message:
> From: David Stinson <arc5@ix.netcom.com>
> Subject: OT: Open Letter from a Green Beret to John Kerry
> (copy of editorial by Don Bendell snipped)

Mr. Stinson, are you employed by, a volunteer at, or otherwise associated with the Bush for President campaign?

It's interesting to note that when I did a Google search of "Don Bendell" the first site that comes up is titled "Welcome to Bendell Enterprises": it has a link to Mr. Bendell's agent prominently displayed on the page. The fact that Mr. Bendell is, as a Republican spokesman, so obviously (you'll excuse the pun) "bush league" is indicative of how desperately the Republican National Spin Meisters are trying to find anything or anyone who will denigrate Senator Kerry's war record.

No matter: Mr. Bendell was there, so I'll give him the benefit of the doubt. I doubt that his recollection is the only valid one of that place or time, and I also doubt that he has the one true account of Vietnam. Loyal service, even as part of an A team, does not grant an old soldier the right to rewrite history.

I was there, too: and everything John Kerry said is true.

That Mr. Bendell didn't see it doesn't mean it didn't happen: he is entitled to support and protect the memory of his comrades, as am I - but not at the expense of whitewashing what others have documented. Yes, some soldiers _did_ cut the ears off VC dead. Yes, some soldiers did other unspeakable things: just ask Rusty Calley if you don't believe me. Some of it, I saw with my own eyes, some I read in the courts-martial and/or arrest reports I saw as a Military Policeman.

Mr. Bendell is entitled to be proud of his relatives who are in the National Guard, especially in peacetime when there's little chance they'll be put in harm's way - and I am entitled to hold someone who is standing for election to a higher standard. The rich and powerful have a greater obligation to the ideal of service than do ordinary men and women, and Shrub wasn't there.

Whatever Mr. Bendell's perception of the Vietnam war is, he's not entitled to shoot the messenger who first brought the ugly, sad truth to America's attention in a way that could not be denied or swept under the rug. That John Kerry chose to leave the war zone early is no shame: nobody who's been shot at blames another for taking advantage of the "three strikes" rule, which spelled out early return for a sailor who was wounded three times. Only an former General Officer like President Eisenhower could tell the

military brass "I will not send one American boy into that elephant grass", and for the same reasons, only a decorated commander like John Kerry could have founded Vietnam Veterans Against the War.

At a time in our nation's history when the rich and well connected were scurrying to park their sons' yachts in safe backwaters, a well connected young man raised his hand, took an oath, and took everything that came with it. You can't fake that kind of courage, and you can't spin his opponent's kind of cowardice. John Kerry was there.

Bill Warren

P.S. Readers are invited to cross-post this to any newsgroup where Mr. Bendell's editorials are appearing.

P.P.S. FWIW, some soldiers did kill dogs: the unfortunate animals couldn't read signs, and those that were lucky enough to wander through a minefield unscathed would, sad to say, leaves tracks that Viet Minh sappers could follow. I did, too: in my case, as a courtesy to our Vietnamese workers, who wanted them for food but were unable to participate in butchery because of their religeous beliefs.

(William Warren is a pseudonym I use to protect my privacy. I will respond with my actual name to anyone who asks offline: modify the return address in an obvious way to email me directly. I don't work for the Kerry campaign, or the government, or the Democratic party, and have never even met the Senator.)

THE FOLLOWING ITEM APPEARED IN A NON-PARTISAN (BUT EXTREMELY
CYNICAL) NEWSLETTER FOR INVESTORS. THE NEWSLETTER HAS BEEN RELENTLESSLY
CRITICAL OF BUSH ADMINISTRATION ECONOMIC POLICIES.
And now this about `Lucky Jack Kerry` from a source we`re not sure we
can reveal, said to be a retired Rear Admiral:

`I was in the Delta shortly after he [Kerry] left. I know that area
well. I know the operations he was involved in well. I know the tactics
and the doctrine used. I know the equipment. Although I was attached to
CTF-116 (PBRs) I
spent a fair amount of time with CTF-115 (swift boats), Kerry`s command.

`Here are my problems and suspicions:

(1) Kerry was in-country less than four months and collected, a Bronze
Star, a Silver Star and three purple hearts. I never heard of anybody
with any outfit I worked with (including SEAL One, the Sea Wolves,
Riverines and the
River Patrol Force) collecting that much hardware so fast, and for such
pedestrian actions. The Swifts did a commendable job. But that duty
wasn`t the worst you could
draw. They operated only along the coast and in the major rivers (Bassac
and Mekong). The rough stuff in the hot areas was mainly handled by the
smaller, faster PBRs.

(2) Three Purple Hearts but no limp. All injuries so minor that he lost
no time from duty. Amazing luck. Or he was putting himself in for medals
every time he bumped his head
on the wheel house hatch? Combat on the boats was almost always at close
range. You didn`t have minor wounds. At least not often. Not three times
in a row. Then he used the
three purple hearts to request a trip home eight months before the end
of his tour. Fishy.

(3) The details of the event for which he was given the Silver Star make no sense at all. Supposedly, a B-40 was fired at the boat and missed. Charlie jumps up with the launcher in his hand, the bow gunner knocks him down with the twin .50, Kerry beaches the boat, jumps off, shoots Charlie, and retrieves the launcher. If true, he did everything wrong.

(a) Standard procedure when you took rocket fire was to put your stern to the action and go balls to the wall. A B-40 has the ballistic integrity of a Frisbee after about 25 yards, so you put 50 yards or so between you and the beach and begin raking it with your .50`s.
(b) Did you ever see anybody get knocked down with a .50 caliber round and get up? The guy was dead or dying. The rocket launcher was empty. There was no reason to go after
him (except if you knew he was no danger to you just flopping around in the dust during his last few seconds on earth, and you wanted some daring do in your after-action report). And we didn`t shoot wounded people. We had rules against that, too.
(c) Kerry got off the boat. This was a major breach of standing procedures. Nobody on a boat crew ever got off a boat in a hot area. EVER! The reason was simple. If you had
somebody on the beach your boat was defenseless. It couldn`t run and it couldn`t return fire. It was stupid and it put his crew in danger. He should have been relieved and
reprimanded. I never heard of any boat crewman ever leaving a boat during or after a firefight.

`Something is fishy.

`Here we have a JFK wannabe (the guy Halsey wanted to court martial for carelessly losing his boat and getting a couple people killed by running across the bow of a Jap destroyer)
who is hardly in Vietnam long enough to get a good tan, collects medals faster than Audie Murphy in a job where lots of medals weren`t common, gets sent home eight months early, requests separation from active duty a few months after that so he can run for Congress, finds out war heroes don`t sell well in Massachusetts in 1970 so reinvents himself as Jane Fonda, throws his ribbons in the dirt with
the cameras running to jump start his political career, gets Stillborn Pell to invite him to address Congress and Bobby Kennedy`s speechwriter to do the heavy lifting, winds
up in the Senate himself a few years later, votes against every major defense bill, says the CIA is irrelevant after the Wall came down, votes against the Gulf War, a big mistake since that turned out well, decides not to make the same mistake twice so votes for invading Iraq, but oops, that didn`t turn out so well so he now says he really didn`t mean for Bush to go to war when he voted to allow
him to go to war.

`I`m real glad you or I never had this guy covering our flanks in Vietnam. I sure don`t want him as Commander in Chief. I hope that somebody from CTF-115 shows up with some
facts challenging Kerry`s Vietnam record. I know in my gut it`s wildly

inflated. And fishy.`

> recently, more people have turned to cellular telephones to aid them
> in an emergency. You do the math.

There's no math to do, Brain.

There's ALWAYS been more telephones than licensed Amateurs, yet
there's ALWAYS been a need for persons able to conduct emergency
operations via two-way radio.

The invention of the cellular telephone has not changed that at
all. Cellular telephones are still dependent on wire-line based
infrastructure and thousands of very expensivecellsites that are fixed
assets.

Fixed assets in a tornado are ALSO called "collateral damage".

Man-made events are just as devastating as recent events have
demonstrated.

> > He's unable to do that, either, but he obviously believes that if

> > re-write 90 years of history.
>
> Get over the glory of our history. Mike Powell asks, "What has
> amateur radio done for me lately?"

It's not "history", ya dimwit...It's RECENT current events. The
most recent firestorms in the west being testament to that.

Try again, Brain....

Why? Because I can type and talk on a radio? Please provide me with your
medical degree, and I will gladly submit to your exam.

That other things now take precedence over 9/11 is normal and to be
expected. That does not negate the very necessary contribution that ham
radio made to a major emergency in a current situation.

> Then there was
> > the great blackout of 2003.

Phones and comms did go out in some areas here. Ham radio turned out to be
a valuable asset.

> True enough. People might be able to use cellular phones to do the same.

Probably not though. The cell phone system is only set up to handle normal
levels of usage. It gets bogged down when traffic levels rise dramatically
as they do in emergencies. If any cell sites are lost in the emergency that
either cuts off that area from cell service entirely or further overloads
the system. In the case of 9/11, calls placed via landlines and/or cell
phones took 30 minutes or more to get through and some did not get through
at all.

Much of it is due to changing expectations as to what is acceptable as a standard of living. The typical family 40 years ago in the major metropolitan areas either lived in an apartment or in an 800 sq. ft. house. A family with a single income today can still afford an 800 sq ft house. However that is now considered unacceptably small. They want a 1200 sq ft house as a minimum. That is just one example of changing expectations that have driven us to two-career families.

This incident occured years befor HR2346 (or whatever number that was). And
nuisance laws vary depending on your locality, as well as their method of
enforcement.

>Actual Amateur Radio licensees are exemp because why???? Because we hold
>a valid Federal License. Point counter point...cj?

Hams regs do not exempt a ham from local nuisance laws. You can be in 100%
compliance with federal law, but you can still be violating local laws if you
are creating or causing a nuisance with your station. Your FCC license is not a
'get-out-of-jail-free' card.

>Don't believe it CJ? Check it out.

I'm not CJ, but what should I 'check out'?

> is OK? What rights do employees really have?

Sure. We have a local case in which a massive amount of known Iron
Pyrite rock was dumped in a small valley with a stream running along the
bottom of the valley. The valley is all filled in now. The predictable
happened, and we now have a massive acid drainage problem that will kill
many tourist frequented streams and will probably sterilize the creeks
it runs into and construction on the highway has been stopped, and we
have a real mess on our hands.

Not much of a gray area there I think. And we can keep busy enough with
the blatant cases that we don't have to go after Joe six-pack and his
Sunday BBQ or his lawnmower.

> Martha and her bookie...I mean broker...got convicted, didn't they?

Some people are making a good profit.

> Meanwhile, SUV sales are at record levels and a process called TDP (Thermal
> Depolymerization) is almost unheard of.

Wellll, you are partially correct. You lump SUV's as if they are all of the Excursion/Suburban/Escalade type. And that is wrong. I just bought an SUV that gets in the 20's in town, and low 30's on the highway. It's downright tiny by comparison, and is a very responsible vehicle as far as resources go.

And I don't think that any of the Bio fuel options are viable or even desirable. To see what I mean, replacement of even a tiny fraction of what we use now in fossil fuel will take a lot of biofuel, and how much can we make?

The tragedy of the biofuels is this:

America decides that we should go ethanol in a big way. Lots of corn and other sources are grown for fermentation. After all, this will use up that silly surplus, right?

Only then it's no longer surplus. There would be a lot of pressure to grow more and more of the raw materials. Have you seen what has happened to much of the great plains lately? Salt desert, and besides that, the aquifer is not being recharged except at a very slow rate.

Now when push comes to shove, and population starts to strain our ability to produce food, you make the decision. Food or fuel? Who drives and who dies?

> How do we get folks to take the long view again?

It will probably take running out of/low on resources of one kind or the other. Like the above.

That is because they intend to get rid of every possible employee
whenever possible. Why would you train people that aren't going to be
working for you in a few years?

Side note: These good folk could probably save money if they were to
get a bill passed requiring all Americans to learn Indian language in
school. That way they wouldn't have to train their new help to speak
English.

And the new car is so expensive that it darn well *better* make 200 K
miles. They have become waay too expensive. Did you know that they are
offering 7 year auto loans now? All the "innovative" techniques that the
companies had to do over the years to sell cars as the price went up is
reaching an end-game for them. Most people do not want to pay $500-$600
or more a month for a vehicle.
Leasing looked good for a while, but of course you have no trade-in, and
the lease company doesn't really want you to trade the thing in, they
want you to buy-out. But oh those car payments!

Some things just "write themselves..." :-)

By the way, the Los Angeles Marathon was a success on Sunday,
record turn-out, everything run just fine. It can be done very well
without any amateur radio help but the ARRL copy scribblers
would have a cow about that. :-)

>have no defense against BPL.

Do you have FCC NPRMs on your "killfile," too, Dee? :-)

If you look carefully at NPRM 04-29, you will find that they are NOT
going to change the levels of incidental radiation to above today's
standards. The Commission isn't giving in to any Access BPL
company's request to increase the incidental radiation.

The FCC is NOT sanctioning Access BPL nor is it "licensing" it.
They can't get involved directly with an Access BPL unless a
system's service area crosses a state boundary. All the FCC can
really do is regulate INCIDENTAL RF radiation from any system.

Part 15, Title 47 C.F.R. is involved with INCIDENTAL RF radiation.

Are you or is anyone displeased with the levels of incidental
RF radiation now in the Regulations (and has been the same for
years)? If so, what have you DONE other than scare up the
village that some bogeything appeared?

The NPRM 04-29 changes are mainly with a definition of the
service and some of the test methods to insure that incidental RF
radiation stays within regulations...regulations that aren't going to
be raised. READ the NPRM and all its footnotes before jumping
off into some rant.

Do you or anyone else have a bitch, gripe, or other complaint about
the existing incidental RF radiation limits? If so, DO something
about it. COMMUNICATE with the FCC...or with your elected
congresscritter who could, if you don't write in crayon, forward it to

the FCC which is obliged by law to make it part of the pulic record.

Or, you or anyone else can stay on newsgroups and foment more
and more hysteria about falling skies like so many headless
Chicken Littles.

Do you or anyone else want to make a case about "monitoring the
interference" from an Access BPL system now under test? If so,
get some amateurs who Know How To Measure, use some radio
receivers that have been calibrated with a traceable source, using
good (professional) standards and practices, describing all of it
along with the monitoring record. A tape or WAV file full of noise
all by itself isn't going to cut it as the "evidence." [I can generate
one of those using a SWLBC portable and standing next to a power
substation and it won't be worth technical squat] Know what you
are doing technically. FCC's Office of Engineering and Technology
can talk technical. Few hams can.

Or, you can sit back and play morseperson on your radios and let
the ARRL do all the work. But, think about it. The A in ARRL
stands for Amateur. ARRL has only one legal firm representing
them in DC. There are over a half dozen Access BPL companies
and more in the wings, PROs who want some potential profit, all
with their own legal firm representatives. Legal-wise, the ARRL is
outnumbered. Quit trying to act the spoiled child "deserving of
the attention" because you are hams and essentially hobbyists.

By the way, if you or anyone else wants to assert you are
untouchable becasue of that license, try reviewing Parts
97.101 (d), 97.121, and 97.303 (a). Or contact the Enforcement
Bureau at the FCC.

But, if you insist that the sky is falling even when it isn't, continue
the hysteria build-up and make yourselves and the "amateur
community" look like dummies.

Cell phones need towers to operate?

My wife and I keep our cell phone in the car's glove compartment.
Hasn't fallen yet. :-)

However, if there's a NEED to operate on HF from a disaster area,
I'd rather depend on an Army National Guardsman walking into it
carrying an AN/PRC-104 HF transceiver. No tower needed. Whip
antenna is tuned by a built-in automatic antenna coupler anywhere
in the HF spectrum. Thousands of them operational since before
1986.

The local police are ONLY enabled to inforce the FCC laws. That does
NOT include shuting down a legal CB station just because it might cause
interference.

Additionally, local nuisance laws are NOT applicable to authorized radio
transmissions per applicable FCC rules.

> >Actual Amateur Radio licensees are exemp because why???? Because we
hold

not a
> 'get-out-of-jail-free' card.

It is against any effort to enforce a nuisance law against a legally
operated ham (or CB) station. If you think otherwise, please
provide applicable case law. From being a ham for
40+ years I have never heard of a single successful case of
local nuisance laws being used against a ham station.

Cheers,

The reality of housing is that it isn't mass produced because
we don't want to all live in identical homes. That leads to considerable

customization and often to totally unique homes. Not so with
consumer products.

Of course! That's the kind of details I'm talking about.

OTOH, one of the excuses given by industry is that environmental concerns cost too much.

Ethanol has other problems, too, such as poor performance at low temperatures.
TDP is something completely different.

> Now when push comes to shove, and population starts to strain our
>ability to produce food, you make the decision. Food or fuel? Who drives
>and who dies?

Exactly.

Point is, there's no single simple answer. Instead, we need a coordinated
approach on many fronts. Efficiency - conservation - recycling - new technology
- infrastructure. Most of all, changes in how we live.
>
>> How do we get folks to take the long view again?

It doesn't take any medical diploma to know that your primary
disability is the inability to distinguish the difference between
"your" and "you're" when writing a sentence. That's hardly an excuse
for ripping off the taxpayers.

(unatributed rant snipped)

They really ought to give you GOP PR types a quick course in Netiquette before they set you loose on the world: your ALL CAPS post shows you haven't been associating with the hoi poloi for a long time.

Let's see, where can I start:

"Organization: Posted via Supernews, http://www.supernews.com. "

Nice one! No inconvenient IP address to trip you up. Win 98, too, at least according to your headers. You guys _do_ occasionally learn from your mistakes, don't you?

"Non partison (but extremely cynical) newsletter for investors..."

Wow, I'm impressed. In terms of FUD and intimidation, that's at least a 5 out of 10. I can't question your honesty because I'm not an "investor", and I'm ashamed to admit that I don't hang around with non-partisan and cynical newletter types. Way to go, GOP PR man!

"The newsletter has been relentlessly critical of Bush administration economic policies".

Oh, of course, and that's -so- easily verifiable, given your thorough coverage of the "newsletter" and it's background. I'm just brimming with patriotic left-wing fervor now that I know your "newletter" is "critical" -

nea, "relentlessly critical" - of shrub and his let-them-eat-dog-food economic policies. I'm all warm and fuzzy, you've won me over, I trust you without reservation. With the issue of your background, credentials, agenda, and employer settled, let's get to the good part.

"...from a source we`re not sure we can reveal, said to be a retired Rear Admiral..."

Ah, jeez, Mom, can't I meet the Real (sorry, "Rear") Admiral? Can I? Huh? Puhleeze?

I can't reveal *my* source, but (s)he said that it was really a retired corporate huckster collecting corporate welfare from the big island in Hawai, who dusts off his traveling salesman cap and majik elixar bottles every four years when the oil boys throw enough money at him. Trust me: my source is just as unimpeachable as yours!

"1) Kerry was in-country less than four months and collected, a Bronze Star, a Silver Star and three purple hearts. I never heard of anybody with any outfit I worked with (including SEAL One, the Sea Wolves, Riverines and the River Patrol Force) collecting that much hardware so fast, and for such pedestrian actions. "

Hmmm - "collecting" is a nice choice here: it infers that Kerry didn't deserve that "hardware", but leaves me a little flat on the impedimenta of how he "collected" that "hardware" without his commander and (IIRC) four other senior offices certifying that he deserved it. Oh, well, let's not get bogged down in details like exactly which Admiral's rear this came from.

BTW, that use of "pedestrian" is first rate FUD: it infers that nobody was really shooting at anybody, nobody got wounded, nobody killed, nothing much except the usual humdrum routine of having men in black pajamas shoot at you with - heaven forfend! - real 7.63 mm ammunition - instead of the deadly innuendo and poisonous slander that Kerry's own countrymen would shoot at him 30+ years later.

Of course, in the world of big oil, big banks, big "investors", and big lies, only the ungrateful and unapreciative working man - like me - would be so rude as to ask why this "Rear Admiral" didn't come forward way back when. Only someone who didn't understand the winks and nods that those-in-the-know trade during $5,000 per plate dinners could possibly be so impertinent as to ask how an arrogant, rich, drunk daddy's boy could have the gall to hire you to slander a reputation built on blood and deeds, when his was built on daddy's money and a PR firm's expertise.

It's a great country: only in America could someone type out bald-faced lies and not mention that Shrub was, depending on which version is currently being floated, either in Alabama, Arkansas, or Georgia - but not Texas, where he was supposedly assigned. Only in America could an unnamed, unavailable, unattributed "Real (sorry, 'Rear') Admiral" be created out of whole cloth so that the oilmen could grasp for another four years of let-them-eat-dog-food.

Shrub was drunk, although the details are, uh, foggy.

John Kerry was there.

And that, Mr. PR expert, is for attribution.

Bill Warren.

Dee, as you can see, Lennie the Lame and his dusty sidekick
PuppetBoy can't stand facts. Espeically glaring, up front ones...

> In all the thousands of press photographs, hundreds of minutes
> of press video recordings, any radios in evidence are all
> identifiable as belonging to governments or utilities.

"Thousands of press photographs..."...?!?!

YOU personally proofed ALL those "THOUSANDS" of "press
photographs" and determined that NOT A ONE contained ANY picture of
ANY Amateur Radio realated or supported activity...?!?!

OR...(and more likely)...the few pictures you DID see in the LA
Times didn't have anything YOU deemed relevent, ergo you just
extrapolated the numbers to sound like something impressive...

> IN the national press and in electronics industry trade publications
> were many mentions of communications supplies (HTs and
> telephones) rushed in to aid New York. The U.S. military
> adequately supported rescue at the Pentagon, also reported.

And from the desks of the NY OES, the American Red Cross,
Salvation Army, NYC OES, NYPD, FDNY and numerous other "offical"
agencies ahve come letters of commendation and gratitude for Amateur
Radio support.

> Note: The ARRL is NOT a "press," a journalism organization.

Doesn't matter. Can you DISPRROVE anything they have
"reported"...?!?!

> >No doubt there have been smaller emergencies of which I haven't
> >heard.
>
> Without any doubt of that...!
>
> Do you wish another recounting of the Great Blackout of the Greater
> Los Angeles area caused by the Northridge Earthquake a decade
> ago? No? Of course not, you refuse to view my posts...

Your posts are still irrelevent.

Documentary evidence of participation by Amateur Radio
organizations exists within the California OES.

> Continue to let the ARRL spoon-feed you all the information they
> think is "suitable" for you.

What "spoon-feed(ing)", Your Scumminess...?!?!

What has been inaccurate? Where is the evidence of dishonesty or
misrepresentation of facts?

> >Then outside the disaster arena, there's all the marathons, walk-a-thons,

> and picture mobile equipment.

Uh huh...and the news is...?!?!
>
> The video from locations along the 26.2 mile route show many
> different HTs being used by LAPD, LA government, and Marathon
> personnel identifiable by tags or outer vests. No one has mentioned
> any amateur radio activity yet. This isn't the first L.A. Marathon.
> Everything going well so far as it has for years.

I lived in the LA area for years and was a praticipant in two
marathons. Even though some hams got thier pictues in video bites, I
don't remember any of them having ever been interviewed nor Amateur
Radio being mentioned by name.

Does that exclusion mean we weren't there or didn't contribute?

I saw lot's of pictures of Goodhew and Schaeffer Ambulances in
those video shots, although none of them were mentioned by name
either...Does that mean those third party EMS units didn't
participate?

I also saw countless shots of runners with Evian water bottles
and drinking from cups with Gatorade logos on them...I never heard
them mentioned by name eithr. Soooooooo......What's your excuse for
THOSE exclusions, Scummy One...?!?!

> The ARRL will no doubt post something later saying something like
> "the success of the L.A. Marathon was all due to the untiring efforts
> of many radio amateurs." That is, if they still recognize the west
> coast of the USA as belonging to the Union...

No...they will do like they have (accurately) done before, and
will say Amateurs CONTRIBUTED to the overall event, and that TEAMWORK
between the supporting agencies resulted in a safe event.

Your excuse THEN will be...?!?!

Steve, K4YZ

No they did not, which means those cell towers can fall over as well.
Your paper clip isn't going to help much when the cell tower is out of
commission. Think you can communicate with you little cell phone if the
tower is down? As Alun stated, hams don't need a tower, a tall tree,
from the apex of the roof, just any support that will get the antenna up
in the air and we are back on. Not so with your cell phone, if the tower
is down (dosen't even have to be physically down, just off the air) and
your cell phone makes a good paper weight.

$39.00 is a very modest restocking charge. I certainly wouldn't feel "alienated".

>ANY Amateur Radio realated or supported activity...?!?!

Absolutely. I watched TV for many hours after the 11 Sep 01 attacks.
Got 30 complete video photographs every second. A thousand frames
of video are seen every half minute and a fraction. :-)

Do the math...if your meds have kicked in and you can still grasp
a pencil (or crayon) without breaking it...

All nice little pieces of paper, suitable for framing.

>> Note: The ARRL is NOT a "press," a journalism organization.
>
> Doesn't matter. Can you DISPRROVE anything they have
>"reported"...?!?!

Not in here. :-)

No one can "disprove" something that doesn't exist and the ARRL
"news" does so much selective editing and selective adjectiving it
makes amateur activity sound absolutely totally completely
responsible for anything they report. :-)

Make that "ACS" sweetums. Try to get your acronyms straight.

Or were you blood-pinned with some kind of distinguished civilian
service medal and suffered an infection?

>> Continue to let the ARRL spoon-feed you all the information they
>> think is "suitable" for you.
>
> What "spoon-feed(ing)", Your Scumminess...?!?!

See above on "selective editing." League copy scribblers are very
good at what they do. When they do a page make-up it's a cold
day in Newington when any other radio service is mentioned. :-)

> What has been inaccurate? Where is the evidence of dishonesty or
>misrepresentation of facts?

Take a trank, gunnery nurse. When it has kicked in, try reading or
viewing something BESIDES "official" information from Newington.

>> >Then outside the disaster arena, there's all the marathons, walk-a-thons,

> Uh huh...and the news is...?!?!

The "news" is that YOU are NOT Dee.

You could hold yourself down in public and let other folks have a chance
but your obsession won't let you, will it?

The L.A. Marathon was on Sunday. Nice pictures in the TIMES this
morning, more video from the marathon on TV.

Still haven't heard of all the noble, traditional, inspiring ham radio
aid to the L.A. Marathon. Lots more good news about the DARPA
Grand Challenge...first look at the team entries from display at
the Fontana raceway. But, you don't know anything about the
DARPA Grand Challenge, do you? :-)

One million bucks to the winner... :-)

>> The video from locations along the 26.2 mile route show many

>> coast of the USA as belonging to the Union...
>
> No...they will do like they have (accurately) done before, and
>will say Amateurs CONTRIBUTED to the overall event, and that TEAMWORK
>between the supporting agencies resulted in a safe event.

The spirit is willing, but the actual flesh seems to be invisible. :-)

But, the ARRL is your source of amateur news and you are a
Believer in the Church of St. Hiram. You MUST discredit anyone
who spoils the old, old images of nobility, purity, and good from
the "services" of glorious amateur radio. You cannot help yourself,
poor baby.

Go snaffle a trank and try to calm down.

I'll still be around doing what I care to do. All your false and
misleading pejorations are empty words from a nutso.

All you are doing is wasting everyone's time, especially yours.

> Whether I've failed or not is immaterial to your being nuts. You
> would be nuts with or without my presence on rrap. Best of luck.

Luck is not needed here, Brain.

That which you call "nuts" is simply your attempt to writhe away
from being publically humiliated over and over, Brain.

Perhaps if YOU reconsidered YOUR own rhetoric and conduct, that
which you consider "nuts" would cease...?!?!

>>I<< consider anyone who publically expresses admiration for a
person who has been thoroughly documented as a liar and antagonist as
"nuts".

>>I<< consider anyone who makes public assertions that they
either cannot substantiate or validate via some third party source as
"nuts".

>>I<< consider anyone who's been caught doing those things who
then PERSISTS in doing them, contrary to evidence against them, as
nuts.

All of those things, Brain, would be you...

If calling me "nuts" makes you sleep better, or you feel you got
your sucker punch in, well then, I hope it makes that warm fuzzy
feeling for you. I think the evidence of odd behaviour rests on YOUR
shoulders, Brain...not anyone elses.

That I (or anyone else) apparently manage to effectively rub your
nose in your own errors and foolishness doesn't make me (us)
nuts...Just glad for the entertainment you provide. For that I (we)
thank you.

Well, Brain, as long as you keep posting obviously erroneous and
intentionally deceptive stuff, I guess I will have something to "talk"
about.

As for "proving" to any potential employer that I am "insane",
how about if I direct YOUR employer to this forum...specifically
selected passages wherein you make assertions you can't/won't back up
ALONG with YOUR expression of admiration for a person publically known
to be dishonest and deceitful...?!?!

We can further direct your employer to literally hundreds of
posts where you refer to third parties by demeaning or belittling
endearments where THEY did not lavish such endearments upon YOU.

Yeah...I got you two twerps by the tail and watching you writhe
around provides a bit of morbid entertainment. If you consider that

"insane", well, go right ahead. But you are, afterall, the source of my "material".

Thanks.

>Agreed. The cost of education is running out of control.

It has far exceeded the general inflation level, yet is more necessary than ever.

Here's one data point:

In the fall of 1972, when I entered the University of Pennsylvania, tuition alone (no books, fees, etc.) was $3000/year. Which was very expensive at the time. Today the same school charges more than 10 times that. But will the starting salary offered to a BSEE in 2006 be more than 10 times what it was in 1976, when I graduated? Is fininacial aid 10 times what it was in my time there? Nope.

Not ANYWHERE, Lennie...You cannot provide ONE instance of
documented evidence that ANYTHING the ARRL has printed in QST or any
other periodical.

> No one can "disprove" something that doesn't exist and the ARRL
> "news" does so much selective editing and selective adjectiving it

So...we have a round-about way of you acknowledging that you LIED
about the ARRL's alleged "dishonesty"...

Per your OWN words..."No one can "disprove" something that
doesn't exist..."

Not that anyone else believed you, but at least we now have you
acknowledging that you were mistruthful.

Hardly "irrelevant mention" An absolutely accurate analogy, one
you tried to avoid but didn't.

I saw a clip of a public event in which an 18-wheeler replete
with large logo of it's owner on the side...Am I to assume (under the
usual Andersonian logic) that this grocery delivery truck was
"supporting" the event...???

> > I also saw countless shots of runners with Evian water bottles
> >and drinking from cups with Gatorade logos on them...I never heard

I'll ask you again...Did the exclusion of SPECIFIC MENTION of the
products or firms I cited in teh previous post mean THEY DIDN'T
CONTRIBUTE...?!?!

> But, the ARRL is your source of amateur news and you are a
> Believer in the Church of St. Hiram. You MUST discredit anyone

> who spoils the old, old images of nobility, purity, and good from
> the "services" of glorious amateur radio. You cannot help yourself,
> poor baby.

There was nothing in any of your post that "spoil(ed)" any of the contributions of Amateur Radio in ANY event, Lennie.

You, on the otherhand, once again spoiled your family name by TRYING (unsuccessfully) to do teh spoiling.

> Go snaffle a trank and try to calm down.

More LennieMade "shortened" medical terms, Lennie...!?!?

> I'll still be around doing what I care to do. All your false and
> misleading pejorations are empty words from a nutso.

Sorry that I hurt your ego, Lennie, and spoiled yet another opportunity for you to lie, mislead and antagonize without interruption.

> All you are doing is wasting everyone's time, especially yours.

Nope...just yours...You just make it too darn easy to spoil YOUR rants...You AND Google give me everything I need...

Thanks.

The company making the road. My fault, I reread my post and didn't made
that clear at all. It was part of a large road building project. One
portion of it included basically lopping of the top of a mountain, and
filling in a small valley next to it to even out the terrain.

Oh, they do cost! But we have this warped mentality that some groups
are exempt from responsibility. If we wreck a large part of say the
tourist and vacation and vacation product industry in our area, we lose
all that money. And it's so much more money than would have been spent
by doing the job correctly in the first place. The little stream
connects into prime *native* fishing stream, a prime bass fishing stream
and a large lake heavily used for recreation.

My folks taught me that if it costs too much - don't do it.

Is that a definition thing Jim? The feed stock is certainly
biologically based. And it's a good process, that simply uses offal to
make it's goop.

On a small scale, it can be helpful, but I still believe that it is
insufficient on a large scale. Although maybe..... Soylent oil? 8^)

I can vouch for that from personal experience. But perhaps AES doesn't want to take the time to send it back to Icom for a re-pack. Probably easier for them to sell as a demo.

Another scenario I almost brought to AES's attention was calling Icom and requesting a new belt clip. I doubt this piece of plastic was worth $39. But then again, parts have been known to cost 20 times more than they are worth.

I think they saw an opportunity to make a little extra cash on the transaction since I didn't use my charge card this time around. When you use a charge card, you protect yourself against re-stocking charges.

I think buying/selling is a give and take proposition. I purposely didn't return the $13 coax adapter I bought with the rig, figuring I could use it at some later point. I am aware of the cost of doing business, and didn't want to "pile on" when returning the items. But after their re-stocking fee, I figured I'll return it and get my $13 back. I will also use their toll free number from now on. I use to foot the bill for phone ordering, using the toll number. Don't think I will from now on.

Agreed up to a certain point. I think that Mr Nader will find that he gets
far fewer votes this time. The Democratic primaries have shown that people
are focussed on getting the oilmen out of the White House. That and the
fact that they saw what happened last time are likely to decimate his
support.

I think access to education is already a problem and likely to get worse. At the same time it's probably about the only antidote to offshore production.

Even then, you have countries like India to worry about. Despite their overall poverty they have more English speaking educated middle class than America (their sheer numbers help here), and they are willing to do white collar and professional jobs for much less.

I've never read "Front Page Magazine", and it's qualifications as an "Non partison (but extremely cynical) newsletter for investors..." remain open to question. The appeals for money on the splash page leave me to wonder which investors it's appealing to, but for the sake of argument, let's assume they really are an actual magazine with a meaningful readership.

The story you cite begins with the line

"The following was sent to a Marine chat net by a retired Marine Master Sergeant
who was in S-2, 3rd Bn, 1st Marines, Korea in 1954."

But, from there, it is a copy of the smear attributed to a "Rear Admiral" in your original post. I don't believe it was actually posted by a Marine, either: there's too much wrong with it.

1. The gratuitous reference to Korea, and the way in backfires on the PR man:

I don't know if being in the "3rd Bn., 1st Marines" has some cachet amoung Marines, but it smells like FUD put in to catch the eye of a key swing vote - older veterans. Anyone in Korea in 1954 would have to be at least 68 years old now, and I have never seen anyone of that age group participating in something as new as a "chat net".

2. "I know the tactics and the doctrine used, and I know the equipment. ".

This doesn't make sense: why would a Marine be trained in small boat tactics? What "doctrine" is he talking about? How would a Marine learn about Swift boats or PBR's, when the Marines pride themselves on being combat infantrymen and not "Rust pickers"? Don't forget, he'd have been an Sergeant

at the time of Vietnam, only ~30 years old: hardly an age or rank that would be expected to cross-train with Navy boat crews. More to the point, how many Marine Corps Master Sergeants would write like that?

3. Finally, the coup-de-grace that reveals this to be just more disinformation: "The details of the event for which he was given the Silver Star make no sense at all."

If whoever wrote that was actually a Marine, and had actually been in combat, he'd know that nothing ever goes according to the book. When the shooting starts, men revert to their most basic capabilities, and if Kerry chose to confront an attacher directly, instead of running away ("put your stern to the action and go balls to the wall") that speaks volumes about the fact that he put himself first in the line of fire. I don't doubt for a second that it wasn't the correct "Standard procedure", but procedures are designed by statisticians who want commanders to do what will give the greatest probability of success in an average encounter. Kerry threw away the book and did it himself instead of risking his men's lives: that's why he got the medal.

This all smells: second and third-hand slander, without a name attached, without confirmation (something a real "magazine" would be expected to do routinely). I don't believe it.

Of course, the Republicans hope it doesn't matter: having thrown the manure in front of the fan, they're hoping that it will stick to Senator Kerry and he'll be too busy cleaning it off for anyone to trace it back to the source before the election.

Concerning your earlier post:

> You're not real fond of opposing opinions are you?

I welcome opinions of all sorts, whether or not they support my viewpoint. So long as the sources are available, I'll accept quotes without prejudice, too.

Mostly, I'm "not fond of" Shrub's attitude that not being caught in a lie is the same thing as telling the truth. What I am especially "not fond of" is unattributed slander, quotes-out-of-context (as you did to me), nameless and unverifiable attacks, or the attitude some people take that it's OK to question Senator Kerry's courage while forgetting George Bush, Junior's cowardice.

Bill Warren

> Meanwhile, SUV sales are at record levels and a process called TDP (Thermal
> Depolymerization) is almost unheard of.

TDP is another scam.

"This is classic pseudoscience - bordering on fraudulent!

FROM Discovery article May 03 :

"Thermal depolymerization, Appel [the guy who built the TDP pilot plant in Philly] says, has proved to be 85 percent energy efficient for complex feedstocks, such as turkey offal: "That means for every 100 Btus in the feedstock, we use only 15 Btus to run the process."

HOWEVER

"Their energy numbers are [highly] specious. They give efficiency as the energy content of the input waste over the energy use. That's flat-out misleading. They should tell us usable energy of the output fuel. That's all the matters. We do not rate coal plants by the energy of the coal they burn, after all, all we care about is the output. This little evasion suggests that they are not being completely honest in their entire analysis." (Bonehead at Metafilter.com)

An actual [honest] measure of TDP efficiency would contrast usable energy content of the OUTPUT (not of the inputs) to the energy required to drive the reaction/process.

"[This] is called marketing. Anybody selling anything has an interest in convincing you that it will give you eternal life and the Buddha's ten secrets of personal enlightenment. Their energy estimate is so dishonest that it hardly seems useful to give it any more time. A 100-BTU chicken couldn't possibly yield more than a few BTU's of useable fuel, a small percentage of which could actually be converted into useable energy. It's probably better to just heat your home by burning the chicken." {Atlantic Online post}

WRT Economics:

"If the New, Improved Poo Fuel and OPEC oil both come to market at $30/barrel or so, the only difference will be in the profit margin for Poo Energy Co. " {metafilter.com post}

This is NOT new. Chemistry is chemisty, period. It sure looks like a pyrolytic process to me, even though they've given it a snazzy new name. Their comparison chart also sets up pyrolysis as a straw man -- pyrolysis can also handle slurries,liquids, etc. and yields highly uniform products. So this appears to be 'fancy'[read: hyped, creatively marketed] pyrolysis to me. Also appears to be a 'classic' example of "research" finding the results they want to find. Virtually all experimental design (methodology, instrumentation, analytical tools) are carefully chosen (crafted) to identify the expected outcome. Choices are directed by prejudice - in this case, economic. Given sufficient data, statistics can be employed to 'prove' any theorum. Unless someone can tell me what I'm missing, of course...

"Most men think that they think, but what they are actually doing is rearranging their prejudice"(Bertrand Russell)

The answer IS simple, and it is that Kerry was a young, impressionable, idealistic junior officer with a boat and crew to care for, and with a dangerous and thankless job to do, and what were undoubtedly "Latrine Lawyer" fables at the time he heard them got lost in the noise until they were later verified by those who participated or those who apprehended the participants. I don't care when Kerry realized that the stories were true: I care that he had the guts to act on those truths.

As I said before, Mr. Bendell is not the guardian of the "one true version" of Vietnam history. His stipulating that he "saw none" just before bragging that he "saw it all" is understandable: old veterans, both he and I, each have our own version of the truth as we saw it, or (more accurately) as we remember it.

It happened. You don't need to take my word for it: look up the courts-martial records and interview the convicts who did it. Of course, the "30 old white men" who run America are counting on the likelihood that nobody will bother.

Oh, sorry, I thought we were having a discussion about politics: you appear to be reciting a speech by Juan Peron.

Call me back in ten or twenty years: if your "friends" stay in power, you'll be living in a tent, choosing between buying food or medicine, and you'll own nothing but the TV set your masters will use to tell you what to think.

I pity you.

Bill Warren.

Ok, then, take Kerry's own quotes and ask why he refuses to release his
military medical records to the pundits to 'prove' the PHs that got him
out of Nam in four months.

And while you're at it, see if you can find a copy of his book - you
know, the one with the upside-down American flag on the cover.

What we don't need in the White House is another liar or hypocrite and
his self-proclaimed "war hero" status raises some serious concerns about
his integrity.

You're having way too much fun with this topic and clearly you have the
ability to rant much better than I so I'm going to bow out now. Maybe
Stinson will continue to give you more rant opportunities. I think
you're a nut and I'm going back to messing with radios.

-Adios,
Bill M

Well, sort of.

$ per barrel is the only measure that will really stand up in the real world.
It doesn't matter if the TDP process
is 9% or 90% efficient in terms of BTU, what matters is the final cost of the
finished product in dollars per barrel or BTU or ccf. And that will be proven
or disproven by the plants already in service (the turkey plant in the Midwest)
and others in development.

It's a combination of temperature and pressure, plus water, that allegedly do the breakdown. Again, the devil is in the details.
>
>"Most men think that they think, but what they are actually doing is

>
>Get a grip folks! TANSTAAFL
>
>Posted by: dr mac at April 26, 2003 02:09 PM"

"dr mac" huh?

Maybe TDP works, maybe it doesn't, the obvious measure is given above. Of course if a company has 200 tons of turkey offal per day to dispose of, they're going to pay the TDP folks just to get rid of it. And if something useful can be made from for a competitive price, so much the better. Same for sewage sludge and old plastic, etc.

But even if TDP works as advertised, it's not the entire answer because it will take decades to bring enough plants online *and* there may not be enough suitable feedstock meet the demand. (imagine - not enough waste?)

25 or so years ago a ChemE friend of mine did her master's thesis on shale oil recovery. Developed a process that would get good-quality feedstock from oil shales of the type that are all over the Rockies. Worked quite well, and was clean to boot. Only problem was that the resulting oil would cost about $45/barrel to extract - and that was in 1980 dollars. Figure $60-80/barrel today.

I heard the Green party has something to say about all this. At any
rate, they aren't backing Ralph. His support this year is likely to be
down in the noise. Without a party backing him, he's just another Harold
Stassen.

If the cost continues at double digit increases every year, and the
graduate stands a pretty good chance of his/her entire field being made
redundant, the necessity of the education is going to go away. Granted
the would-be student is flippin burgers, but their job won't be made
irrelevant.

Makes me think of the "They Might be Giants" Sone "Minimum Wage"

> poor baby.

Poor old senile lennyboy, to senile and stupid to get a ham license so the best he can do is spend his twilight days in the nursing home here on the newsgroup attempting to degrade that which he is so jealouse he cannot be a part of. The amateur radio service has a long distinguished record of public service recongonized by many local, state, and federal government agencies. Something that just really torques your hemmoriods dosen't it lennyboy?

Only because it costs so much less to live there.

Way back in 1783, when the US Constitution was written here in
Philadelphia, one of the limitations placed on Congress was that there
would be no tariffs on *exports*. *Imports* could be tarriffed/taxed
at will - and they were! This was done both as a source of income and
to protect local industry from destructive foreign competition. It is
my understanding that we still have some forms of this in place, in
the form of such things as limits on the number of cars that may be
imported without special taxes. These import quotas caused several
carmakers (mostly Japanese) to build assembly plants here in the USA.
Some cars are even built here and shipped *back to Japan*, because by
doing so they count against the import number.

Maybe it's time for that sort of thing to be expanded. Exporting jobs
may be good for some companies' bottom line in the short run, but in
the long run it spells big trouble.

If expecting those who write here to back up their posts with facts, attribution to verifiable names, and/or citations from reputable sources is insane, then call me a nut. If I'm having fun exposing GOP FUD for what it is, then I'll keep laughing while the voters - you really _can't_ fool all the people all the time - send the junior Bush back to the farm.

Just remember that I didn't start it, have never pretended to be anything I wasn't, and have never started ad hominem attacks on those not in the limelight. Please feel free to come back and stand on the soapbox anytime you can support yourself with resonable and well-researched argument.

I'd say I support your right to do so, but I think that's already obvious.

Absolutely. In fact, Kerry, in a speech to the Council on Foreign Relations last October, stated that he would cease the war on terrorists, would negotiate with terrorist states, would APOLOGIZE for the actions of the United States so far, and would return terrorism to a "law enforcement issue" rather than the declaration of war it rightfully is.

This is the exact policy followed by the Clinton Administration, which led to the events of Sept. 11, 2001.

The safety of my family is far too important to risk ever voting for a demonstrable ignorant buffoon like Kerry. President Bush has taken exactly the correct path in fighting the war on terror.

That's one possibility. Another is bankruptcy and the resulting defaults on
student and other loans.

>> 1976, when I graduated? Is fininacial aid 10 times what it was in my time
>> there? Nope.

Add to this the fact that a kid who worked at minimum wage during the weekends, summer and holidays could make a sizable dent in that $3000/year tuition. If a kid could take home $1.50 an hour, and manage to put in 1000 hours per year, there's half the tuition. Today, if a kid can take home $5 an hour and put in the same 1000 hours, the resulting $5000 is only about 1/6 of the tuition.

That's just not right.

I'll make a tiny yagi. It will reach the next tower. That is, unless
the laws of physics has changed.

As Alun stated, hams don't need a tower, a tall tree,
> from the apex of the roof, just any support that will get the antenna up
> in the air and we are back on.

Riiight! Different law of physics again.

Not so with your cell phone, if the tower
> is down (dosen't even have to be physically down, just off the air) and
> your cell phone makes a good paper weight.

And when your ham radio goes off the air? Is it a good paper weight?

Thomas Jefferson said the only legitimate purpose of a federal
government was the protection of it's citizens.

That purpose has now changed to job creation and the department of
education.

> That does not negate the very necessary contribution that ham

Power went out north of here. Other than power, there were no reports of comms going out. Do you have a newspaper clipping detailing the comm outages?

Taking a page from Shrub, maybe? Bush wants all kinds of
"transparency" and "accountability" for everyone except the swells who
surround him. Try getting transcripts of Cheney's meetings with the
energy industry when our national enregy policy was being written.
That's at least as relevant to his fitness to govern as whatever went
on thirty years ago.

Agreed. The only solution to that appears to be more money in grant form
rather than loan form. At least it can be targeted at particular subjects,
like EE and Comp Sci for example.

Indians in India use English mostly to communicate with eachother, as they
have a proliferation of different languages. Just because they are fluent

doesn't necessarily mean it's English as you know it, or even as I know it.

That's true, and ironically that's probably due to the huge number of poor
people there. Basic food and services are likely to be provided to the
Indian middle classes by people who are far poorer than we can really
imagine.

The problem with that is that I don't think you can write off student loans
through bankruptcy. So, you may not get graduates going intentionally

bankrupt, but the inability to pay it off may lead more people into
bankruptcy. They may then still owe the loan, but it won't get paid back.

No argument there. Back home in the UK they used to give everyone grants.
They were means tested, and of course if your parents were middle income
you would be the poorest student in college. However, now they are phasing
out grants and bringing in loans. This is also a big mistake.

Our governments need to invest more in putting people through higher
education. It doesn't really matter whether they do it by giving money to
the colleges or to the students, provided the former results in lower fees,
but they need to do it. An educated workforce is the most important thing
they could be putting their money into.

I happened across this thread then read all the posts. Not much on radios
but I did use radio to kill communists during those years, 1967-1968.

> I was there, too: and everything John Kerry said is true.

I think the problem with Mr. Kerry is he testified he'd seen atrocities then
later admited he had not.

> That Mr. Bendell didn't see it doesn't mean it didn't happen: he is
entitled
> to support and protect the memory of his comrades, as am I - but not at
the

> things: just ask Rusty Calley if you don't believe me. Some of it, I saw
> with my own eyes, some I read in the courts-martial and/or arrest reports
I
> saw as a Military Policeman.

That Calley trial was a biggie but a biggie because his act was so rare.
Given the political climate after I got home, if there were other such
events they would have been jumped on by the press and Service. If you were
military police attending Courts Martial of people who did bad things that
is also a statement that soldiers were monitored and if they f'd up they
.were brought up on charges. The remains of people, men, women, children
horrendously murdered by the VC-NVA represent actions never addressed, and
they represent many MANY Mai Lais.

That was over for me on 5 May 1968, Hue, Dong Ha , Qua Viet, discharge
in San Francisco. Today, however, as a lifelong registered Democrat I will
not-can not vote for Kerry. I feel no trust. He represents a very left
highjacking of my party by '60s types who hate the Constitution, Bill of
Rights, fellow citizens, and America in general. Sorry, Kerry and his ilk
would not be good for our country or any other country'

The FCC tune has already changed. Read the article at:

http://www.arrl.org/news/stories/2004/03/09/1/?nc=1

Notice the FCC statement "...Powell responded to the question by saying
the FCC would not let BPL interfere with critical services."

Now the protection appears to have migrated to "critical" services only,
and the burden of proof is thus shifted to amateur radio to show how our
service is "critical" and worthy of protection against the
best-thing-since-sliced-bread BPL.

And they are about to lock up a goddamn housewife while these vultures
roam unimpeded...

Thus far, the name-calling has been initiated by WW. He has chosen to use the term "Shrub", so I suppose we are now free to degenerate to his level and refer to Mr. Kerry as The Curr. Further, anyone who disagrees with WW will be given the label of a "GOP PR type." Yes, WW seems quite adept and at ease wielding a smear technique

It's unfortunate that the Democratic machine has chosen to conduct the initial 2004 campaign by attacking the President's moral credentials. Desperation and hatred color and distort their entire position.

You are free to call John Kerry whatever you like: it's a free country,
after all. :-) I am free to call George Bush whatever I like, so long as
it's clear that I'm voicing my personal opinion. Both men are standing for
election to public office, and it's not a game for the faint-hearted.

I don't label "anyone who disagrees" with me: I used the "GOP PR" metaphor
as a sarcastic reply to an unattributed, and untracable, piece of
disinformation. If it wasn't clear to you that I was being sarcastic, then I
suggest you need to get out more: please recall that within 24 hours it had
gone from being the alleged report of a "Retired Rear Admiral" to being a
putative contribution by "Marine Master Sergeant" in a chat room, and I
think I was able to shoot _that_ nonsense down as well.

I don't, and haven't, smeared anyone: I've never lied and I never invented tall tales about George Bush, but if I call him by a nickname you don't like, well, as I said, it's not a game for the faint-hearted. I think he _is_ a Shrub compared to his father, and I think his father was a dwarf pine to begin with.

As I said, I don't attack those "not in the limelight". You, for example, are simply a ham operator with an opinion to share.

Me too.

How? In what way? _WHAT_ moral credentials?

Have at it. Bring it on. Stand up and be counted.

You have the right. ;-)

Bill

You're "imaginary", Lennie...?!?!

And since you've brought up what YOU consider to be
"contributions", would you be so kind as to tell us what YOUR
"contributions" to Amateur Radio are?

And what's "obvious to lay people", Lennie, is that you have no
vested interest in Amateur Radio, yet you seem to have your OWN
"obsessive" drive to harrass Amateurs, compounded with your inane
ramblings and bullying insistence on how we should be conducting our
business.

Now...please tell me why YOUR conduct is NOT "obsessive", "nuts"
or othrwise inappropriate...?!?!

And please remind us of how you're "...only here to civilly
debate the Morse Code test issue" by throwing around racial slurs,
demeaning endearments and profanity...?!?!

Thomas Jefferson, as enlightened and as forward looking as he may
have been, could have hardly envisioned the United States as it exists
today.

> > That does not negate the very necessary contribution that ham
> > radio made to a major emergency in a current situation.
>
> That does not negate the very necessary contribution that cellular
> telephones made to a major emergency in a current situation.

You keep trying to avoid the very real truth that Amateur Radio
STILL fills a need, even in these early days of the 21st century.

These facts are not from some ARRL source...these assertions come
from a plethora of govenmental, public and private agencies who have
benefitted from the contributions of Amateur Radio and have expressed
the intent to continue to include Amateur Radio in thier plans and
programs.

> > Phones and comms did go out in some areas here. Ham radio turned out to be

How about SITREP's from OES/EMA's detailing Amateur Radio
involvement?

Just becasue the papers don't name each and every resource
employed in an emergency doesn't mean they weren't involved. That's a
LennieRant tactic that any 3rd grader can see through.

Amateur Radio's contributions in emergencies does NOT exist
solely "when the comms are down".

The census of the United States as it pertains to cellphone
subscribers has nothing to do with the FACT that Amateur Radio
continues to be a vibrant, progressive and contributing resource to
this nation's ability to respond to emergencies of MANY kinds.

That is a fact.

> The history of all radio has already been and has been

> numerous as to be labeled "uncountable." The countable
> contributions - in the majority - all happened well before the
> gunnery nurse's life experience began.

OK, Lennie...

Since YOU seem to think the contributions of Amateur Radio are a
finite, "countable" figure, let's see YOU do it...!

> >> He's unable to do that, either, but he obviously believes that if

> >> re-write 90 years of history.
>
> Recounting documented reality is not a "rewrite" of anything.

YOUR "recounting" is contrary to numerous archived tellings,
Lennie.

That is directly due to your desire to see any reference to
Amateur Radio considered as insignificant or irrelevent for your own
satisfaction.

> ALL radio is only 108 years old. The ARRL was organized in 1914

> in both Italy and Russia in 1896.

I said nothing of the ARRL in my reference to the "ballpark"
figure of 90 years of Amateur Radio.

More than one historical reference on the matter makes that
number about the same.

I am sure YOU have so "exact" date when Amateur Radio as an
entity came to be...?!?!

And thank you for demonstrating your OWN rut of ARRL-bashing.

Hardly.

I simply use MY time to provide a balance to the lies, misrepresentations and Amateur Radio bashing that you seem leather-bent on lavishing upon this forum

YOUR time is wasted by not researching your facts, posting material and opinions that are easily refuted with even the most circumspect of effort, and your insistance on the liberal use of obviously inciteful, hurtful and demeaning epithets and profanities.

So...if your time is being wasted, it's you doing the wasting...not me.

Lennie..that is so...so...so...YOU!

Perhaps in some other life you'll be able to read your own posts
in this forum in an objective manner. Then, and only then, will you
gain an understanding as to why very few persons rally to your
"cause", and then those who do are the likes of Brain and Vippy.

Until then I won't hold my breath, as much as I am sure that
would please you.

"WE" being the "royal we" your "mentor" refers to. "We" being
everyone except your inner voice and Lennie)

As for how many "pesonalities" (at this point your "mentor" would
whoop-and-holler about how mad you were since you uttered a typo...),
coming from a guy who keeps changing his screen names, I'd rethink
making such a silly insinuation...

Go read this, it even gives the Marine Master Sargent's name, you can
call him and verify it yourself.

Maybe Kerry is going to get Jane Fonda to run on the ticket with him,
and appoint Barbra Streisand, Whoopei Goldberg, Martin Sheen, and Rosie
O'Donald to the White House advisory staff. You know, those folks that
said they would leave the country if Bush were elected.

> Correction, Marine Major.

You post implies that you have confirmed the authenticity of what was
originally posted here, and that's not the case: the material at that URL is
an opinion piece by a commentator, who quotes nine sentences from the former
Major Stolz, none of which appeared in the original post or the followup
that I responded to. I stand by my opinion concerning my previous messages:
that there never was any such thing published in a chat room, by a "Retired
Rear Admiral", a "Master Sergeant", or anyone else who was ever in a
possition to know didly about the 'nam. It's GOP FUD, plain and simple.

As to _this_ publication: it's author, Thomas D. Seigal, says at the start
of the second paragraph that

"I would argue that anyone who experienced shots fired in
anger has the right to ask questions about any other person
who makes similar claims. "

... but he does not provide any information as to whether he or the two officers he quoted were ever in Vietnam or even in combat : in its absence, I assume they were not.

Let's leave that aside, though: there is a larger issue, and it is getting swamped (no doubt as the spindoctors at the RNC planned), in minutiae about whether John Kerry acted wisely in conducting operations during close-order combat. I submit that it is unimportant whether Kerry "should" have gotten off his boat or whether he "should" have acted differently under fire.

Senator Kerry was a commander of a combat crew that was regularly involved in life or death struggles with hardened, experienced Viet Minh cadres, at the same time that the current President was evading even the minimal obligations to the Texas Air National Guard which his father had arranged for him.

There's a phrase that's used a lot in substance-abuse counseling: "Don't should on yourself". I don't care what Kerry "should" have done: he was there, and Shrub wasn't.

Bill Warren

P.S. This really has gotten too far off the subject of ham radio. I've set the followups to talk.politics.

(My email address has an anti-spam meassure you must remove for direct replies)

I accept that. However, what I find amusing is that you and Dee
cannot accept that other forms of communications are fast eclipsing
amateur radio as a means of portable emergency communications.

> These facts are not from some ARRL source...these assertions come
> from a plethora of govenmental, public and private agencies who have

> LennieRant tactic that any 3rd grader can see through.

And you're entirely up to the task. Congrats?

Did you say that cell phones played no role in providing
communications during the east coast power outage?

Did you say that cell sites don't have emergency backup generators?

C'mon, third grader, explain cell phones from of the picture. Tell us
that cell phones played NO role?

> Amateur Radio's contributions in emergencies does NOT exist
> solely "when the comms are down".

C'mon, third grader, show us where I stated that.

You and Dee simply cannot accept that an unlicensed service has played
a major role in emergency comms.

Were you two colleagues in third grade???

WHOA!
it doesn't matter that you don't have a license. you are still compliant with part 95 (and thus, deserving of any protections therein). the Utility company there must adhere to part 15 (as their devices fall under those regulations) and they have NO RIGHTS to deny you your services because of that.

instead of spending money to defend yourself, get hold of someone in the local ham radio clubs (sure, you may not be a ham, but someone there should be able to help in any case). in fact, go out, take your tech no-code test, get a license for part 97 spectrum and then tell the utilitiy company to go pound sand (if they choose to sue you at that point, they will lose and all it will cost you is a little time, $10-$15 for the license fee and perhaps the book "now your talking"). Believe me, you go this way and they'll have no choice but to lay off.

We haven't had anything like this in Arizona yet. We (as hams) work fairly closely with the local utilities and, frankly, they look at BPL as a dead end technology out here.

On a last note, don't take your station down. You use it to talk to friends and in times of disaster, it can be pressed into service to pass helth and welfare traffic (emergency services duty). there are a fair number of groups nationwide that do this on CB (REACT). We even have on here in Phoenix. A lot of times, hams will appreciate ANY assistance they can get to pass the traffic along (even if its on an unlicensed spectrum such as 11 meter). I am one such, having come up to ham from CB in 1992. I got out of CB though for other reasons (trash mouths, stalking and the

other bullshit nonsense that went on). If I had the equipment here, I'd probably do a lot more listening than transmitting.

BTW, I voluteer time with the red cross, the Maricopa County Emergency Services group and a few others. I am fairly busy during large chunks of the year doing public service duty. I live in a place that has an HA (and they have told me to take down my antennas on more than one occasion only to be told to pound sand as their bylaws don't prohibit such antennas and nearly everyone here has an antenna of some kind on their roofs in full view of the public areas). That HA has since gone out of business here (4 years ago) and I have gotten no complaints from the neighbors at all (in fact, a few of them became hams and at least one is still on CB, but with some help, has cleaned up his station to the point where I can't even hear him on 10 meters anymore).

Point is, you don't have to lose your station because some utility company says you do. until they actually subpeona you into court, all their threat are: HOT AIR!

DE N7ZZT

So....AES is now doing the old "restocking fee" scam eh?
What a load of BULL SHI+. They really *love* their customers. : (

Re-stocking involves nothing more than inspecting the
item, issuing a diffrential credit if applicable and punching
a few keys on the computer inventory database and
putting it back on the shelf for sale - albeit "slightly used".

But 15%? I could understand a 5% fee!
Guess I'll make that next purchase at HRO instead.

I also seem to recall, during a visit to AES 15 years ago,
them pulling another clever 'scam' during Icom or Yaesu day.
Midway thru the day they got on the PA and announced
that the "..prices were going up tomorrow" because of
the **currency exchange differential** between the Dollar
and the Yen (!!!)

Needless to say I ain't been back to any AES since
and wouldn't give them 1 red cent of my business after that
crass display of high-pressure marketing BS, that even the
used car dealers (the skunks that car dealers are) even wouldn't
have the balls to try and pull off....

You are just the kind of sheep that big business loves. BPL as it stands is a BAD idea. The interference potential isn't just to amateur radio but a host of other services.

Still, the effective result was that almost any kid who was smart enough to get
in could go to college and get a degree. The rich ones paid their way and the
rest got various forms of help but did not have to start out their professional

lives way in debt.

>However, now they are phasing
>out grants and bringing in loans. This is also a big mistake.

Actually, I think loans make sense *IF* they are reasonable and the job situation is such that they can be paid back in a short period of time.

The big question nobody wants to answer is "why does a year of college cost so much?"

Here in Radnor Township, we spend a bit over $10,000 per year per student in the public schools. And that's one of the highest outlays in the commonwealth of Pennsylvania, if not the whole country. Why should a year of college tuition cost more than that? The college school day and school year are shorter, the classes bigger, and the college students pretty much provide their own supplies and/or pay lab fees. College students also usually provide their own transportation, don't need special ed services, etc.

So why does college cost so much?

>Our governments need to invest more in putting people through higher
>education. It doesn't really matter whether they do it by giving money to
>the colleges or to the students, provided the former results in lower fees,
>but they need to do it. An educated workforce is the most important thing
>they could be putting their money into.

I agree 100%. It's an investment in the future.

Public education (meaning universally-available, publicly funded education) was recognized as a necessary function of government from the very beginning of this country. Nowadays that means either college or some form of post-high-school specialized training.

Money well spent.

Also these exams select from the question pool at random so you need to study the entire pool (or the material from which the pool is developed). So you are unlikely to get the particular group of questions that you see on any particular practice exam.

I have never refused to accept the role of unlicensed services but I do not let that blind me to the fact that amateur radio continues to play a significant role. You are the one who cannot accept the fact that amateur radio continues to play a major rule in emergency comms. My position is and has always been that we need as many different forms of communication as possible. No one can predict what services will or will not be knocked out in the next emergency.

Amateur radio is a hobby, yes -- but it is a hobby that also provides
training for services to the public. E.g., search and rescue operations
(e.g., much of the shuttle debris was in areas with no cell-phone or
regular two-way radio service), emergency communications when major
power outages occur, etc., etc.

Well, guess you are not a US Radio Amateur, or you would
know that Amateur Radio is not a hobby, but is a service.

If you ARE a ham and live in the US, please go read Part 97 again.

I'm glad to see that someone mentioned that the online ones are PRACTICE exams.
You still have to take the exam that counts in person at a test session to
actually get a license.

A couple of points, Lennie...

First of all, I have never said EVERYTHING you write is a lie or
distortion.

I HAVE publically stated in this forum that I acknowledge that
you know far more about the inner workings of the box than I do. When
YOU respond in a fraternal, respectful manner I ahve done the same
(ie: a couple years ago when I asked about plastic model
sources...Your INITIAL response was polite, precise and appreciated)

What I ALSO have said is that you lie and mislead people about
the character of the AMATEUR RADIO SERVICE, that you find it necessary
to use demeaning and belittling endearments in order to place yourself
above everyone else, and that your purpose in doing so is for mere
spite, nothing else. (ie: your SECOND response to the above referenced
item wherein you made a 180 deg turnabout and resumed your typical
snide manner)

That you started off on a purely fraternal offer of information
for another radio hobbyist was appreciated.

That you finsihed off in your usual spiteful slashing was
typical. At elast this time you did it all in one post...

Thanks for once again proving me correct.

Steve, K4YZ

PS...Thanks for the tip, Len.

> possible. No one can predict what services will or will not be knocked out
> in the next emergency.

Actually, Dee, his "unlicensed services" frame is awfully narrow.
Only Class D CB, MURS and FRS are "unlicensed".

Cellphones are NOT a "radio service" as defined by any FCC
part...they are a FEE-FOR-SERVICE provided by common carriers who are,
indeed, licensed services providing that fee-for-service. Every one
of those carriers has a plethora of callsigns issued for thier
services. You,a cellphone "subscriber" are using your telephone under
the auspices of thier license.

There are some REACT groups remaining who continue to monitor
Class D CB to some degree, but most REACT groups participating in
organized "public service" events use GMRS which still requires an
FCC-issued station license.

FRS is used mostly as a "wireless intercom" within disaster
shelters or extremely close areas, NOT as a "major role" in providing
disaster relief communications.

And I am sure that MURS radios may be used in some areas just as
FRS is, but for no more than FRS is.

Brain's assertion that "unlicensed" services play a "major role"
in "emergency comms" is absolutely assinine. He'll wallow around in
this one for a long time to come trying to justify his claims and will
come out of it looking just as foolish as he has for his other
"claims".

I am sure his "definition" of "major role" is far from what REAL
IC's consider a "major role". The "unlicensed services" play no more
than a "bit part"...a "cameo" at best.

So Brain...what "major role" do "unlicensed services" play...?!?!

>

True.

I'm not sure whether those couple of IFs hold true in the UK as I'm not there. An engineer's starting salary over there would not have been enough to pay back a loan when I graduated (it was barely enough to live on), but I think things have improved since then.

As for the US, the problem is more the size of the fees rather than the size of the paychecks. That and finding a job.

WHOA, BillyB! You at once espouse making Amateur Radio a
"once-size-fits-all" radio service, then make reference to a "welfare
state"...?!?!

Nice turn-about there! Get whiplash making that turn...?!?!

> > You keep trying to avoid the very real truth that Amateur Radio
> > STILL fills a need, even in these early days of the 21st century.
>
> I accept that. However, what I find amusing is that you and Dee
> cannot accept that other forms of communications are fast eclipsing
> amateur radio as a means of portable emergency communications.

I have NEVER, in this forum or any other, refused to acknowledged
that other radio, wireline, or other common carrier services provide
any other means of "portable emergency communications".

I challenge you to prove otherwise.

What I HAVE stated in this and other forums is that Amateur Radio
CONTINUES to provide a necessary and almost irreplaceable asset. NO
OTHER RADIO SERVICE provides the flexibility and utility that Amateur
Radio does.

I challenge you to prove THAT otherwise, also.

> > These facts are not from some ARRL source...these assertions come

>
> And cell phones.

How well does a cellphone operate without a functioning cellsite,
Brain?

Please DISPROVE >>ANYTHING<< I have said about Amateur Radio's
role.

I have NEVER said anything even CLOSE to the idea that we're the
only game in town. Quite the contrary.

I >>HAVE<< said we provide a service to those who make the plans
and need the help.

> > > > Phones and comms did go out in some areas here. Ham radio turned out to be

>
> Did you say that cell phones played no role in providing
> communications during the east coast power outage?

Absolutely not. You'll please quote the post wherein I made such
an assertion, Brain...?!?!

> Did you say that cell sites don't have emergency backup generators?

Absolutely not. You'll please quote the post wherein I made such
an assertion, Brain...?!?!

> C'mon, third grader, explain cell phones from of the picture. Tell us
> that cell phones played NO role?

WHERE do you GET such assinine insinuations, Brain...?!?!

I have NEVER made ANY SUCH ASSERTION!

> > Amateur Radio's contributions in emergencies does NOT exist
> > solely "when the comms are down".
>
> C'mon, third grader, show us where I stated that.

From above:

> > > Power went out north of here. Other than power, there were no reports
> > > of comms going out. Do you have a newspaper clipping detailing the
> > > comm outages?

The INSINUATION you make here is VERY clear...in YOUR estimation,
the "comms" had to be "down" in order for Amateur Radio to have played
a role in "emergency comms".

"Emergency comms" are NOT >>only<< when the wires are down or the
cell site destroyed, Brain.

Perhaps if you were actively involved in the programs of some
disaster mitigation agency you might have a better insight as to what
Amateur Radio's OTHER roles are...?!?!

> You and Dee simply cannot accept that an unlicensed service has played
> a major role in emergency comms.

What "unlicensed service"...?!?! CB? FRS? MURS? Part 15
compliant devices?

Cellphones are a "fee-for-service" provided by the common
carriers under the auspices of THIER licenses.

> Were you two colleagues in third grade???

Perhaps.. I knew a "Dee" in gradeschool, however I doubt we were
classmates.

On the otherhand we both seem to acknowledge that Amateur Radio
plays a PART in emergency communications, and that PART is
acknowledged and incorporated by almost every major disaster
mitigation organization in the United States, including FEMA, The Red
Cross, The Salvation Army, the Department of Defense, the Department
of State, most state's OES's, etc etc etc.

Unless, of course, you have evidence to the contrary...?!?!

>imagine.

That's true but there are other factors to consider: the budget deficit, the
trade deficit and the strong dollar.

The figures for the January trade deficit came out recently. The highest in US
history, something like 46 billion in one month. Much of that is with East
Asian countires like China, Japan, and maybe India. But particularly China.

Imports are inexpensive in part because these countries keep their currencies
low relative to the dollar. Because of the trade deficit, lots of dollars wind
up there, but they don't use those dollars to buy US products. Instead, they
buy US investments - both government securities and private-sector companies.

IOW we export money and jobs, and they use the money to finance our debt and buy up the USA a little at a time.

>> Way back in 1783, when the US Constitution was written here in

I too think that multiple forms of communications are the best bet
when the chips are down.

But cell phones sure are playing a much larger role than amateur radio
in emergency communications.

>
>I don't know. It's a puzzle. I don't think it's big salaries.

Some years back the local paper did a series of stories on my alma mater and the tuition explosion. Two things were obvious cost-increasers: big jump in the number and ratio of nonteaching administrators, and a building boom.

Still, the local school district built a new elementary school a few years ago without breaking the bank. We're not top-heavy with administration by any means, either.

I would think that primary and secondary education are actually more complex and costly than college, for a number of factors ranging from classroom hours to diversity of student needs.

>>>Our governments need to invest more in putting people through higher

Yes and no:

from

http://www.mdbankruptcylaw.com/lawguide/studentloans/when_you_cant_pay.asp

Another possible solution is to discharge your student loan in
bankruptcy. However, due to a 1998 change in the bankruptcy law, this is
harder than ever to do. In general, you can discharge a student loan in
bankruptcy only if you can prove that repaying the loan would be a
severe hardship for you. There are several factors that courts consider
in making this determination, but suffice it to say, it's a very
difficult standard to meet.

At one time, many students simply completed their education, and as a
matter of course, declared bankruptcy and wiped out their debts (HA!
America's best and brightest, eh?) After it caught on that they were
doing this, the law was changed.

So a person that declares bankruptcy has to continue repayment unless
they can prove they simply can't pay. And that isn't all that likely to
happen.

How do you know? Ever work at a race? I have, in a variety of roles.
LA and other major marathons have been using amateur radio operators
for race communications for years.

See:

http://www.lamarathon.com/2004/volunteers.php

http://www.doitsports.com/volunteer/info.tcl?job_id=488

(sign up for radio operators - only licensed hams need apply)

http://www.cert-la.com/

(scroll down a bit to where it says "ham radio operators wanted")

"ARRL copy scribblers"? Who are they? You mean folks who write the
facts about what actually happened?

http://www.arrl.org/news/features/2002/02/28/1/?nc=1

Nice write up about the 2002 LA Marathon

Maybe you didn't see the hams, so you just assume they are not there
and play no role. That's simply Not True.

A local bike race decided to try using cell phones as an experiment last
year. The hams were along, with the knowledge that we might be
"redundant in the future. They found out:

Every person had to be called separately. When a message had to go to
the whole group, everyone had to be called.

Those who were out of coverage range did not get the messages.

Coverage over the entire course was pretty bad.

Using cell phones was an immediate and complete failure. they realized
this on the first call that had to go to everyone.

Cell phones work for some things, but the idea that they can replace
radio operators is best advanced by those that don't really know how
that particular job is done.

> http://www.lamarathon.com/2004/volunteers.php

Some hams and ham equipment spotted in the pix.

> (scroll down a bit to where it says "ham radio operators wanted")

Do you think maybe they put that in as an affirmative action sort of
thing? Maybe they just wanted to get the Hams to shut their yap's? ;^)

Capitalization noted, Jim. Do some people think that the hams are
suppose to be in the lead vehicle or leading the parade? Heck they are
supposed to be behind the scenes. Go figure.

1. By reading about it in a respected newspaper.

2. By viewing it on broadcast television.

3. By knowing some details about it from one of its officials.

> Ever work at a race?

Not in a foot race.

Why is that important to the "Economy, Stupid?"

>LA and other major marathons have been using amateur radio operators
>for race communications for years.

If you insist...and you WILL insist. You are a Believer.

Have you ever been IN Los Angeles?

Have you ever worked IN any volunteer function here?

YOU have NO relationship with the city of Los Angeles. I live here. You don't.

Reality check: ANY marathon foot race can be done with available non-amateur radio communications readily available in any large urban area. The first Olympic marathon event was done without any amateur radio "help." Several Games after that had NO amateur radio "help" and also succeeded.

>Maybe you didn't see the hams, so you just assume they are not there
>and play no role. That's simply Not True.

I don't care one way or another about "ham radio help in marathons."

I know a marathon can be run WITHOUT amateur radio help. That's been done many times.

You keep insisting amateur radio MUST be there...and that's simply Not True.

Now go do some DX or gab expertly about The Economy, Kosher Food, or choo-choo trains. Don't they need "ham radio help?"

Profit is defined as pecuniary compensation for services rendered.

U.S. amateur radio is defined as specifically NOT for pecuniary interest.

Try to stay focussed.

>distortion.

YES you have. Plus a LOT more in the form of excessive personal
insults of many kinds.

> I HAVE publically stated in this forum that I acknowledge that
>you know far more about the inner workings of the box than I do.

You have NEVER said anything in public about "my having far more
(knowledge) about the inner workings of the (FM2015R) box."

NEVER.

If the "FM2015R" is an amateur radio, then, by YOUR own rules in
here, I cannot possibly know anything about it because I have "zero"
experience in amateur radio.

Your "definition" is multiply faulty. I have learned many many things
about radio and have applied them in all disciplines of such radio.
All radios work by the SAME physics regardless of any human

legislation or advertising/marketing or membership organizations say.

>When
>YOU respond in a fraternal, respectful manner I ahve done the same
>(ie: a couple years ago when I asked about plastic model
>sources...Your INITIAL response was polite, precise and appreciated)

I am NOT a "member of any fraternity."

Mentions in public of other sources in this newsgroup is done for the BENEFIT of all, not for any 'fraternalism.' All public access newsgroups are readable by all and are NOT one-on-one private correspondance.

But, YOU cannot ever remain "in phase" with what you say and MUST vent your rage against another you personally dislike. That is exemplified by the following -

> What I ALSO have said is that you lie and mislead people about
>the character of the AMATEUR RADIO SERVICE, that you find it necessary
>to use demeaning and belittling endearments in order to place yourself
>above everyone else, and that your purpose in doing so is for mere
>spite, nothing else. (ie: your SECOND response to the above referenced
>item wherein you made a 180 deg turnabout and resumed your typical
>snide manner)

Tsk, tsk, tsk. You have been taken to task for demonstrating an unusual personal mythos about amateur radio that is not real. That has already been explained to you. You refuse to accept it...and must continue to dwell on your peculiar personal outrage and disagreements...which you did as shown.

You inadvertently LIE in stating I say "bad things" about the Amateur Radio Service. I do NOT. I state up front that I say bad things about INDIVIDUALS who have amateur radio licenses, because they do so.

YOU do NOT represent ALL of U.S. amateur radio. Ergo, you cannot transpose your personality to that of ALL U.S. radio amateurs. (they would feel or should feel insulted by such a gross misrepresentation)

YOU cannot seem to accept the slightest correction or rebuke or even difference of opinion to your own personal opinions with any sort of civility. YOU can't handle the truth and typify the "Colonel Jessups" of your imaginary "service" world.*

> That you started off on a purely fraternal offer of information
>for another radio hobbyist was appreciated.

YOU have repeatedly claimed that I am not allied in any way with U.S. amateur radio. Now you claim "fraternal offers." A LIE of a LIE by yourself. [how hypocritical can 'done peyote...' be?]

The "W7FG Manuals" service is an old one and links to the business are made on many websites of interest to hams as well as hobbyists.

There are many businesses involved in supplying service manuals
for electronic equipment, easily found by a simple Search function
available at all major ISPs. I suggest a review of the functions
available to AOL users as a benefit to your own education for
Internet operations.

> That you finsihed off in your usual spiteful slashing was
>typical. At elast this time you did it all in one post...

There is NO "elast" in or about time. TRY to control rage and anger
when typing. Clean copy is a positive attribute in communications.

>PS...Thanks for the tip, Len.

WHAT "tip?" W7FG has been supplying manuals for a long time.

I never looked to see if your particular part number was available
there. I just pulled down a copy of an H-P 606A signal generator
manual that I obtained from there two years ago. The business
name (using an amateur radio callsign, a grey area in "non-
pecuniary" definition of amateur radio in a business name) is
printed predominently on its cover.

Did you go to the www.w7fg.com site to check for yourself? Or
didn't you just shoot off your keyboard in personal rage and anger
about imaginary slights against your attitudes and opinions in
long-ago discussions now defunct?

Why are you always so angry and rage-filled, wanting to fight all
the time? Have you seen an analyst or therapist to cure that
aggressive, uncivil behavior?

Try getting on the list for the first copy of "Ham Radio for Dummies"
that is rumored to arrive in April. Get one. You may learn
something about the insides of radio and electronics boxes and
become productive in your amateur community.

Keep up that good work on the morse code and making sure that
all U.S. prospective radio amateurs MUST take that code test
forever and ever. Morse code can be "a significant factor" in
emergencies and "play a major role" there as the League blabs.

LHA / WMD

* "Colonel Jessup" is the character in the film "A Few Good Men"
and protrayed convincingly by actor Jack Nicholson. The
character of Colonel Jessup was removed from the military court
in arrest at the end of the film after the character lost his cool
arrogance. "You can't handle the truth!" is Colonel Jessups'
now-famous line that reveals his arrogance and imaginary beliefs
about those not in the USMC.

It's one possibility...and no one need worry Cervantes fans with that.

Given the royal "we" he insists on used, there may be another
personality. Rather than borrow from Cervantes and use "Sancho
Panza" I think that this other personality is more like Pancho Villa.

That fits the widely exhibited rage and anger demonstrated in posts
by him. Unfortunately, Pancho Villa didn't succeed in real life. :-)

Your postings are, and have been evidenciary of consistent rage and anger against anyone who disagrees with you.

> What >>I<< have stated is that said mistakes are "rage" as
>defined by "your mentor", that being Lennie.

Everyone can see the actual rage in hundreds of postings.

Such rage is only intensified by someone pointing out what already exists.

> It is NOT my assertion that it is such. Ask around, Brain...YOUR
>attribution is WRONG.

Not at all. It is correct and to the point.

Refusal to acknowledge what everyone else can see is only denial on your part.

>
> I have zero. So what's YOUR problem...?!?!

Did "K4CAP" exist four years ago? :-)

Did the long, libelous fictious screen name you tried to use on AOL
to put an even more gross libelous distortion of one individual in an
AOL home page? It only existed for three days but some saw it.
AOL member services wiped that home page clean and took away
your new, extra screen name.

Others, particularly AOL members, can find out that there are
several screen names under your single account.

So, you've tried to bluff through another very wrong statement. You
will not acknowledge that those screen names exist and your only
comeback will be misdirections into more personal insults.

>> I'd rethink
>> > making such a silly insinuation...
>>

>
> OK, Brain...if you insist. As long as it makes you feel warm and
>fuzzy to hold on to it.

Reality isn't making warm and fuzzy. Reality can be harsh, cruel.

Stay in your little imaginary world where you are safe, even if nuts.

You need to relax. Go away from the Internet and play with your
radios. The Internet is full of those who have and can put you down.

Define "significant role."

That's an emotionally-loaded indefinite adjective designed to state an opinion rather than any quanitifed value. It is very useful to membership organizations in trying to get new members by appeals to their personal need for recognition.

>You are the one who cannot accept the fact that amateur
>radio continues to play a major rule in emergency comms.

Such as...?

Define "major role" by general terms of reference, NOT from the League's point of view.

Go to any newspaper or broadcasting archive and research the above assertation before stating it again (incorrectly).

Amateur radio COULD play a major role and it MIGHT do so at some future time. It just hasn't done so in the mass media.

>My position is and
>has always been that we need as many different forms of communication as
>possible.

That is very true.

That has also been used as a rationale to continue morse code testing for U.S. radio amateurs. According to the tRoll yodelings in here, morse code has been the base rock, the cornerstone of his imaginary world of "emergencies."

>No one can predict what services will or will not be knocked out
>in the next emergency.

That INCLUDES amateur radio.

Try to remember that last sentence in FULL reality.

>But cell phones sure are playing a much larger role than amateur radio
>in emergency communications.

Brian, reminding folks that 100 MILLION cell phone subscriptions
have been taken out in the USA is not a valid fact to Believers.

Believers - those whose only access amateur radio sites and
especially that of the League - cannot rid themselves of the
urban myth that "cell phones always fail in an emergency."

Believers don't believe that any other "radios" except cell phones
and amateur radio exist. They don't believe that Public Safety
(police, fire, ambulance, etc.) services ever use their radios in
emergencies...the "emergency" in their minds seems to be of
such a large scale, so devastating that Public Safety agencies
are also "down." They don't believe that there are hundreds of
thousands of other radios in utility companies, taxicabs, private
corporations, private boats, private and commercial aviation can
even be used in any emergencies. Believers don't believe that
any government agency such as FEMA can use "radio" or
acknowledge that such is ever used in any emergency. Believers
don't even bother to consider the U.S. military or the various states'

National Guards, all of whom have portable or mobile radios, radios designed for survivability and operability in the very harsh environment of warfare.

Believers only believe in three kinds of radios - amateur, cell phones, and some vague amorphous 'other kind' not specified because they don't know anything about all those 'other kinds.' Believers only believe that "cell phones always go down in emergencies" but amateur radio is always so robust and damage proof that all of them survive and continue to work.

Believers believe what they are told by the League who seems to always say that "amateur radio was 'significant' in some emergency (or event of occasion)."* The League doesn't define 'significant' since that would take away the emotional loading that makes all League members and other amateurs very proud, warm, and fuzzy...which is what they want to do to increase interest in joining the League to keep getting proud, warm, fuzzy feelings through membership.

* the homonymic phrase "played a major role" is sometimes used for similar effect. Also, NASA astronauts who accept getting a ham license as one of the many tasks of having to do required NASA public relations are always labeled as "ham-astronauts" to get folks proud, warm, and fuzzy thinking that they got to be astronauts through their amateur radio license first.

All throughout Title 47, Code of Federal Regulations, the word "service" is used as a regulatory term meaning a type and kind of radio activity being regulated. Believers insist that "service" means the same as "a service to the country." They don't acknowledge that amateur radio is basically an avocational pursuit, a hobby, done without pecuniary compensation to enjoy a particular radio activity. No, Believers insist that "they perform a service to the nation" through having a ham hobby, much in the same way the we both served our country in the military.

Believers cannot be convinced of reality. Believers are a cult stuck in an imaginary world reinforced by the many words of membership organizations into mythical proportions. Anything said to disturb their pride and warm, fuzzy feelings about their hobby are considered heretical and damnations of their national service.

>know that Amateur Radio is not a hobby, but is a service.

I hazard a guess that YOU are misinformed.

All throughout Title 47, C.F.R., the word "service" is a regulatory term
denoting a type and kind of radio activity being regulated.

It is NOT a "service" the same a military service, a jury service, or a
service for eight used in dining.

>If you ARE a ham and live in the US, please go read Part 97 again.

It is not necessary to be licensed as a radio amateur to read
Part 97 of Title 47 C.F.R. All the Parts of Title 47 are adminstered
by a Commission and staff, none of whom need to be licensed in
ANY radio service.

You sure seemed to be doing a good job of it above. Thanks for coming
clean and acknowledging that cellular telephones have played a huge
role in emergency response communications.

> What I HAVE stated in this and other forums is that Amateur Radio
> CONTINUES to provide a necessary and almost irreplaceable asset.

To the exclusion of all other communications means. At least until
you posted the above.

NO
> OTHER RADIO SERVICE provides the flexibility and utility that Amateur
> Radio does.

You're simply wrong on that one. Amateur radio does not offer the
flexibility and utility that cellular telephones provide.

> I challenge you to prove THAT otherwise, also.

Challenges, challenges, challenges! That's a part of your problem,
Don Quixoterobeson. Always making challenges.

You omit any discussion that any other radio service or common carrier
can provide emergency comms. That is a form of lying.

> I >>HAVE<< said we provide a service to those who make the plans
> and need the help.

Until the emergency happens, you don't know who your customer might be
or if you can provide a service to him or her.

Unless your emergencies are always predictable, in which case they are
not emergencies.

JJ thinks they are. My cell site is always down, his ham radio is
always up. That is the picture he paints.

> Perhaps if you were actively involved in the programs of some
> disaster mitigation agency you might have a better insight as to what
> Amateur Radio's OTHER roles are...?!?!

I was a MARS volunteer and BST member. I have no problem with that
concept. But there sure are a lot of DP planners running around with
cellular telephones nowadays.

And the first time I saw that theory it was -you- who had presented
it, without attributing the author/originator.

Now you are saying that you simply stole it and presented it as your
own material?

> What >>I<< have stated is that said mistakes are "rage" as
> defined by "your mentor", that being Lennie.

Nice backtracking. When you "used" Len's material, you gave no
attribution. You presented it as if it were your own idea.

> It is NOT my assertion that it is such. Ask around, Brain...YOUR
> attribution is WRONG.

Your lack of attribution is wrong.

He ended up "declining" to take the position. Probably a smart move.

Grit? USA Today, the newspaper for those who haven't the time for CNN's
in-depth coverage?

> 2. By viewing it on broadcast television.

You strike me as the kind of guy who has time for lots of things, like
watching an entire marathon in order to see if amateur radio is involved
or like making numerous lengthy posts to an internet newsgroup which
deals with an activity in which you are not a participant.

> 3. By knowing some details about it from one of its officials.

One official. Some details. Yep, that makes you an expert on the L.A.
Marathon.

> > Ever work at a race?
>
> Not in a foot race.

Political race?

> Why is that important to the "Economy, Stupid?"

Allow me to jog your memory. Jim responded to your comments. How did

> >LA and other major marathons have been using amateur radio operators
> >for race communications for years.
>
> If you insist...and you WILL insist. You are a Believer.

He didn't insist. He provided you with a way to check out details.

> Have you ever been IN Los Angeles?

Have you ever been in Bissau?

> Have you ever worked IN any volunteer function here?

Did you ever worked in any capacity in Bissau?

> YOU have NO relationship with the city of Los Angeles. I live here.
> You don't.

YOU must BE an EXPERT. YOU live THERE so YOU must KNOW everything which
goes on THERE.

> Reality check: ANY marathon foot race can be done with available
> non-amateur radio communications readily available in any large
> urban area. The first Olympic marathon event was done without any
> amateur radio "help." Several Games after that had NO amateur
> radio "help" and also succeeded.

That's nice. You were provided links to information which seems to
disprove your earlier statements. Your "first Olympic marathon" tap
dance isn't going to get you on "American Idol".

> >Maybe you didn't see the hams, so you just assume they are not there
> >and play no role. That's simply Not True.
>
> I don't care one way or another about "ham radio help in marathons."

That's odd. You certainly seemed to care when you decided to take
another shot at amateur radio by bringing up the topic.

> I know a marathon can be run WITHOUT amateur radio help. That's
> been done many times.

A marathon. You brought up the Los Angeles Marathon. Run without
amateur radio help? Those links provided by Jim seem to disprove your
claims, kindly old gent.

> You keep insisting amateur radio MUST be there...and that's simply
> Not True.

What's not true is that amateur radio wasn't there. Look at the links.

> Now go do some DX or gab expertly about The Economy, Kosher
> Food, or choo-choo trains. Don't they need "ham radio help?"

No, I have not.

You'd better re-think that, since Google is at EVERYONE'S
disposal.

Do you REALLY want me to go pull up an example and PROVE YOU
WRONG AGAIN?

> > I HAVE publically stated in this forum that I acknowledge that
> >you know far more about the inner workings of the box than I do.
>
> You have NEVER said anything in public about "my having far more
> (knowledge) about the inner workings of the (FM2015R) box."

YES, I have, although not SPECIFICALLY about the FM2015R...

I have SPECIFICALLY stated that I acknowledge that your superior
knowledge of the inner workings of "the box" (refering to electronic
devices generically) on SEVERAL occassions.

Again, if you put me to the task of wading through all thos
Google archives to once again prove you WRONG, I will, but then I will
have bragging rights on you for the next decade.

> NEVER.

Never say never, Pumpkin...cuz if you DO, it WILL come back to
HAUNT YOU!

> If the "FM2015R" is an amateur radio, then, by YOUR own rules in
> here, I cannot possibly know anything about it because I have "zero"
> experience in amateur radio.

The FM2015R is an elctronic device designed to be used primarily
by licensed Radio Amateurs.

> must continue to dwell on your peculiar personal outrage and
> disagreements...which you did as shown.

Lennie, there is nothing about Amateur Radio in any aspect of
which I participate that is "not real".

You have TRIED to "explain" your OPINION on Amateur Radio, but in
as much as you have NO practical experience from which to substantiate

your comments, you usually falter in facts!

> You inadvertently LIE in stating I say "bad things" about the Amateur
> Radio Service. I do NOT. I state up front that I say bad things about
> INDIVIDUALS who have amateur radio licenses, because they do so.

I have not lied, inadvertently or otherwise.

Furthermore YOUR above statement is in-and-of-itself untrue.

You BLATANTLY stated the American Radio Relay League is
dishonest. When tasked with providing something OTHER than your
opinion, you have failed to do so.

No evidence = Obvious lie.

> YOU do NOT represent ALL of U.S. amateur radio. Ergo, you cannot
> transpose your personality to that of ALL U.S. radio amateurs. (they
> would feel or should feel insulted by such a gross misrepresentation)

opinions when it comes to YOUR honesty, integrity and character.

> YOU cannot seem to accept the slightest correction or rebuke or
> even difference of opinion to your own personal opinions with any
> sort of civility. YOU can't handle the truth and typify the "Colonel
> Jessups" of your imaginary "service" world.*

I accept lots of "corrections"...Especially when it's brought to
my attention in the same fashion that the bearer would like to
beaddressed if the shoe were on the other foot.

And it's not YOUR place to "rebuke" anyone in this forum. You
don't have the experience in Amateur practice from which to make an
informed correction.

> > That you started off on a purely fraternal offer of information
> >for another radio hobbyist was appreciated.
>
> YOU have repeatedly claimed that I am not allied in any way with
> U.S. amateur radio. Now you claim "fraternal offers." A LIE of
> a LIE by yourself. [how hypocritical can 'done peyote...' be?]

You are NOT "allied in any way with U. S. amateur radio"...

GOOGLE is not "allied" with Amateur Radio, yet I can find
information from it, too...Shall we get the FCC to send Google a
license?

> The "W7FG Manuals" service is an old one and links to the business
> are made on many websites of interest to hams as well as hobbyists.

Congratulations on having this bit of knowledge at hand.

>
> Did you go to the www.w7fg.com site to check for yourself? Or
> didn't you just shoot off your keyboard in personal rage and anger
> about imaginary slights against your attitudes and opinions in
> long-ago discussions now defunct?

No, I've not gone to the W7FG site yet. That's for the weekend.

Nothing I stated in either post addressed the functionality of
the W7FG site or whether or not I found what I am looking for.

My comments were directly relevent to YOUR shooting your mouth
off again.

> Why are you always so angry and rage-filled, wanting to fight all
> the time? Have you seen an analyst or therapist to cure that

> aggressive, uncivil behavior?

Why did YOU feel compelled to express YOUR anger? Why are YOU so
"rage-filled" about Amateur Radio that you feel compelled to spend an
obscene amount of time lambasting persons who DO love it?

I am in this forum becasue I am a LICENSED Radio Amateur.

If anyone needs a therapist, it's you, Putzy One.

> Try getting on the list for the first copy of "Ham Radio for Dummies"
> that is rumored to arrive in April. Get one. You may learn
> something about the insides of radio and electronics boxes and
> become productive in your amateur community.

Too late, Lennie...I am already a productive member of the
Amateur Radio community.

> Keep up that good work on the morse code and making sure that
> all U.S. prospective radio amateurs MUST take that code test
> forever and ever. Morse code can be "a significant factor" in
> emergencies and "play a major role" there as the League blabs.

Too bad you are so self absorbed in YOUR rage, Lennie, to haev
paid attention to other exchanges in the last, oh, two or three years,
to know where I really stand on this.

> * "Colonel Jessup" is the character in the film "A Few Good Men"
> and protrayed convincingly by actor Jack Nicholson. The

> in arrest at the end of the film after the character lost his cool
> arrogance. "You can't handle the truth!" is Colonel Jessups'
> now-famous line that reveals his arrogance and imaginary beliefs
> about those not in the USMC.

Hot flash, Lennie...I WAS in the USMC, and "Colonel Jessup", as
portrayed by Mr Nicholson was a fictional character without precedent
or model.

You try to pidgeon-hole me with some lame rhetoric about "mythos"
of Amateur Radio, but then you try and make real-world analogies with
fictional movie characters...

Yes, Lennie...One of us needs "therapy", but one of them is NOT
me...

Take another hit of the Geritol, Lennie...

> service for eight used in dining.

Hank...you'll have to forgive Lennie.

You're correct in your assumption that Lennie is NOT an Amateur
Radio licensee...He almost takes "pride" in it.

He spends hundreds of hours ranting in a forum over a radio
service that he specifically expresses disdain and disgust for, all in
the name of exercising his right to be a putz. (THAT he does WELL!)
Then when members of that forum have the audacity to defend what they
know to be true (from practical experience), he "dismisses" them with
allegations of being Nazis, "jack-booted-thugs", "elitists", etc etc
etc...

> >If you ARE a ham and live in the US, please go read Part 97 again.
>
> It is not necessary to be licensed as a radio amateur to read
> Part 97 of Title 47 C.F.R. All the Parts of Title 47 are adminstered
> by a Commission and staff, none of whom need to be licensed in
> ANY radio service.

It's irrelevent that the Commissioners are not licensees. Such is
the nature of our government. The ladies down at the Clerk of Courts
office issue driver's licenses for 18-wheelers and dump trucks, but I
never see any of them driving one.

We are discussing the Amateur Radio SERVICE. Lennie tries to
skew the conversation by claiming that others refer to it as they
would the ARMED Forces as a "service".

The rules and regulations that pertain to the Amateur Radio Service (in the United States, anyway...) very specifically spell out certain expectations that those same Commissioners that Lennie refers to have for the ARS.

None of them say "fun".

But is this a fun way to spend one's time...!??! OF COURSE!

Is it CODIFIED that this is ONLY a HOBBY...?!?! Of course NOT!

Lennie has made other absurd claims of other radio services existing for "solely recreational purposes", yet I cannot for the life of me find ANY such service in ANY part of 47CFR...No where...When asked to produce a reference to such service, he's failed to produce.

Of course you'll not find the word "hobby" in any part of Part 97, but Lennie assures us that that's what the Commissioners "meant"...(of course he's also NOT an FCC commissioner, nor does he have a degree in jurisprudence)

Soooooo.....Lennie can ramble on for hours about his rights, his perceptions of the Amateur Radio service, his exploits with HF radio while in the Army in 1953, etc etc etc...He also spends much time whining about how HE is treated, yet he usually engages those who dismiss/ignore/refute him with profanities, indignities and inuendo...And THEN cries "FOUL!" when it's revisited upon him in like fashion!

Engage him at your caution! He's a real piece of work!

Well, Len? You said "everything run just fine".

My marathon PR (personal record) is 3 hours 57 minutes 37 seconds. Of
course that was a long time ago, and I'd need some really serious
training to do another marathon. This morning I ran for 47 minutes,
bringing my weekly total
up to 259 minutes. Nice morning, cool, sun coming up over the town of
Wayne.

What's your marathon PR, Len?

> >> It can be done very well
> >> without any amateur radio help
> >
> >How do you know?
>
> 1. By reading about it in a respected newspaper.

Did they say "the LA Marathon can be run very well without any amateur
radio help"?
>
> 2. By viewing it on broadcast television.

Did they say "the LA Marathon can be run very well without any amateur radio help"?
>
> 3. By knowing some details about it from one of its officials.

Did the official say "the LA Marathon can be run very well without any amateur radio help"?

Or is that statement merely your opinion as an inexperienced observer of both the LA Marathon and amateur radio?
>
> > Ever work at a race?
>
> Not in a foot race.

They're called "road races" by those who do them, Len. "Road" to distinguish them from track and cross country events. Your use of the term "foot race" shows your lack of knowledge about them.
>
> Why is that important to the "Economy, Stupid?"

You brought up the LA Marathon, Len, not me.

> >LA and other major marathons have been using amateur radio operators
> >for race communications for years.
>
> If you insist...and you WILL insist.

Is it true or not? Los Angeles, New York City, Boston, to name just a few.

> You are a Believer.

I'm simply telling the truth, Len. You brought up the LA Marathon, Len, not me.

> Have you ever been IN Los Angeles?

Sure - several times.

Have you ever run a marathon? Half-marathon? Ten-miler? 10K? Five-miler? 5K? I've run all of those distances and others.
>
> Have you ever worked IN any volunteer function here?

Not in LA - have you?

Have you ever worked as a volunteer at a road race? Water stop, mile marker, starting line, finish line, time keeping, set up, take down, applications, race packets, results, etc.? I've done all of those.
>
> YOU have NO relationship with the city of Los Angeles. I live here.
> You don't.

So what? Do you have a relationship the LA marathon, or with running, other than the commercial media?

You have no relationship with amateur radio other than as an observer and very verbose critic.

So if it's OK for you to comment on amateur radio, it's OK for me to comment on the LA Marathon.

btw, I probably have far more experience in marathons, running and road races than you have in amateur radio.

> Reality check: ANY marathon foot race can be done with available
> non-amateur radio communications readily available in any large
> urban area.

Really? OK, Len, tell us how it could be done. For example, the New York City Marathon. Tell us how the communications for the NYC marathon could be done without amateur radio and still have "everything run just fine".

> The first Olympic marathon event was done without any
> amateur radio "help."

I know. Some of my distant ancestors originated those Games. They didn't need any radio at all. They didn't have 20,000 marathoners like LA did, though.

> Several Games after that had NO amateur
> radio "help" and also succeeded.

Nobody denies that, Len. What's your point?

The Olympic marathons are relatively small affairs, with relatively few participants. Maybe 100 runners, all of the elite athletes, over a course carefully prepared for them. Biggest problems in the Olympic marathon are spectator control and security.

Nobody is "insisting" that the LA Marathon must have amateur radio help in order to happen. The fact is, however, that hams *do* help out there, and at many other major road races.

> >Maybe you didn't see the hams, so you just assume they are not there
> >and play no role. That's simply Not True.
>
> I don't care one way or another about "ham radio help in marathons."

Your words here disprove that claim. If you really didn't care, you would not have brought up the subject.

It's clear that you *do* care, in a negative way. You want to deny that amateur radio plays *any* significant public service role, even to the point of denying the facts. You obviously hate amateur radio and want it to die out. Why is that?

> I know a marathon can be run WITHOUT amateur radio help. That's
> been done many times.

Nobody denies that, Len. But you wrote:

"By the way, the Los Angeles Marathon was a success on Sunday,
record turn-out, everything run just fine. It can be done very well
without any amateur radio help."

That statement of yours clearly implies that no amateur radio help was
used in the LA Marathon. And that's simply Not True.

You used the cunning stunt of juxtaposition there. But it backfired on
you.
>
> You keep insisting amateur radio MUST be there

No, I don't. I simply point out that it *was* there, performing a
needed function. You weren't there at all.

The LA Marathon organizers specifically asked for amateur radio help.
Not GMRS, not FRS, not cb or cell phones. Not even a bunch of folks
with marine radios on their friends' sailboats. Licensed amateur radio
operators only were requested. For some reason that simple fact really
bothers you, Len.

Did you visit the urls I listed?

>...and that's simply Not True.

Was amateur radio a part of the LA Marathon or not, Len?

They couldn't figure all that out ahead of time?

Sounds to me like the hams were smart enough to simply let them try it
and see the problems first-hand.

Those same problems surfaced in groups searching for wreckage from the
space shuttle disaster last year.

Of course cell phones *do* have uses in those situations. Where one
specific person needs to talk to another specific person, and both are
in the coverage area, they're perfect.
>

You mean like folks who comment on marathons without ever having been
involved in one other than as a spectator? Or like folks who comment
on amateur radio without ever having been involved other than as a
spectator?

> > http://www.lamarathon.com/2004/volunteers.php

Naw, it's simpler than that.

Besides their considerable skills and experience, ham volunteers at
events like the LA Marathon provide their own equipment and usually
their own transportation and other support. Try hiring 200
"communications professionals" for a day just to supply radio
communications and see what happens to the race entry fee. (LA says
200 hams, NYC marathon says 400, but of course NYC is a lot bigger

race).

Looks like it. But there are some folks who would deny the
participation and contributions of hams no matter what they did.

> Heck they are
> supposed to be behind the scenes. Go figure.

Of course. It's about the race!

73 de Jim, N2EY

Philadelphia Independence Marathon, 1982 and 1983.

Go back to your usual participatory rantings. No one has to be IN
a race in order to WATCH it. None of the officials who run it have to
be IN the race in order to administer it.

Have you understood that yet or must you RANT and WHINE some
more about not being IN something?

Did you get a legal surname change? Try not to respond to certain
posts made to others as if they were directed to you. Few care
about your imagined personal affronts.

Go back to sitting in fromt of your orion and get more oriongasms.

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.dx,rec.radio.amateur.antenna

Regardless of your ignorance, it is the amateurs that are pointing out the potential problems of BPL. If nothing else, this speaks volumes about the need for reasonable tests for potential amateurs (not something that you can walk into a test and walk away with an 'extra' class license). The code/no code arguement, in my opinion, is moot; what is more to the point is what these amateurs can and *do* contribute, regardless of the rants of many folks who may be envious of the frequencies available to amateurs.

I worked in EMC compliance. We had a problem with interference from powerlines. Yes, it is possible to reduce the problem. Whilst it won't qualify as a test to pass a particular piece of hardware, it is *great* for determining sources of RFI. Someone has a problem with RF interference to home equipment (not necessarily amateur). How do you solve it? I've helped in both cases. Some folks have minds so closed that they can't see the forest for the trees (or vice-versa).

I remember finishing my active duty with the U.S. Navy. I suspect it was verteran's day as there had been a parade and I was in a bar later on. A few guys in Navy uniforms had a problem. I overheard the conversation. Their transmitter had low output and couldn't tune. I went over to them and asked to see the transmitter. Sure enough, a bad cap in the tank circuit. We repaired it on the spot (dang if I didn't get hornswaggled into joining the reserves LOL).

When folks like you ask "did you repair that pothole in interstate 90 between ....", you are missing the point. It is the knowlege and theory that can enable hams to assist in many situations. Although I had engaged in emergency communications on Guam Island (and it was many years ago) and an SOS on 500 KHz at sea (also many years ago), you assume that I am obsolete. I would suggest that bad capacitors still happen and the folks with some technical background still can help. Although that situation with the U.S. Naval Reserve was many years ago, I've also repaired much more modern transceivers in the past decade. I am also quite capable of reducing interference between devices today. You dwell on the past; the technically astute needn't.

BTW, BPL is *not* going to serve the "underserved". I won't explain it. You take the time and effort (*if* you have the perseverence - which I doubt - and research it).

It is a documented fact that the cell phones were all but useless to handle the emergency communication needs during 9/11. Too many of the towers had been on top of the World Trade Center buildings. Those calls that did get through took over 30 minutes to do so, which is a real problem in handling emergency communications.

In the power outage of August 2003, I personally experienced the erratic availability of cell phones.

Sure they have and can, but when the cell network is down, ham radio
will be there if needed.

100,000,000 cellular telephones cannot possibly compare with the
600,000 introverted (minus nursie) licensed amateurs. All are active,
have charged batteries, and backup generators, towers that cannot
fall, and electronics that cannot fail. Propofagion always occurs
when needed.

> environment of warfare.

All true. You never worked radio while in the service. Heil never
worked radio while in the department of state. I never set up hf
intercept, nor did branywine ever tell me to reduce power.

It is an evil genius that just made us think we did.

Robust - beyond belief. Actually incredible.

Really? No kidding?

Is that why I said that repeater owners cannot charge for repeater use?

Yep, probably.

A situation *you* sure do desire to impose upon others. I don't
know you really have anything to say of relevance or not, but
you didn't even allow the death of your father last week
(croaked March 1, became worm food March 8)to change your myopic
views or torrent of narrow-mindedness and mentally ill desire to
impose your will and "mindset" upon the newsgroup, you bush-
league Hitler.

They're not allowed in the LA Marathon.

> The L.A. 2004 Marathon was on the STREETS of Los Angeles,
> on on any "roads." :-)

They're called road races, Len.

As suspected, you were not involved in the LA Marathon in any way except as a distant spectator. Same as your involvement as in amateur radio.

Well, Len, once more you've lived up to your profile and shown us your purpose here. As if there was any doubt. Plonk time again.

Amazingly enough, no! Cell phones are seductive little things. After
all you can call around the world, send pictures of whatever, and even
look up your email on the web with them. So how on earth can such a
wonderful instrument *not* be good at running a race? Imagine, each and
every participant with their own little radio, ready for direct contact.

Any conclusion may be reached with insufficient thought!

> Sounds to me like the hams were smart enough to simply let them try it
> and see the problems first-hand.

Yup. All of us that had done events before just chuckled and waited.
First call for our help came through a couple minutes after the start.

> Those same problems surfaced in groups searching for wreckage from the
> space shuttle disaster last year.
>
> Of course cell phones *do* have uses in those situations. Where one

Sure enough. But when many people need to hear instructions at the same
time, or if the area is large and rural, You need a multi-mode system,
and not just line of site low power stuff.

>> Cell phones work for some things, but the idea that they can replace

The price for professional radio operators would be from 80 to 160
thousand dollars for an 8 hour day, according to my BOE scribbling.

I don't believe you. I don't think you've had any input from "most readers". It is interesting that you responded to a question with two distinct choices with "Not required". Do you think most readers have the idea that radio amateurs are supposed to go along with your view of how amateur radio should be regulated? After all, you have nothing to do with amateur radio.

> Go back to sulking about long-ago perceived personal affronts. That's
> your forte'.

I am forte-laden, Leonard. One of mine is that I'm a radio amateur. You aren't.

More civil discussion of morse code testing, Leonardo?

I had six Foreign Service overseas assignments. You were no more
involved with them than you are involved with amateur radio.

Smileys aside, Len, did you look at those links provided by Jim yet?
You blew a lot of smoke about radio amateurs not being involved in the
L.A. Marathon but you don't seem to have anything to counter cold fact.
What about your newspaper reading, TV viewing and your "friend". Were
they all just plain wrong?

>How do you know?

The L.A. TIMES reported that, several TV news programs reported
that, and at least one official with the Marathon said so to me.

Is everyone required to wait for the "official" word from the ARRL
on the verdict?!?!?

>> You are mighty peevish again, perceiving personal insults at the
>> slightest provocation.
>
>Not me. You're the one shouting and calling names.

I didn't name anyone in the Marathon. :-)

The very first marathons didn't need any ham radio to help them.

Why do you keep implying that marathons MUST have ham
radio help to be successful?

>>>My marathon PR (personal record) is 3 hours 57 minutes 37 seconds.
>>
>> Have you written the Guiness editors yet?

>
>You sound jealous, Len.

Of what? :-)

You haven't proved anything about ham radio being NECESSARY
to stage and operate any marathon.

>>>What's your marathon PR, Len?
>>
>> I don't do Public Relations any more,
>
>Good. Your style here indicates you'd be very bad at it.

Tsk, tsk, tsk..."you sound jealous." :-)

>> Consider that Sports CARS are in Road Races...on roads.
>
>They're not allowed in the LA Marathon.

Never said they were.

Road Races are run by sports cars on roads.

Marathoners run on foot.

TAFKARJ sounds like he is developing Road Rage... :-)

>They're called road races, Len.

I KNOW some sports car racing events are called ROAD RACES.

Try not to be too much like the Schoolmaster who was once
assigned to the far Amana Colonies...

>As suspected, you were not involved in the LA Marathon in any way except as a
>distant spectator.

Do you now need the EXACT distance from my TV set to the
northernmost point on the marathon route?!?!?!

You're getting to be as nuts as the gunnery nurse.

I has WRITTEN IN PUBLIC that I WATCHED the marathon. Are
your eyes shot from all that running exertion that you can't read?

But, you never answered about "carrying a code key" while
running. Do you?

You've never said anything about "working DX" while running
either.

Is RUNNING (on foot) something REQUIRED in amateur radio?

Or are you personally disturbed because no one ackhnowledges
your fleetness of foot and renowned running time?

Go rent a DVD of "The Running Man." Consider that the star managed to get elected to Governor of a state. Aim high, TAFKARJ. Governorship is far better than ham radio...you could win and tell MILLIONS what to do and how to behave!

Now, what in the world has all this fuss and bother you are stirring to do with AMATEUR RADIO?

Sorry to divert you from all those splended AMATEUR RADIO subjects like national economy, politics, morality, kosher food.

You keep up the good work and keep on essaying in the newsgroup every day. Folks are hanging on every word...or is that wanting to hang you for all those words? :-)

Walk the plonk...

Marathon day is a lot longer than 8 hours. Figure that the staff is on the course at least two hours before the starting gun, and that the slowest particiapnts will finish in more than 5-6 hours, plus awards ceremony, cleanup, etc., and it's not an 8 hour day for anybody. With 20,000 participants, that's 4 to 8 dollars tacked on to the entry fee.

Which reminds me...time to put the running shoes on..

You left out another block of time. For a large event, there needs to be a planning/coordination meeting in advance of the marathon that the communications staff would need to attend. Paid operators won't attend that for free either.

Like your LYING, Lennie? Your open hatred and antagonism of
licensed Amateur Radio operators in a public forum...?!?!

Don't go there, Scummy One, since you'll only find yourself in
that pool.

> > It is NOT my assertion that it is such. Ask around, Brain...YOUR
> >attribution is WRONG.
>
> Not at all. It is correct and to the point.

No, it's not.

YOU are the one who always insists that typos are indicative of
"rage". I ahve NEVER stated that except to sarcastically throw it
back at YOU when you do it yourself.

> Refusal to acknowledge what everyone else can see is only denial on
> your part.

So I guess that leaves you and PuppetBoy in there too then,
huh...?!?!

> > I have zero. So what's YOUR problem...?!?!
>
> Did "K4CAP" exist four years ago?

Nope...but it did a year ago. I still have the FCC Form 660 to
prove it.

> Did the long, libelous fictious screen name you tried to use on AOL
> to put an even more gross libelous distortion of one individual in an
> AOL home page? It only existed for three days but some saw it.
> AOL member services wiped that home page clean and took away
> your new, extra screen name.

Anything that can be proven as factual is neither libellous nor
is it "ficticious".

It was not a distortion to suggest that NO ONE should EVER trust
Lennie!

And they did not "take away the screen name", Lennie. I could
have re-wrote the entire page if I had chosen to.

The FACTS are that YOU can't stand up to the scrutiny of others
whne YOUR misdeeds are laid bare.

YOU, the ALLEGED "professional" radio engineer who can't seem to
send an e mail without misrepresenting your true intent.

Yes, Lennie...You showed YOUR true colors then.

> Others, particularly AOL members, can find out that there are
> several screen names under your single account.

Yes, there are. My wife has one, as do two of my kids. I also
have anotehr screen name I use for CAP purposes. Your point is...?!?!

The fact HERE is that all posts I make HERE are under
"k4yz@aol.com", whether I post from AOL or I post from Google...

> So, you've tried to bluff through another very wrong statement. You
> will not acknowledge that those screen names exist and your only
> comeback will be misdirections into more personal insults.

Nope...Acknowledged them right here. And you're roght...anyone
can go find them if they care to. None of them are in this forum with

my name, either.

> >> I'd rethink
> >> > making such a silly insinuation...

> >
> > OK, Brain...if you insist. As long as it makes you feel warm and
> >fuzzy to hold on to it.
>
> Reality isn't making warm and fuzzy. Reality can be harsh, cruel.

Yes...it can...so harsh and cruel that it has KEPT you from being
able to go about your self-assigned mission to misrepresent the true
character of the Amateur Radio Service in a public forum without
having your misrepresentations and blatant lies from being allowed to
go unchallenged.

Too bad for you.

> Stay in your little imaginary world where you are safe, even if nuts.

What "imaginary world" would that be, Lennie?

The one where I am a licensed Amateur Radio operator, authorized
by law to engage in a plethora of activities involving the emmistting
of RF energy for any number of purposes...?!?!

OOOOOPS! >>NOT<< imaginary! So says the FCC!

Or maybe you meant the "imaginary world" wherein I am a licensed
Aviator, duly authorized by the FAA to act as pilot-in-command of
single engine land aircraft...?!?!

OOOOOOPS! >>NOT<< imaginary either! So says the FAA!

Or perhaps you meant the "imaginary world" wherein I am a
licensed Nurse, licensed to perform the duties of a professional
Nurse, professionally credentialed in 15 different SE Tennessee
healthcare facilities...?!?! With endorsements in Advanced Cardiac
Life Support, Pediatric Advance Life Support, EMS-Children, BCLS
Instructor, etc etc etc...?!?! Is THAT the "imaginary" world you are
refering to, Loser?

OOOOOOPS! AGAIN >>NOT<< imaginary! Got the license from the
State of Tennessee and invoices for services rendered to prove THAT
too!

Soooooo....WHICH "imaginary" world is it that you refer to,
Lennie...!??!

> You need to relax. Go away from the Internet and play with your
> radios. The Internet is full of those who have and can put you down.

You TRY to put me down, Lennie, and every time you do you come up looking more foolish than when you started...So you go right on ahead and knock yourself out. I'm enjoying the show!

Steve, K4YZ

Sorry, Brain...I most certainly did.

Once again, you're caught with your pants down, and it's NOT a
pretty picture!

> Now you are saying that you simply stole it and presented it as your
> own material?

It will be a looooooooong time before I am that lame and that
desperate for "material", PuppetBoy.

I've "attributed" it to your master frequently...usually after YOU
try to run it back to me.

This is NOT the FIRST time I've told you about it, nor is it the
first time I'e addressed it to your "mentor", so don't try to slide
this one under the door...You're TOO LATE!

> > What >>I<< have stated is that said mistakes are "rage" as

>
I'm not sure.

Seems to me that at the bottom of it all is the fact that people will pay the inflated tuitions because colege is seen as an absolute necessity these days.

Jim has his own ideas and objectives when they come to you. We
usually agree 90% of the time...this is not one of them.

> You're obsessed.

Coming from a guy who continues to post to a newsgroup about a
radio service that he's stated he has no use for, we should take you
seriously...WHY...?!?!

You're a liar...that means I have no tolerence for you.

You misrepresent the truth about the Amateur Radio service. You
do this because you are an evil, petty little person. But you
wouldn't be the FIRST petty little person who got his way by repeating
the same lies over and over...I just intend to not LET you have your
way.

So far, it's working.

Steve, K4YZ

Is Lennie must be getting lazier...It used to be he'd try to waffle
through at least two or three posts before trying to cut-and-paste his
way out of having cornered himself...but this time he didn't even wait
THAT long.

Ya cudda made "points" with everyone in this forum, Lennie, by
just offering the info on the manual and then accepting some gratitude
for it's rendering.

Instead you had to make it one more opportunity to bad-mouth
Amateurs in general, me in particular, and then make the fool that you
are even more laughable with even more obvious lame attempts to dig
your way out while trying to prove your "superior intellect".

No, I have not.

You'd better re-think that, since Google is at EVERYONE'S
disposal.

Do you REALLY want me to go pull up an example and PROVE YOU
WRONG AGAIN?

> > I HAVE publically stated in this forum that I acknowledge that
> >you know far more about the inner workings of the box than I do.
>
> You have NEVER said anything in public about "my having far more
> (knowledge) about the inner workings of the (FM2015R) box."

YES, I have, although not SPECIFICALLY about the FM2015R...

I have SPECIFICALLY stated that I acknowledge that your superior
knowledge of the inner workings of "the box" (refering to electronic
devices generically) on SEVERAL occassions.

Again, if you put me to the task of wading through all thos
Google archives to once again prove you WRONG, I will, but then I will
have bragging rights on you for the next decade.

> NEVER.

Never say never, Pumpkin...cuz if you DO, it WILL come back to
HAUNT YOU!

> If the "FM2015R" is an amateur radio, then, by YOUR own rules in
> here, I cannot possibly know anything about it because I have "zero"
> experience in amateur radio.

The FM2015R is an elctronic device designed to be used primarily
by licensed Radio Amateurs.

I don't fault your knowledge of electronics...I fault your
knowledge of AMATEUR PRACTICE. I am sure you were an adequate bench
technician at some point in your life, and could probably do OK with
current technology.

> Your "definition" is multiply faulty. I have learned many many things
> about radio and have applied them in all disciplines of such radio.
> All radios work by the SAME physics regardless of any human
> legislation or advertising/marketing or membership organizations say.

And as I have sated over and over and over, Lennie...

It's NOT about the physics of radio...It's about application...

> >When
> >YOU respond in a fraternal, respectful manner I ahve done the same

> disagreements...which you did as shown.

Lennie, there is nothing about Amateur Radio in any aspect of
which I participate that is "not real".

You have TRIED to "explain" your OPINION on Amateur Radio, but in
as much as you have NO practical experience from which to substantiate
your comments, you usually falter in facts!

> You inadvertently LIE in stating I say "bad things" about the Amateur
> Radio Service. I do NOT. I state up front that I say bad things about
> INDIVIDUALS who have amateur radio licenses, because they do so.

I have not lied, inadvertently or otherwise.

Furthermore YOUR above statement is in-and-of-itself untrue.

You BLATANTLY stated the American Radio Relay League is
dishonest. When tasked with providing something OTHER than your
opinion, you have failed to do so.

No evidence = Obvious lie.

> YOU do NOT represent ALL of U.S. amateur radio. Ergo, you cannot
> transpose your personality to that of ALL U.S. radio amateurs. (they
> would feel or should feel insulted by such a gross misrepresentation)

No, I don't. But I "represent" enough who share some of the same
opinions when it comes to YOUR honesty, integrity and character.

> YOU cannot seem to accept the slightest correction or rebuke or
> even difference of opinion to your own personal opinions with any
> sort of civility. YOU can't handle the truth and typify the "Colonel
> Jessups" of your imaginary "service" world.*

I accept lots of "corrections"...Especially when it's brought to
my attention in the same fashion that the bearer would like to
beaddressed if the shoe were on the other foot.

And it's not YOUR place to "rebuke" anyone in this forum. You
don't have the experience in Amateur practice from which to make an
informed correction.

> > That you started off on a purely fraternal offer of information
> >for another radio hobbyist was appreciated.
>
> YOU have repeatedly claimed that I am not allied in any way with
> U.S. amateur radio. Now you claim "fraternal offers." A LIE of
> a LIE by yourself. [how hypocritical can 'done peyote...' be?]

You are NOT "allied in any way with U. S. amateur radio"...

GOOGLE is not "allied" with Amateur Radio, yet I can find
information from it, too...Shall we get the FCC to send Google a
license?

> The "W7FG Manuals" service is an old one and links to the business
> are made on many websites of interest to hams as well as hobbyists.

Congratulations on having this bit of knowledge at hand.

> There are many businesses involved in supplying service manuals
> for electronic equipment, easily found by a simple Search function
> available at all major ISPs. I suggest a review of the functions
> available to AOL users as a benefit to your own education for
> Internet operations.

I was willing to take the info you suppled, say "tahnks" and be
on my way.

You found it necessary to add the lampooning. No problem. I can
play too.

> > That you finsihed off in your usual spiteful slashing was
> >typical. At elast this time you did it all in one post...
>
> There is NO "elast" in or about time. TRY to control rage and anger
> when typing. Clean copy is a positive attribute in communications.

A typo is not about rage or anger. It's about the wrong finger
on teh wrong key at the wrong time...Nothing else.

> >PS...Thanks for the tip, Len.
>
> WHAT "tip?" W7FG has been supplying manuals for a long time.

So...?!?!

You can't take a bit of gratitude for your efforts?

If someone doesn't know about something and you inform them of
it, you just gave them a "tip". I didn't know about W7FG. Now I do.
If I am asked a similar question by anotehr person, I'll pass it on.

> I never looked to see if your particular part number was available
> there. I just pulled down a copy of an H-P 606A signal generator

> Did you go to the www.w7fg.com site to check for yourself? Or
> didn't you just shoot off your keyboard in personal rage and anger
> about imaginary slights against your attitudes and opinions in
> long-ago discussions now defunct?

No, I've not gone to the W7FG site yet. That's for the weekend.

Nothing I stated in either post addressed the functionality of
the W7FG site or whether or not I found what I am looking for.

My comments were directly relevent to YOUR shooting your mouth
off again.

> Why are you always so angry and rage-filled, wanting to fight all
> the time? Have you seen an analyst or therapist to cure that

> aggressive, uncivil behavior?

Why did YOU feel compelled to express YOUR anger? Why are YOU so
"rage-filled" about Amateur Radio that you feel compelled to spend an
obscene amount of time lambasting persons who DO love it?

I am in this forum becasue I am a LICENSED Radio Amateur.

If anyone needs a therapist, it's you, Putzy One.

> Try getting on the list for the first copy of "Ham Radio for Dummies"
> that is rumored to arrive in April. Get one. You may learn
> something about the insides of radio and electronics boxes and
> become productive in your amateur community.

Too late, Lennie...I am already a productive member of the
Amateur Radio community.

> Keep up that good work on the morse code and making sure that
> all U.S. prospective radio amateurs MUST take that code test
> forever and ever. Morse code can be "a significant factor" in
> emergencies and "play a major role" there as the League blabs.

Too bad you are so self absorbed in YOUR rage, Lennie, to haev
paid attention to other exchanges in the last, oh, two or three years,
to know where I really stand on this.

> * "Colonel Jessup" is the character in the film "A Few Good Men"
> and protrayed convincingly by actor Jack Nicholson. The

> now-famous line that reveals his arrogance and imaginary beliefs
> about those not in the USMC.

Hot flash, Lennie...I WAS in the USMC, and "Colonel Jessup", as
portrayed by Mr Nicholson was a fictional character without precedent
or model.

You try to pidgeon-hole me with some lame rhetoric about "mythos"
of Amateur Radio, but then you try and make real-world analogies with
fictional movie characters...

Yes, Lennie...One of us needs "therapy", but one of them is NOT
me...

Take another hit of the Geritol, Lennie...

Of course. I just used the 8 hours as a real back of the envelope
thing. You can tie up a lot of time between assignment, training and
other meetings. And if you are using professionals they will need paid.

They are definitely the ones that are stupid. That bankruptcy follows
them forever. Seven years is the legal time limit, but face it, it's
forever. Then when they do get some semblance of credit back, they
aren't getting the most favorable rates.

Colleges build a lot of new buildings these days. They are involved in
a lot of the research that used to be done by Research and Development
divisions of business. Many of them don't get as much support from their
State governments as in years past. All of this adds up to increased
costs that are driving the education cost inflation.

> Seems to me that at the bottom of it all is the fact that people will pay the

For now.

That's absolutely correct! And it's probably a series of meetings and coordination settings, too.

Thanks, Dee.

Again, the problem consists of getting the big picture and taking the long
view. One can imagine that the reason for the road in the first place was so
the tourist/vacation set could have easier access to the fishing and lake....

bwaahaahaa!

But I agree that even if TDP works (both technically *and* economically), it's
only a piece of the puzzle and not a complete solution.

Classic collectivist thinking. The benefit of the many supposedly justifies trampling on the rights of the few. Usually "the many" is wildly overestimated and "the few" wildy underestimated.

>> Remember that amateur radio is a hobby that
>> unjustifiably occupies valuable radio spectrum.

Says who? The ITU and its predecessors have justified it since at least 1927.

More to the point:

Why should BPL be allowed to pollute the radio spectrum with noise when other, better technologies (DSL, cable, 802.11xx) exist to do the same job without the noise pollution? For example, cable TV companies spend serious $$ to keep their systems buttoned up tight - why should their competitors be allowed to radiate?

Who are the folks who will be served by Access BPL? All of the test and deployment sites I've seen mentioned are in suburban/urban areas that are already served, or could be served, by DSL and/or cable broadband. Farmer Jones isn't on their list yet. Nor is he likely to be, for exactly the same reasons cable and DSL aren't.

Is BPL cheaper? One deployment I say said $29.95 a month - for the first three months! Then it goes up to $49.95. Meanwhile the telcos are offering bundled packages of POTS, cell and DSL for less than $100/month.

For Sale - Texscan Sweep Generator model SG-677U $99.00 + shipping & handling.

Unit is mounted in a very sturdy military carrying case but can be removed for rack mounting. I have no way of testing other than making sure it turns on and the dials and gages looks like they are working, so I am offering on a money back guarantee (less return shipping cost). Pictures can be found at www.dentonmarket.com or contact me at mikelgiles@bfesystems.com

Are cars *really* more expensive, adjusted for inflation?

Back in 2001, my Honda Odyssey minivan cost about $26,000 new. How much did, say, the classic Ford Country Squire station wagon with the woodlike sides cost in 1964? How much has typical income increased in that time period?

I just paid it off, and it's got a lot more usable life in it. So the total lifetime cost may be less in inflation-adjusted dollars.

>Leasing looked good for a while, but of course you have no trade-in, and

Agreed. But that's in large part because they are not meant to last that long. And because enough people buy on price alone.

Meanwhile, folks like me cherrypick the trailing edge for pennies. This Amidon 350MHz box cost me a lot less than $100, and most of that was for the CD-ROM burner and the modem.

And while maybe it *could* have been done by "professionals", the fact is that
it *was* done by amateurs.

Some folks get all bent out of shape by such plain, simple facts.

According to the Dem's, there's a glut of workers, i.e., unemployment
is at Great Depression levels.

Thus, according to your targeted grant scheme, there will be no
grants.

Meanwhile jobs continue to flow overseas.

Where you been, Bill? Most new houses over the past 50+ years have been mass-produced. The Levitt brothers made it a science.

>That leads to considerable
>customization and often to totally unique homes. Not so with
>consumer products.

Most homes are built by standard techniques that permit customization at little or no extra cost. Ask Kim when she gets back.

I seem to remember you using terms like "Atila" and "beligerant" and you used them more than once, indicating not a typographical error but in inability to spell the words.

You're quite a fellow, Len.

>TAFKARJ, my theory is that he can't help himmself. He is obsessed with Len.

There's more to that than is apparent on the surface.

The PCTAs all use misdirection via questions or "challenges" on other subjects in order to divert the thread away from the morse code test issue. By being sufficiently inflamatory, those misdirections now attract others who just want to fight and holler at others. The threads diverge and take on new subjects and the PCTAs are saved...their arguments for retention of the code test were not viable so they feel secure in not having "lost."

TAFKARJ uses the newsgroup as a Chat Room to talk about almost anything BUT the morse code test and ventures far, far afield from amateur radio policy subjects, so far that they don't include any amateur radio at all. He wants to be an essayist.

Mr. Foreign Service (who doesn't know that the Amana Colonies are in Iowa!) simply wants to fight. He isn't quite so obsessed as the gunnery nurse but he has the arrogance of an SA fairy. He likes to use the misdirection of "He's an amateur and I ain't" (in varying words) therefore trying to imply that I am "nothing." :-)

The gunnery nurse is just nuts and can't get his act together. He can't take the slightest negative comment without going berserk.

A common trait among them is one of Control. They want (perhaps need) to moderate the newsgroup to their view, their opinions, their personal likes/dislikes. Control and Ego together to build the concept of righteous service to the nation by being hams.

Amateur radio is supposed to be an enjoyable hobby. But, with the tree regulars mentioned above (up a tree without a piddle), it's all one of being inordinately proud of their imaginary world and a desire to be respected because of that Belief.

The morse code test is being removed from the regulations of many nations' amateur radio. PCTAs cannot abide by that. They remain in denial since loss of the morse test is a loss to their self-esteem. They can't use that mighty morse test as a bragging point if it is eliminated. "If they had to take a morse test, EVERYBODY has to take a morse test to be as 'good' as they."

I guess someone should have told the Governor that all that stuff he just lauded Amateurs for never happens, that cell-sites never fail, that every Public Service employee using the "company radio" is more valuable than trained Amateurs, and that his Proclamation was just a self-serving waste of time that only perpetuates the "mythos" of Amateur Radio's public service role...?!?!

Naaaaaahhhhh...Let's all enjoy the moment and wish our congrats to all WI Hams...

Lennie..."I am laughing at the superior intellect...! ! !

73

Steve, K4YZ

A PROCLAMATION

WHEREAS, during times of national and state emergencies, amateur radio operators continue to provide communication resources which are provided at no cost to the Wisconsin taxpayers; and

WHEREAS, there continues to be a need for amateur radio operators to provide emergency communication capabilities as a backup resource during state and national emergencies; and

WHEREAS, amateur radio operators participate in the Community Emergency Response Teams (CERT) program as volunteers providing their communications expertise; and

WHEREAS, amateur radio clubs throughout the State of Wisconsin, provide radio courses of instruction, encourage and assist with grade school and high school programs about amateur radio, and in the process, enhance student interest in science, geography and physics, thus provide the opportunity to become a licensed amateur radio operator; and

WHEREAS, amateur radio operators, participating in SKYWARN provide trained and radio equipped severe weather spotters to assist the National Weather Service and the State of Wisconsin; and

WHEREAS, amateur radio organizations such as the Radio Amateur Civil Emergency Services (RACES) and the Amateur Radio Emergency Services (ARES) are organized and trained to provide emergency communication support; and

WHEREAS, amateur radio organizations such as Amateur Radio Emergency Services (ARES) provide communication support for community and public

service events to help ensure the safety of all attendees, participants and observers; and

WHEREAS, amateur radio operators test their capability to operate “in the field” using alternate power sources during the June annual Field Day;

NOW, THEREFORE, I, Jim Doyle, Governor of the State of Wisconsin, do hereby proclaim June 26, 2004

AMATEUR RADIO OPERATOR RECOGNITION DAY

I commend this observance to all citizens.

IN TESTIMONY WHEREOF, I have hereunto set my hand and caused the Great Seal of the State of Wisconsin to be affixed. Done at the Capitol in the City of Madison this fifth day of March in the year two thousand four.

Jim Doyle
Governor

Douglas La Follette
Secretary Of State

Talk about obsessed.

The Morse Code test issue is being respolved in Washington and
Gettysburg via the NPRM process. All indicators are that it will be
deleted, or at least reserved for the highest class (and greatest
breadth of priviledges...Mostly in parts of the spectrum where only
Morse Code can be sued anyway...).

There's no "misdirection", Yuor Scumminess.

And if you'd ANSWER some of the questions, they MIGHT go away, IF
you have a valid answer for them..."I don't HAVE to answer and you
can't make me" is pretty sophmoric...nothing less that we expect from
you and PuppetBoy, however.

True only to a point. Around here, unless it is a townhouse
or condo development, the new houses are still stick built
with a great deal of "customizaton" involved. You'll find
similar styles in the same development, but no two will
look alike.

When Levitt did his thing in Long Island and PA he
had only a small set of plans and lmited customization.
Over time, however, through additions, remodeling, etc the
"sameness" has become less and less in those communities.

> >That leads to considerable
> >customization and often to totally unique homes. Not so with

Where do you live? Usually ANY change to the basic
model choosen ends up as an extra cost. Maybe it doesn't cost
the builder that much, but it will definetly cost the buyer.

> >Your point?
>
> That when they stopped taking the long view,
> they took a real beating.

They took a beating because the competition stepped
up to the task of delivering what a significant part of the
public wanted. If the Toyotas of the world hadn't
been there to deliver cheaper, better mileage and functional
cars, then the public would have stayed with the US
makes. Add in also the gas crunch of 1973 and that drove
a majorshift towards fuel efficiency demands of consumers.
Before that, who cared about gas mileage when gas was
selling at $0.30/gal or less.

> And they had to go hat-in-hand to the govt. to
> keep from being wiped out completely. And

I agree...and that was their own undoing.

> It took legislation and near-bankruptcy to
> get safer, cleaner, more efficient US cars.

The vast majority of people don't
give a hoot about cleaner or safer. They do care about

efficiency because they can measure that in
their monthly bufged.

> I think it can, and for the better - if we want it to.

HOW is that going to change? Two income families
WANT all their toys NOW. They don't want to wait
until the career of the single wage owner gets to the
point where they can afford stuff. Just look at the size
of homes that relatively newly married couples are
buying.

If you think the "double income" lifestyle is driven by
nexessity alone, then you're imagining it. Like I said,
they want their toys today, they want vacations in Aruba
today, they want the best SUVs, Plasma TV, etc. and
they want it NOW.

Here's a perfect example.
On the Suze Osmon financial show the other
day a woman was describing how she was going into debt
because everything was Sooo expensive and she had no
way to reduce her monthly expenses...GUESS WHAT?....
this "poor woman" still was doing her $3 a day double Latte,
an annualtravel vacation, buying DVDs and music CDs
every month, driving an expensive car....etc.

This was all purly discretionary purchases that could have
and should have been stopped if the woman truly wanted
to live within her means.

Another examples included a couple
who still took an expensive vacation even though the
husband had lost his job and was out of work for
several months already.

Cheers,
Bill K2UNK

Dee,

800 square feet (or even 1200) is a very small house! Where do you get those figures?

But you do have a point in that the typical middle-class houses of 40-50 years ago were built to a different paradigm than today. Those houses typically were

built with very few closets and bathrooms, simple, tiny kitchens, no air conditioning and maybe a 1 car garage. OTOH, basements, porches and attics were much more common back then.

Another factor is the cost of running the house - maintenance, utilities, insurance and taxes.

The big question is whether a comparable house in a comparable neighborhood today is as affordable in total cost as 40-50 years ago.

No, the subject is the morse code test. It is not about Control by PCTA or the incessant name-calling done by yourself.

> The Morse Code test issue is being respolved in Washington and >Gettysburg via the NPRM process.

Absolutely incorrect.

As of this date there is NO new Notice of Proposed Rulemaking (NPRM) concerning Part 97, Title 47 C.F.R.

So far there have only been 14 PETITIONS given a docket and
shown to the public with comments invited.

There is a PROPOSED petition by the ARRL which, so far, is only
seen by the public on the ARRL website. The FCC has not given
it a docket number nor shown it on its website.

"Gettysburg?" Someone gave you the wrong Gettysburg Address.

>All indicators are that it will be
>deleted, or at least reserved for the highest class (and greatest
>breadth of priviledges...Mostly in parts of the spectrum where only
>Morse Code can be sued anyway...).

Are you going to "sue" the government to make morse code testing
there forever and ever?

There are NO "all indicators." You are imagining the FCC and ARRL
are one and the same insofar as regulations are concerned.

The ARRL supposed "petition" remains on their website. It is NOT
a petition with invitation for public commentary from the FCC.

ARRL does NOT make amateur radio regulations. It only implies
it does.

ARRL still has membership LESS than a quarter of all licensed U.S.
radio amateurs. ARRL is therefore a MINORITY special-interest
group.

> There's no "misdirection", Yuor Scumminess.

YES there is. Your posting is an example. Total IGNORANT
rambling trying to "draw fire" (so to speak) coupled with both
name-calling and rage-induced typing mistakes ("Yuor").

If you had any sincerity about discussing any subject matter (you
obviously don't, only want to fight), then you would have identified
the difference in FCC docket subjects and what they mean.

You obviously don't know them.

The FCC has made definitions of NPRMs, NOIs, (petitions for) RMs
available to the public long before the Internet was formed, before
the Internet went public access.

You should, but obviously don't even after a long licensed period,
at least acquaint yourself (if you can't learn) with the rule-making
process AND who is in charge of amateur radio regulations.

Hint: ARRL is NOT in charge, never was.

> And if you'd ANSWER some of the questions, they MIGHT go away, IF
>you have a valid answer for them..."I don't HAVE to answer and you
>can't make me" is pretty sophmoric...nothing less that we expect from
>you and PuppetBoy, however.

You are NOT the moderator in here.

You are NOT some kind of "official" in this newsgroup who can demand answers.

You are NOT any sort of "NCO" Dill Instructor and this is NOT the corps.

You are NOT anything but a poor deluded and ignorant petty person trying to control others by insults, innuendo, and ignorant ramblings of suppositions from an obviously NOT-insider.

Stop trying to impose your own personal fantasy on others. You can NOT transform reality to suit yourself...try to suit yourself to the reality. Accomplish that and you've made yourself acceptible to others.

Right now you are NOT acceptible.

European fuel prices are that high in large part because of very high taxes.
The tax revenues are used for the roads and also to subsidize bus, transit
(Metro) and rail service. Unlike the USA, public transportation in Europe is
not expected to make money or even to meet its own expenses.

>Though almost 50%
>driving diesel (abt 0,80 euros /liter) powered vehicles (exluding commercial

That's only $2.00 per gallon! I've seen diesel prices in excess of $2 gallon
here at times.

>
>Modern Diesel engines have a mileage per gallon of 60 or 70.

Only in small cars.

>And their
>performance is not less the gas engines.

Agreed. But the first-cost is greater. And at US fuel prices, the difference
may not be worth it.

Suppose the diesel car gets 60 MPG and the equivalent gasoline car gets 40 MPG.
And suppose the car is driven 12,000 miles per year. That's 300 gallons of
gasoline vs. 200 gallons of diesel. If both fuels cost about the same (as they
usually do in the USA), the saving is only $150-200 per year. Compared to the

price of the car, insurance, repairs, maintenance, etc, that's not much saving.
>
>So, now you can rest back at your next refueling stop, let the gas go into
>your tank, and when at the cashier, just SMILE.
>You know, you are filling up CHEAP.

Back in 1980 I bought a VW Rabbit Diesel. Over its 17 year lifetime, I got 43 mpg combined (I kept very accurate records). An equivalent gasoline Rabbit would have probably done about 30 mpg.

But the diesel engine cost $900 more back then. Considering all factors, I didn't save very much driving an oil burner.

971. BPL NPRM v. NOI

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-14 23:56:05 UTC
From: lenover21@aol.com
Message-ID: <20040314185605.05539.00004761@mb-m16.aol.com>
Source record: 88985

It's generally agreed that Access BPL will be a bad thing in any urban radio environment. It's also apparent that way too many commenters are trying to voice their grievances to the FCC in the wrong place.

FCC 04-29, the NPRM or Notice of Proposed Rule Making, was released on 23 February 2004 with a 45 day period for Comments and a total 75 day period for Replies to Comments.

Once an NPRM is released, any previous documentation (comments, threats, entreaties, etc.) on the same subject are essentially ignored by the FCC for the purposes of making new rules indicated in the NPRM. While the website location may remain open for comment on a subject long after the subject is closed, those remain just bits on a very large hard drive and do not have to be looked at by the FCC for any sort of rulemaking.

ET Docket 03-104 was an NOI or Notice Of Inquiry request by the FCC to get suggested standards and testing for Broadband over Power Lines (now called "Access BPL"). By the FCC's format, the first two digits indicate the year of release (in that case 2003). The comment and reply-to-comment period on 03-104 is long over, yet radio amateurs keep posting on 03-104, even after an NPRM has been released nearly a month before.

03-104 now has 5,713 documents in its ECFS section as of Sunday, 14 March 2004. At least 600 of those were submitted AFTER the initial notice of the NPRM (12 February 2004). Any further input at 03-104 is not going to do any good. According to the 12 Feb 04 Notice, the Docket number is 04-37. The NPRM is 04-29. As of Sunday, 14 Mar 04, the ECFS listings indicate the following number of documents on the two dockets -

04-29: 5 04-37: 21

If anyone REALLY wants to make their voice heard on the BPL subject, the above are the two places to file (I don't know yet why the initial notice said "docket 04-37" but my Comment went to both and were indicated as accepted).

The R&O (Report and Order) that established the latest Restructuring in U.S. amateur radio was FCC 99-412 and was effective 30 Dec 99. By the ECFS listings on the NPRM 98-143, 218 sent in Comments AFTER that date. All commentary on 98-143 was cut off on 15 Jan 99 but many continued on regardless. The last person to "file" comments on 98-143 was Peter Alterman, PhD, W2CDO, document accepted 24 Sep 03 (!),

over two and a half years AFTER the R&O. Does anyone think
that 200+ comments filed on an NPRM after an R&O has been
issued will somehow make an R&O go away?

No one HAS to file anything on any subject with the FCC. Hams
can just let the ARRL do all the work for them and go back to
playing with their radios. However, anyone who really and truly
cares to comment as a thinking, independent citizen has an
excellent opportunity to speak DIRECTLY to our government.

There's no real delay with electronic filing. But...there's only about
two weeks left for initial Comments and a month more for Reply to
Comments and back-and-forth on same. Time doesn't stand still
and a minority membership organization can't do all the effective
speaking for you.

The alternative is to do NOTHING. Very safe, no effort required.
But, you don't qualify all the subsequent whines and crying about
the awful interference on HF when you did NOTHING. You did
NOTHING even if you sit around high-fiving all the other do-nothing
hams about your self-perceived wonderfulness and glorious
"service" to something or other.

CB was created 46 years ago and hams of today are still crying
and whining and P&Ming about the FCC "stealing away 'their' band"
even though they may not have been born when CB was.

DO SOMETHING. Tell the government what you think.

LHA / WMD

Yeah, that's exactly the problem we face (well, that and a lack of appreciation for irony, judging by some of the responses I'm seeing to your post)...non-hams, including a lot of businesspeople involved in lines that are looking for more frequencies to use, look at it from just that perspective: hamming is a fringe hobby that eats up valuable spectrum and provides nothing to the average person that they can't already get from the Internet. That's the superficial sound-byte opinion, and people won't invest much time in trying to get beyond that. One can only educate those who want to be educated...

Amateur Radio Newsline(tm) Report 1387 ï¿½ March 12, 2004

Amateur Radio Newsline report number 1387 with a release date of Friday, March 12th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC says that automatic stations have to avoid willful interference to other hams. Also, a magazine editor speaks out on restructuring. Hear the details on Amateur Radio Newsline report number 1387 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: AUTOMATIC RESPONSIBILITY FOR ALL HAMS

The FCC says no Amateur Radio stations are exempt from the requirement to avoid unnecessarily interference with ongoing communications. This includes automated operations. Amateur Radio Newsline's Rick Johnson, KA9VZD, is in Antioch Illinois with rest of the story:

--

According to the ARRL Letter, FCC rules enforcer Riley Hollingsworth says that it is important for all stations, including automated ones, to realize that they are responsible for any interference caused when they come on top of existing communications Hollingswoth told the ARRL Letter that an amateur had written to him alleging that what appeared to be automated PACTOR stations that were routinely starting to transmit atop PSK31 QSO's on 40 and 30 meters.

In response, Hollingsworth noted that there are no exemptions for automated stations. Rather that the Amateur Service rules address interference with other communications. The rules say that no amateur operator shall willfully or maliciously interfere with or cause interference to any other radio communication or signal.

The amateur who filed the complaint reportedly also contacted one of the PACTOR stations in an effort to develop a dialogue to solve the problem. Hollingsworth expressed the hope that all involved in the PACTOR versus P-S-K 31 problem can work things out. He also points out that stations responding to automated interrogations are equally responsible for not causing interference to existing communications.

For the Amateur Radio Newsline, I'm Rick Johnson, KA9VZD, near Chicago.

--

Hollingsworth also issued advisory letters to three hams who operate automated stations to remind them of the rules. (FCC, ARRL Letter)

**

ENFORCEMENT: HAM WHO ALLEGEDLY HARASSED POLICE ASKED TO EXPLAIN OR TURN IN HIS LICENSE

The FCC Enforcement Bureau is once again naming names and it has asked one ham to explain why he allegedly transmitted on a public service frequency to harass law enforcement. Henry Feinberg, K2SSQ, has the rest of the story:

--

In a February 18th letter to Russel A. Brown, N1KHV, of Palmer, Massachusetts the FCC says that it is considering action based on a February 3rd Incident Report from the Monson Police Department and a February 15th Investigatory Report and a Statement. The latter reportedly was signed by Brown and documents his deliberate operation on Police frequencies without a license. This, the FCC alleges was an attempt by Brown to interfere with police communications and harass police personnel.

The FCC inquiry makes it clear that the information he submits will be used by the Commission in determining Brown's qualifications to remain a Commission licensee. The FCC also has given Brown the option of voluntarily submitting his license for cancellation in order to avoid a hearing on the issue. Brown was told to indicate his preference in his response which was due within 20 days of the FCC letter of inquiry being issued.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in New Jersey.

--

The FCC also warned Brown that providing a willfully false or misleading reply would be the subject of a separate enforcement action and could subject him to additional sanctions. (FCC)

**

ENFORCEMENT: CHANGING CALL SIGNS BRINGS FCC INQUIRY

The FCC wants to know why a Tennessee radio amateur keeps changing his call sign. And, in a February 18th letter it is asking Donald H. Binkley the regulatory agency is asking the Nashville ham to explain why he has been jumping between two calls for the past six years.

According to its letter of inquiry, Binkley currently holds the call K4WX. The FCC says that license grant was originally made on September 23, 1998. On June 19, 2000 the FCC says that Binkley filed an application to change his call sign from K4WX to N4ZZ. That

application was granted on July 7, 2000. Then, on May 15, 2002 Binkley applied to change your his sign from N4ZZ back to K4WX. That application was granted on June 4, 2002. Now, Binkley has applied for the N4ZZ call once again and this time his request appears to have raised a proverbial red flag with the FCC. As a result, the Wireless Telecommunications Bureau has forwarded the latest application to the enforcement folks for follow-up and review.

In his letter to Binkley, FCC rules enforcer Riley Hollingsworth says that these ongoing applications raise questions about apparent abuse of the licensing system. He notes that the Communications Act gives the Commission the authority to request information from licensees and applicants regarding their applications and operation of their radio stations. And that's just what he is doing with Binkley,

He has told K4WX to respond stating his intentions regarding the filing of these applications. He also told Binkley to let his office know which of the two call signs he wants to keep. Binkley was given the usual 20 days from the date of the FCC's letter to respond. (FCC)

**

RESTRUCTURING: AN EDITOR SPEAKS OUT

The editor of a popular ham radio magazine says that his readers have strong opinions on restructuring, and he wants them shared. In an interview with Amateur Radio Newsline's Mark Abramowicz, NT3V, CQ's Rich Moseson, W2VU, talked on a general level about the various restructuring proposals and about his upcoming C-Q reader survey:

--

CQ's Rich Moseson says there's been an active dialogue going among readers of the magazine since the latest round of amateur radio licensing restructuring proposals landed at the FCC's door:

--

"We have a whole raft of petitions that have been filed with the FCC over the past several months all proposing various things from radical changes to little tweaks from eliminating the code requirements completely to adding new ones," Moseson says. "It's a great opportunity for discussion and for a forum on what the ham community thinks our hobby should look like going into the future."

--

Moseson says despite the diversity of those proposals, he says there seemed to be some consensus emerging among those who submitted comments to the FCC and other forums:

--

"It looked like the majority of those people would agree on a restructuring where the code requirement was kept in place at 5 wpm for Extra," he says.

--

And now that the American Radio Relay League has weighed in with its own proposal - a no-code entry license called the Novice - complete with HF privileges, Moseson says CQ wants to know what readers think.

--

"W5YI's 'Washington Readout' colum is all about the League's proposal in detail and our reader survey for April is also about the League's proposal," Moseson explains. "It's going to be asking our readers what they think of each of the major points of the proposal, whether they agree or disagree or have no opinion. And we'll, of course, be reporting the results of that survey in probably the June issue."

--

Even if you're not a CQ subscriber, you can find a copy at a newstand or bookstore.

Moseson says amateur radio must and has kept in step with the times:

--

"I'm not sure what we're going to come out of this with or what direction it's going to go to, " Moseson says. "But one of the points that I've always made is that if we are going to keep ham radio as a healthy, vital hobby and service then it has to adapt to changing times and the licensing structure has been doing that over the course of many, many years."

--

As to how soon, we might expect action from Washington. Moseson says it's difficult to predict:

--

"My guess would be the earliest that you'd see any kind of a decision from the FCC would be the end of this year, probably more likely about a year from now in the spring of 2005," Moseson says.
--

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Moseson also offered his opinion that even if Morse testing was not included as a requirement for any of the license classes that it wouldn't go away. He says CW contest entries have grown in recent years. Thats good news for those advocating long term preservation

of the historic mode. (ARNewsline(tm))

CONVENTIONS: THE NAB HAM RADIO RECEPTION IN LAS VEGAS NV.

Its only a few weeks until the National Association of Broadcasters holds its 2004 gathering. One of the major social events that occurs at the NAB convention each year is the `Amateur Radio Reception'. This year will be no exception but for the first time ever this years `Ham Radio Reception' will be hosted by Heil Sound, Limited and its well known owners Bob, K9EID, and Sarah Heil. They would like to invite any and all amateur radio operators who will be in attendance at the NAB show to join them for this annual fun event.

Audio Only: Hear it at http://www.arnewsline.org
--

Bob and Sarah are promising a fun time. They are also planning appearances by some of their special friends as well as dozens of attendance prizes that will be given during the two hour reception. This includes several of the new Heil Poline performance microphones autographed by legendary Eagles guitarist Joe Walsh, WB6ACU.

This years NAB Ham Radio Reception takes place Wednesday April 21st, from 6 to 9 P.M. local time. The venue is the Las Vegas Hilton Hotel, Ballrom B. Of coarse, thats in Las Vegas, Nevada. Bob says all that is required to join in the festivities is to bring a smile and your NAB attendance badge for complimentary food and drink.

For more information please feel to contact Bob or Sarah at 618-257-3000 or by e-mail to bob@heilsound.com. The Heil's say that they hope to see you there. (ARNewsline(tm))

**

CONVENTIONS AND HAMFEST TRAVEL TIPS: TRY FLYING OR TAKE THE BUS

Talking of ham radio social events, its no secret that gasoline prices here in the United States at historically high levels, and the Department of Energy saying to expect prices to go a lot higher. As a result, many hams are asking the rhetorical question: Can I afford to go to a major hamfest or convention this year? Especially one of

the big ones like Dayton or NAB. The answer for the most part is yes, but a lot depends on where you live and how far you have to travel to that show. Amateur Radio Newsline's Bruce Tennant, K6PZW, explores some alternatives to driving your own car:

--

If your QTH is several hundred miles away from your favorite hamfest and you drive a gas guzzling vehicle like an S-U-V then you may think twice about going this year. That is, unless you can find an alternative to $3 or more for each gallon of gasoline. Well, there are currently two very good transportation buys available if you are willing to give up the luxury of a personal vehicle.

Lets take a centrally located city like Dallas, Texas. There's a big convention every year in the suburb of Arlington that draws exhibitors and attendees from all across the country. If you live in Houston and plan to attend, its about a 275 mile drive each way. In an S-U-V that gets 10 to 12 miles to a gallon at the projected $3 a gallon the drive one way will cost about $81 each way or $162 round trip. Compare that to the $89 round trip currently being offered between the two cities on Delta and Continental airlines. Want cheaper? Go greyhound, buy your ticket 7 days in advance and it will only cost you $58 round trip.

And what about Hamvention in Dayton Ohio? That's coming up in May. Well, its the same thing here. Using Chicago as your home, the trip is also about 275 miles each way. To drive will cost about the same but make your reservations now and fly out of Chicago's Midway airport and ATA will take you full circle for about $120. Go Greyhound and you can go full circle for only $82

Live further way. Say Los Angeles or San Francisco? Well, you can really get a bargain. Fly United Airlines out of Santa Ana California early in the morning with a connection in Chicago and you can go round trip for $255. By way of comparison, that same ticket a year ago went for about $100 more. And for you Northern California folks, you can do the trip for $283 out of San Jose on American Trans Air.

And the usual disclaimer here,. The prices we quoted we those showing on Sunday March 8th on several travel websites including greyhound.com and orbitz.com. Since the airlines are notorious for changing prices at a moments notice, these could be gone by the time this newscast goes to air.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Two final tips that most frequent flyers already know. First, book early. The best prices for flights are usually sold on-line months in advance. Also, keep an eye on all of the Internet based travel

discounters and check their prices daily. You never know when a flight or a bus ride to your favorite hamfest may be a lot less expensive than what it costs to drive your vehicle. And you won't have to hunt for a place to park, either. (ARNewsline(tm))

**

INTERNET SCAMS: ARRL AND RAC E-MAIL BEING SPOOFED

The ARRL and Radio Amateurs of Canada are warning their members and others about bogus or spoofed messages carrying ARRL.net or rac.ca suffixes. Both organizations say that they have been notifoed by people who have received e-mail messages alleging to be from the ARRL E-Mail Forwarding Service or directly from Radio Amateurs of Canada.

The senders of the e-mail encourage you to open the file or an attachment to the e-mail. Don't do it. These messages are false and are the result of one of the variants on a number of viruses now permeating the Internet. The attached file contains variations of worm viruses, MyDoom, Bagle and Netsky. Opening the file could result in your computer being infected. The bottom line: Delete the message and forget you ever got it. Your computer will be a lot safer that way. (ARRL, RAC)

**

HAM RADIO ADVENTURE: COMMUNICATORS NEEDED FOR CAVEING EXPEDITION

Gulf Coast United States, along with Caribbean, or South America base station operators are needed for communication on the ham bands with a scientific expedition. This, in July through August time frame.

The 60 day expedition will explore deep caves in the high Andes mountains and jungle in the western Amazon area of South America. Expedition access to the remote areas is via trekking on foot and pack animal. The expedition will use a solar and battery powered 20 Watt backpack transceiver. Antennas will be a wire dipole or vertical. A miniature notebook computer will be along for digital operations.

Communications will consist of position reports, some short messages with families of expedition members, and any possible emergency or medical messages. All operation will be non-commercial.

Operators with good base stations, efficient antennas and low noise locations are needed on the 40 through 15 meter amateur bands. The operations will use SSB, CW and a variety of digital modes. If you are interested, e-mail Bonnie Crystal, KQ6XA, at radioadventure@aol.com. (KC5FM, KQ6XA)

**

PUBLIC SERVICE: BAKER TO VEGAS FOOTRACE NEEDS YOUR HELP

Also in need of ham radio communicators is the famed Baker to Vegas Challenge Cup Relay race. Baker is Baker California and of coarse Vegas refers to Las Vegas, Nevada.

This year's foot race for teams from Law Enforcement Agencies takes place on April 24 th and 25, starting near Baker, traveling along State Route 127. The race then continues through radio show host Art Bell, W6OBB's hometown of Pahrump, Nevada and finishes up in Las Vegas.

For years, Amateur Radio has played an important role in the annual event. If you or your group is interested in helping with communications, please visit www.bakertovegas.com on the world-wide-web, to sign up. (Via e-mail)

**

RADIO LAW: CONGRESS ON ITS WAY TO INCVREASING INDECENCY PENALTIES AGAINST BROADCASTERS

Federal legislators are inching closer to increasing the penalties against broadcasters who permit indecent or obscene material to hit the public airwaves. This, as the House and Senate Commerce committees pass bills that would sharply boost fines of television and radio broadcasters who violate indecency regulations.

The U.S. House of Representatives measure increases fines to as much as $500,000 per violation from the current $27,500 per violation level. That version also contains a so-called three strikes provision that would require the FCC to hold a hearing to determine whether a broadcast license should be revoked after three violations take place. It also permits the FCC to weigh heftier penalties against the person who actually utters indecent material on the air as well as the ability to go after the network that broadcast the material in addition to the individual stations. Right now, the FCC can only fine the licensed station that aired the material and has limited ability to penalize the person who said it.

Current FCC rules limit indecent material presented in a patently offensive manner to late night hours, when children are less likely to be a part of the listening or viewing audience. In some past instances the broadcast standard has been applied to obsenity and indecency issues in private radio including the Amateur service.

Newsline attempted to find out if new and higher penalties directed by Congress might be applied to ham radio. We were told that at this point, the FCC's and Congressional actions are directed at the "broadcasters" and not at Amateur Radio. (Published news reports)

**

HAM RADIO BUSINESS: QRZ.COM HAS T1 TROUBLE

If you tried to access the QRZ.com website late on Thursday March 4th you probably found it down. The sites owner, Fred Lloyd, AA7BQ, reports that around 1800 UTC both of the dual T1 lines that supply the sites 3 Megabit feed to the Internet went down.

According to Lloyd, the sites network is supplier is Cable & Wireless and his location is served by two leased high-speed lines by the local phone company, Qwest. The Qwest lines connect the Arizona based QRZ.com servers to the Cable & Wireless location in downtown Phoenix.

About 2 hours after the outage was reported on Thursday, one of the lines was repaired and brought back up. For reasons unknown to Lloyd, the second T1 line has not been brought back up. Now, however, instead of a Qwest problem, it appears that the second line was intentionally disconnected by Cable & Wireless. Lloyd says that Cable & Wireless is currently pulling out of some of the less profitable market areas. Apparently, QRZ was mistakenly disconnected from the grid even though Lloyd had previously been assured that Cable & Wireless is not pulling out of his market. This put Q-R-Zeds back at 1.5 Megabits. That's the same speed that they were for years before the upgrade last December. (QRZ.com)

WORLDBEAT: MOTOROLA DONATES RADIOS TO VK EMERGENCY CORPS

Communication is set to improve for one of Australia's most remote indigenous Army Cadet Units following the donation of 24 state-of-the-art two way radio's by Motorola Australia. The company presented the radios destined for the Bamaga Cadet Unit in Far North Queensland to the Australian Parliamentary Secretary for the Minister of Defence , Fran Bailey , at a recent ceremony in Melbourne. Bailey said that she was delighted with the generous support shown by Motorola and acknowledged the contribution the company has made to the nations Indigenous Participation Project. The Bamaga Cadet Unit comprises Two Adult Officers and about 15 cadets. Bamaga is located the tip of Northern Queensland and is one of the most remote parts of Australia. (Q-News)

**

WORLDBEAT: TOWARD RESOLVING THE MEXICO - US 560, 780 & 920 KHZ BORDER SITUATIONS

An update on the radio border war developing between Mexico and the United States as we reported a few weeks ago. According to Joseph Berring in a letter to the CGC Communicator, the alleged problems caused by the Mexican broadcasters on 560, 780 and 920 kHz has become a top priority for both the U.S. FCC and the State Dept. as well as for the Mexican Administration.

According to Berring, top U.S. officials recently met with their Mexican counterparts in Mexico City. Berring observes that despite the controversy and problems that have arisen, Mexico's position has been very clear and unwavering. That being existing bilateral agreements are valid and they have not been violated. Additionally, Mexico seems to have some complaints of its own regarding U.S. stations.

The United States position is obviously a bit different. Not only does the US administration feel that there are clear violations, but that there are specific sidebar agreements dating as far back as 1996 that address the issues at hand.

Berring, who is a consultant on United States and Mexico border issues says to stay tuned. It should prove interesting. (CGC)

**

WORLDBEAT: AN ECUADOR DIPLOMA FOR YOU

A new Republic of Ecuador "Equatorial Line Diploma" for contacting stations at a latitude of zero degrees is being issued by the DX-TA-SEA DX CLUB, This multicolored certificate is awarded to Amateur Radio Operators and Short Wave Listeners for confirming contacts with the 20 different Ecuadorean HC and HD prefix areas. This award was developed to recognize past Amateur Radio activities from Ecuador. More information is available from Dr. Rick Dorsch, NE8Z, P.O. BOX 616, Hamburg Michigan. The zipcode is 48139. (NE8Z)

**

WORLDBEAT: SOTA EXPANDS TO GERMANY

According to the RSGB, the 'Summits on the Air' - or 'SOTA' - awards program has announced that the Alpine region of Germany is the latest geographic area embrace this awards project.

The Alpine SOTA program began operation on March 1st and is already being heralded as a success. The parent 'Summits on the Air' program began in 2002 . Since then there have been over 2000 hilltop activations and 15,000 contacts made. (GB2RS)

**

DX

In D-X, word that GM4YXI, is active portable 9M2 from Kuala Lumpur through the 29th of March. He also plans to operate from one or two

Islands On The Air island groups. Look for him on 20, 17 and 15 metres and maybe 12 and 10 metres CW and SSB. (GB2RS)

And PA3GIO will be active slash HI9 from the Dominican Republic through March 18th. Look for his signal on 80 through 10 meter SSB. (GB2RS)

**

THAT FINAL ITEM: TRANSMITTING DATA FROM MARS - AND CONSERVING ENERGY

And finally this week, were you aware that the pair of Mars Rovers now exploring the red planet actually have two ways to send data back to Earth? They can send it direct or indirect. Bill Pasternak, WA6ITF, has more:

--

As you might expect, direct entails using the rovers own high-powered microwave systems and using up a lot of very precious power reserves. Kind of like making a long distance contact on 2 meter FM simplex. You can do it but you need high power and a very directional antenna.

The indirect method uses low-powered UHF links to relay the data to orbiting satellites. These satellites then use their high-powered transmitters to beam the data back to scientists. Thats not much diferent than working a long distance on 2 meters, but doing it with an H-T through your favorite repeater.

To save energy on the solar powered rovers, the UHF relay method is preferred. As of February 18th, the two rovers had sent 10 billion bits of data from Mars to Earth. Of this, only 18% of that data was transmitted directly. The rest was relayed through the Mars Odyssey and Mars Global Surveyor satellites.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

My point exactly.

>Additionally, local nuisance laws are NOT applicable to authorized radio
>transmissions per applicable FCC rules.

There is no federal law that exempts a licensed radio operator from other violations he makes in the operation of his station. Such violations may include, but not limited to, causing a nuisance, trespassing, local noise ordinances, construction/building code violations, etc, etc.

>40+ years I have never heard of a single successful case of
>local nuisance laws being used against a ham station.

Nor have I, but I do know of at least two cases where radio operators were sucessfully sued in civil court for causing a nuisance. The articles didn't state whether those operators were licensed or not. But since they weren't prosecuted for violating federal laws, the issue of licensure is moot, and therefore a ham can indeed be held responsible under local laws for causing a nuisance. I'll even bet you that it has happened already, because there sure are a lot of high-and-mighty hams who think that the feds are going to come running to protect their sorry asses if they so much as get a speeding ticket while jawing on their mobile. Fortunately, it just doesn't work that way, Bill.

And now I'll ask -you- if you can provide one case where a ham was excused from violating a local law because he was licensed.

Please provide an example which you think would hold up
in court.

> trespassing,

Examples please. How is operating a legal CB station in your
own home or even in a vehicle in any way an act of trespass.

> local noise ordinances,

Again, examples please. Unless the CB (or ham) has a speaker
blaring into the neighborhood, just how would legal operation
of a CB or ham station fall under any local noise ordinance?

> construction/building code violations, etc, etc.

Again, examples please. Yes, one can be in violation
of building or construction codes for certain antenna
installations if done without a permit, but evn so, that
would just cause a CBer or ham to eliminate the code
violation. Having done so (i.e. elimated the code violation)
then the CBer or ham could certainly install an antenna
in accordance to local codes or file for the appropriate
permits and, if applicable, apply for a variance (e.g.
to put up a tower above locally permitted height).

How about some facts as to those cases.

> The articles didn't
> state whether those operators were licensed or not.

Anyone can be sued. What was the basis of the civil nuisance
complaint? More to the point,
if it is a "civil" suit, then it is NOT a violation of local ordinances
under municipal law.

> But since they weren't
> prosecuted for violating federal laws,

> the issue of licensure is moot, and

You keep saying that but offer not one concrete example..
or even a hypothetical case to discuss.

> I'll even bet you that it has happened

> a lot of high-and-mighty hams who
> think that the feds are going to come running
> to protect their sorry asses if they so
> much as get a speeding ticket while
> jawing on their mobile.

I truly doubt your speeding ticket analogy. BUT...
let's use that for the moment. Speeding is NOT
a radio operation related charge and has ZERO
relationship to this discussion.

> Fortunately, it just doesn't work that way, Bill.

Fortunately? In actuality, you have yet
to show even one factual example.

> And now I'll ask -you- if you can provide
> one case where a ham was excused from
> violating a local law because he was licensed.

Sorry, that's not my position to prove. The question
is raised from the point of IF and WHEN any ham
was even charged under any of the local
ordinances you argue on a general basis...i.e nuisance
laws, noise ordinances, trespass, etc.

Again, even for construction code or building code
violations, such violations are NOT for operation,
but rather for construction (usually, if not always,
for some sort of antenna or tower installation).

Cheers,
Bill K2UNK

To begin with, I quoted a newspaper article about a case here in Spokane:

http://groups.google.com/groups?hl=en&lr=&ie=UTF-8&safe=off&selm=3ade1b9d.77554%40news.cet.com

And Twisty was nice enough to find a reference to another case on the other side of the state. I read the article after it was posted, but that was a couple years ago and you will have to search the referenced newpaper's archives to find it again:

http://groups.google.com/groups?hl=en&lr=&ie=UTF-8&safe=off&selm=QE9h6.153%24L35.40420%40news.uswest.net

That's two cases from one state. I'm sure there are more.

>if it is a "civil" suit, then it is NOT a violation of local ordinances
>under municipal law.

Now where did you get that idea? You can't file a complaint, civil OR criminal, unless there is an alleged violation of law, and it must be a law under which a remedy can be granted. Otherwise it gets tossed out of court.

>> And now I'll ask -you- if you can provide
>> one case where a ham was excused from
>> violating a local law because he was licensed.
>
>Sorry, that's not my position to prove.

Too bad, because that was an easy one. As it turns out there -is- a federal law that preempts local laws from dealing with RFI-related issues, and it has been exercised many times. Instead of being defensively lazy you could have done a quick search on google and found the answer. Regardless.....

The FCC may have declared that any state or local RFI regulations are preempted by federal regs, but when the FCC won't get off it's lazy ass to enforce their own laws, that leaves victims with no remedy against asshole hams. Now any judge has the right to make any decision he/she deems legal and appropriate. Usually the courts side with the FCC, but evidently there are a few cases (such as the ones above) where they don't. And we all know (or should know) the legal process by now: If the decision should be against the FCC, the decision is not void just because a law exists which contradicts the decision. The case must go through the process of adjudication; i.e, the appeals courts. Most such cases can be appealed, one exception being Small Claims Courts in WA which doesn't allow appeals, only trials de novo. But on appeal there arises another thorn in the bush -- the FCC suddenly gets allergic to higher courts whenever there is a case that makes a challenge to their authority, especially to the constitutionality

of their laws. So if a case ever looks like it might end with a ruling that the FCC's preemptions are in conflict with the civil rights of the general public (as would be the case with a public nuisance) you can bet that the case will be quickly and quietly dropped. It has happened before and it will happen again.

To be blunt: as long as fat, lazy hams keep causing interference under the umbrella of preemption, the probability increases that they will find their defense is no longer valid. It may happen case by case or in one fell swoop, but it -will- happen. I believe this for three reasons: First, because there is an increasing number of people that are fed up with the FCC's inattention to RFI complaints; Second, because hams are becoming increasingly cocky about their cloak of federal protection; and Third, after doing a quick search on google I found several current statutes where RFI is declared illegal in spite of the FCC's preemption, so it looks like the FCC's fear tactics aren't working anymore. If the FCC doesn't start enforcing violations by otherwise legal hams they run the risk of forfeiting some jurisdiction to lower authorities as they did with HR2346.

So believe what you want about the law -- the facts are that people aren't going to give up their entertainment, electronic conveniences and basic communications devices just because some smart-ass ham thinks the feds will always be there to defend him even when he's too lazy to clean up his signal. They won't. And they won't because this country is governed by the majority of the people, not a few holier-than-thou hams.

> Well, there you have it: They did not understand their communications needs.

And they really don't have to. Problem is that so many people think
that they are "high-tech" when they use a cell phone or surf the web,
when in truth, they don't know one thing about what they are doing. Ask
the average person about how a cell phone works, or how that computer
works, and odds are they will draw a blank.

That's okay, as knowledge isn't mandated, but if they try to put together a comm support network with the level of knowledge that they *do* have, they are more likely than not to suffer failure. In other words, they are reaching a conclusion with insufficient thought. My thoughts are to learn to do it correctly, or allow someone that *does* know to do their job.
